Automotive Catalogue

The ultimate clamping technology

Innovation begins with Research and Development and extends to industrial processes and business activities, with the ultimate aim of total customer satisfaction.

Pneumax

Smart Technologies and Human Competence

Founded in 1976, **PNEUMAX S.p.A.** is today one of the leading, international manufacturers of components and systems for industrial automation. It is at the fore front of a group of 23 companies, with over 730 employees worldwide.

Ongoing investment in research and development has allowed **Pneumax** to continually expand its range of standard products and customised solutions, adding to the well-established pneumatic technology, a range of electric drive actuators and fluid control components.

INDUSTRIAL AUTOMATION

**PROCESS
AUTOMATION****AUTOMOTIVE**

The ability to provide various technologies and solutions for our clients' applications is the main objective of our company, making us the ideal strategic partner.

What defines us is "**Pneumax Business Attitude**", born out of the capacity to combine industry sectors, technology and our application skills via client collaboration with our business sector and product sector specialists. This represents the main distinguishing factor of what Pneumax offers.

The Automotive division

Product development

The Automotive division of Pneumax **designs and manufactures a complete range of products dedicated to the production lines of the automotive field, focusing on Body in White applications.**

Pneumax offers a comprehensive range of clamping units, pivot units, pin packages as well as grippers and complete multi-axis positioning systems.

Developed by a team of specialized technicians, the product is designed to ensure maximum reliability, precision and repeatability in compliance with the latest international mounting standards.

Particular attention has been paid to energy efficiency which through patented designs provides the largest energy saving solutions available in this market.

Every stage of manufacturing and product testing is carried within our specially equipped departments at our headquarters in Lurano (BG).

The worldwide presence of Pneumax ensures optimized and coordinated project management: the highest level of service is provided to all of our international customers.

Market requirement evaluation and product specs definition by product management. The project team analyzes the technical feasibility and sets a general timeline.

1 CONCEPT

2 PROTOTYPING

After a **structural mechanics simulation analysis**, the R&D team prepares a CAD model which is used with a **3 axis printing-moulding machine** to manufacture the first prototypal batches.

Electronic components are developed and manufactured **in-house** by Pneumax to be integrated in any system or as interface to any protocol.

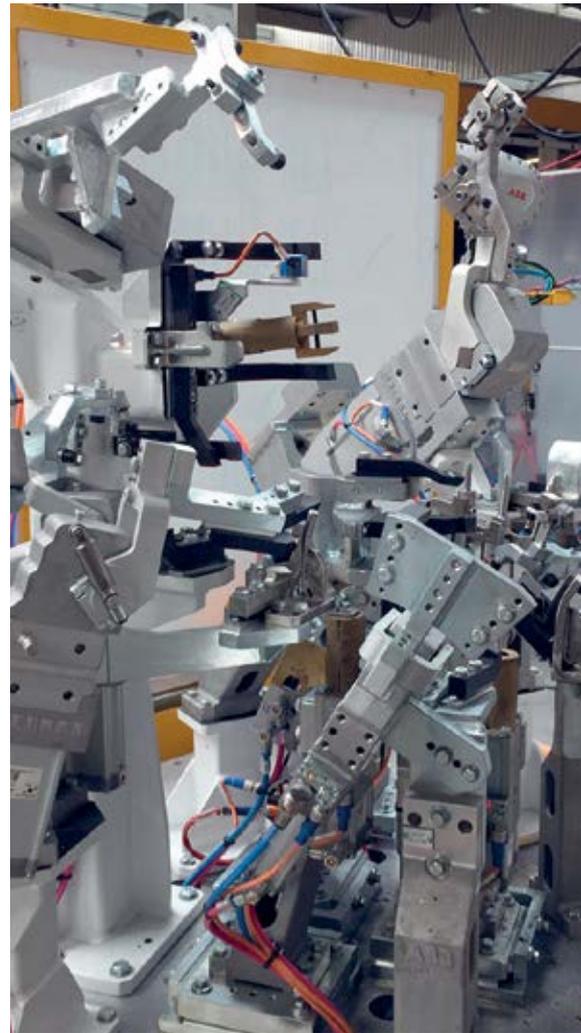

3 ELECTRONICS INTEGRATION

4 FMEA

The first close-to-series samples are machined, using the **latest generation machinery**. The first **FMEA** is prepared.

Life test and approval.
The products are subjected to **functional, performance, temperature tests** for millions of cycles.

The industrialization team together with the technical department develop any **specific equipment and tool required**. Suppliers' evaluation is accomplished.

5

EVALUATION AND INSPECTION

6

ENGINEERING

The engineering department evaluates and adopts the most suitable manufacturing technology and assembly procedure to implement, using **3D simulation programs**.

7

PRODUCT INDUSTRIALIZATION

8

PILOT SERIES RELEASE AND PRODUCT AUDIT

Verification and validation that the product meets the requirements.

Product range

Automotive series

Our clamping series features the widest range in clamping moment & stepless adjustable opening in the industry.

Extensive Product Range covering **Clamping, Locating, Handling, Pivoting** functions, with all options required in the **BIW** production lines.

Clamping

Stepless adjustment of the opening angle with the quickest set-up time in the market.

The lightest and most compact

Patented

The lightest and most compact

An internal hard stop and a rigid linkage secure a **precise and backlash-free positioning thus enhancing the repeatability of the closed position.**

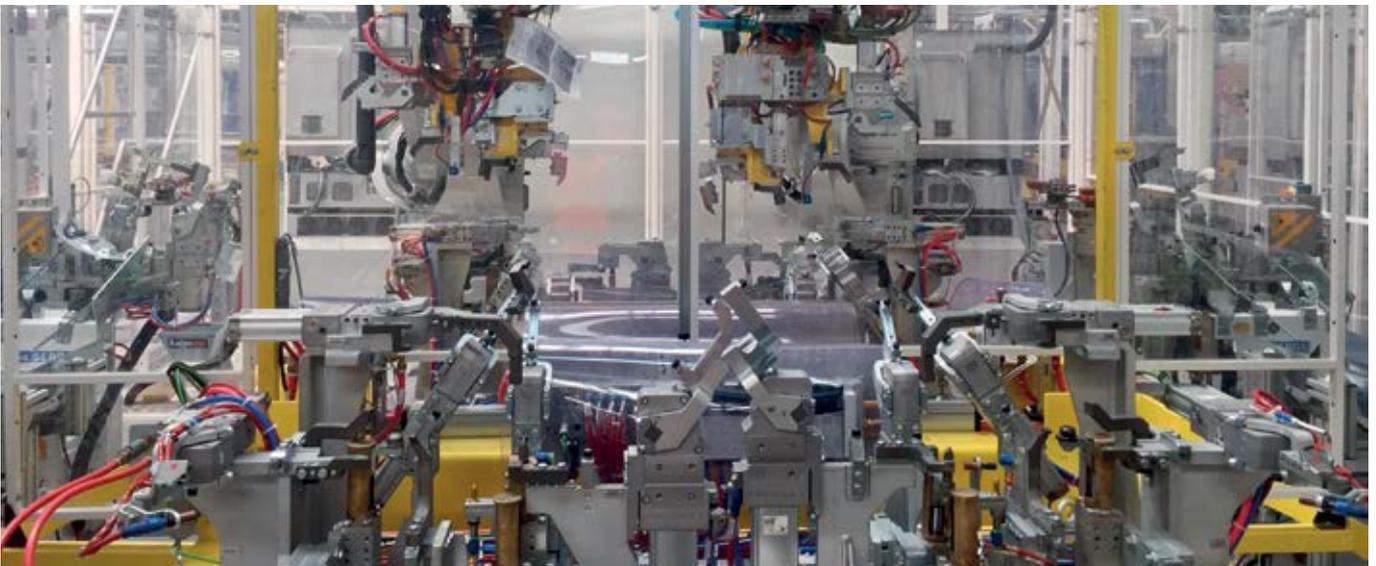

The toggle mechanism is fully encapsulated within the lightweight aluminum body construction.

Superior needle roller bearings with joints for high load capacity and protection. Protection against any contamination of weld spatter, welding debris and coolants enabling clamps to operate continuously in extreme environments.

3 MLN
CYCLES

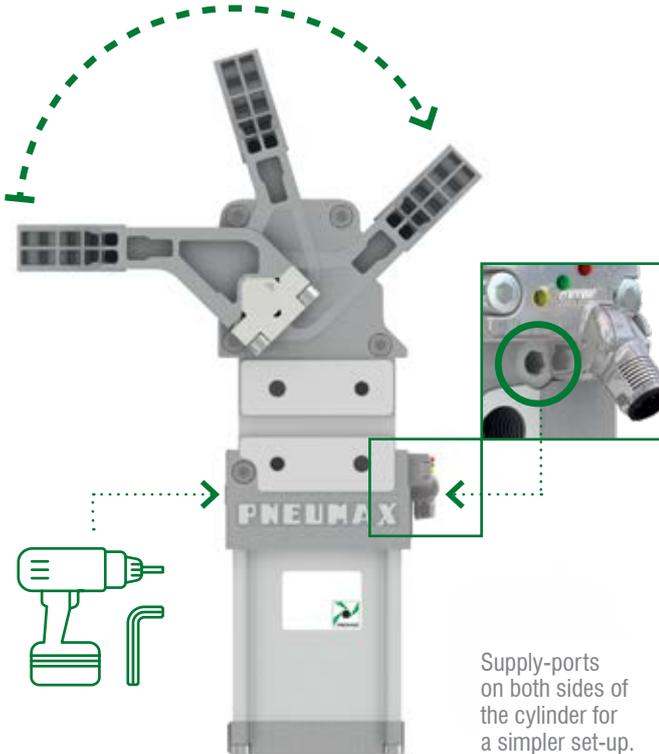

Maximum structural resistance and fatigue strength.

AR system to maintain the load in the open position without air supply.

Stepless opening angle adjustment

Easily accessible and simple field adjustment from the rear or front side of the device, with an Allen wrench or a screw gun. A built-in, single-touch opening adjustment, with external access through a recessed detent: no disassembly is ever required.

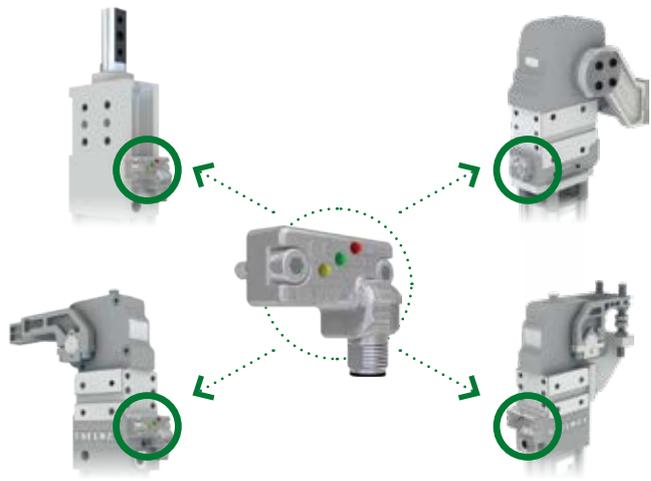

Reliable opening adjustment

The opening position is repeatable thanks to an **anti-rotation device** integrated in the piston. The arm selection remains secure. A **retain mechanism** secures the adjustment tool in its seat and prevents the Allen wrench to fall down during the adjustment procedure.

Electronic sensor

One only sensor is used for all products, all sizes and series. EMC compliance to EN 60947-5-2:2007+A1:2012. Swivel connector 0°-90°

Efficient cushioning system

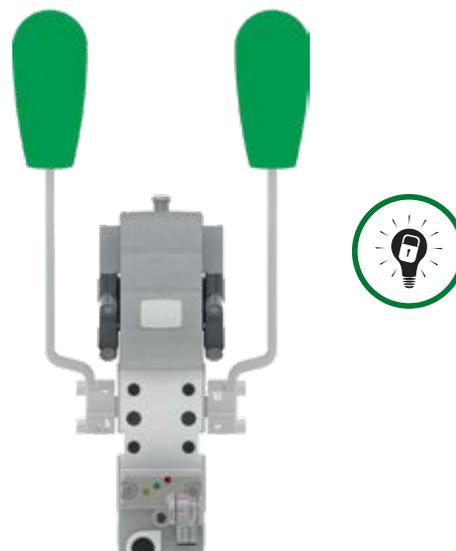

- Shorter cycle time
- Longer lifetime
- Less noise
- Less abrupt movements
no slamming - no shocks
- Less impact forces generated
by dynamic stress factor

Robust & versatile hand lever

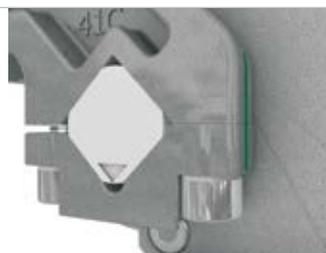

Dual shaft output

Sturdy & durable solution with extremely compact and flat dimensions. The integrated manual operation guarantees that the toggle joint is engaged and requires a very low force to reach the irreversible condition.

Patented

Optimal clamping arm-shaft connection and arm structure

C1-Series

Pneumatic and manual power clamps International mount

INTERNATIONAL
MOUNT

Pneumax clamps' series have all been developed with a modern and compact design which goes towards **enhancing the operational performances**, such as the cycle time, combined with a very limited total weight without compromising their **strength** and **resistance**.

Thanks to the material chosen for the housings and the clamping arms, a high quality aluminum alloy, as well as due to the compact design of the cylinder and the housings, to minimize any interfering contours, Pneumax devices are **the lightest and most compact power clamps in the market**.

CLAMPING

Technical features

Manual release button to open the linkage when air pressure is removed during setup. **Pneumatic ports on both sides** of the cylinder.

Operating features

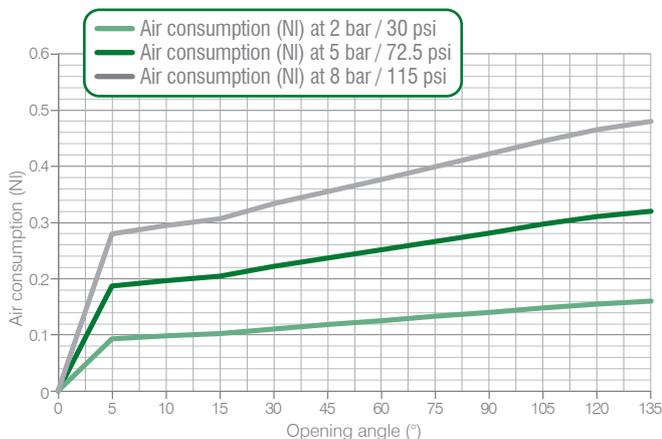

Operating pressure	from 2 to 8 bar / from 30 to 115 psi
Lubrication	all the devices are lubricated for life at the factory. Inline air lubrication isn't required

C2-Series

Pneumatic power clamps conforming to the NAAMS Standard

Pneumax clamps' series have all been developed with a modern and compact design which goes towards **enhancing the operational performances**, such as the cycle time, combined with a very limited total weight without compromising their **strength** and **resistance**.

CLAMPING

Technical features

Manual release button to open the linkage when air pressure is removed during setup. **Pneumatic ports on both sides** of the cylinder.

Operating features

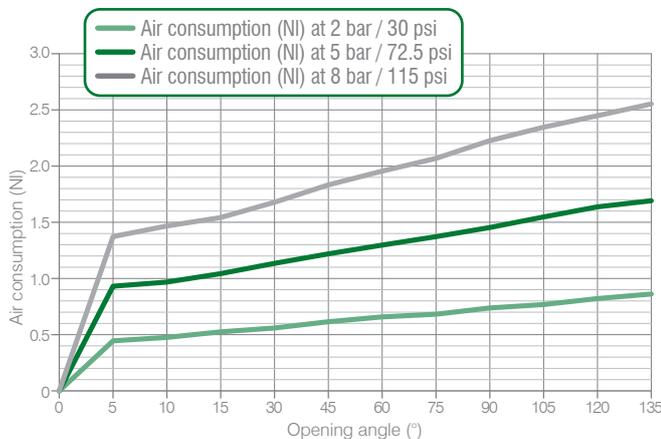

Operating pressure	from 2 to 8 bar / from 30 to 115 psi
Lubrication	all the devices are lubricated for life at the factory. Inline air lubrication isn't required

Functional charts

Size 50 mm

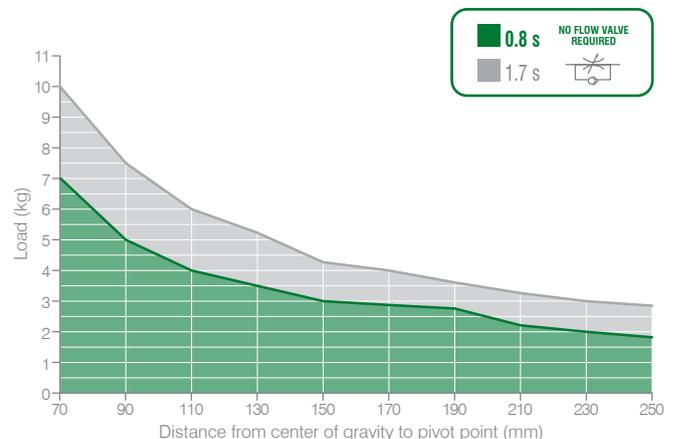

- Air consumption**

Air consumption for complete cycle (opening and closing)
REV. 00 - 16/06/2015

- Tooling weight chart**

5 bar operating pressure – 135° opening angle
REV. 00 - 16/06/2015

- Clamping moment (at 5 bar / 72.5 psi)**

185 N m / 136,44 lb-ft

- Holding moment**

800 N m / 590,04 lb-ft

The above data are meant for correct working conditions of the clamp with the same performance level during its life time. For applications which exceed the above data, please contact our sales representatives.

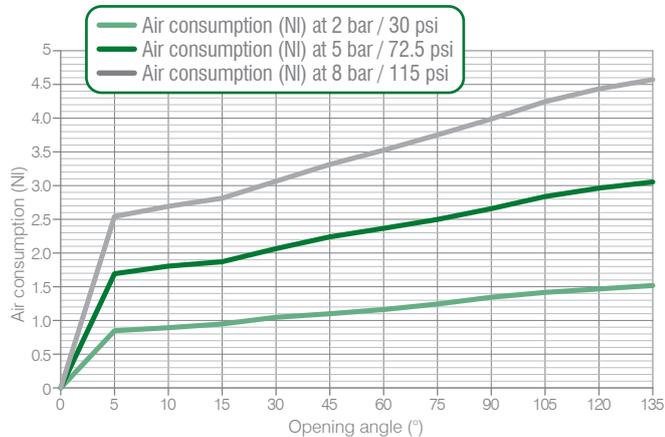

Size 63 mm

CLAMPING

- Air consumption**

Air consumption for complete cycle (opening and closing)

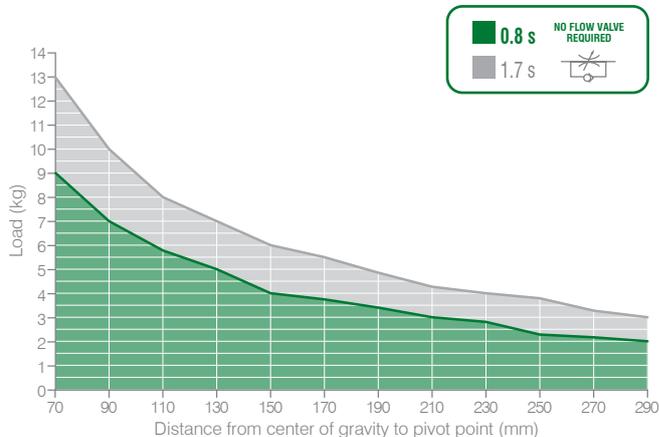

REV. 00 - 17/06/2015

- Tooling weight chart**

5 bar operating pressure – 135° opening angle

REV. 00 - 17/06/2015

- Clamping moment (at 5 bar / 72.5 psi)**

390 N m / 287,64 lb-ft

- Holding moment**

1.500 N m / 1.106,34 lb-ft

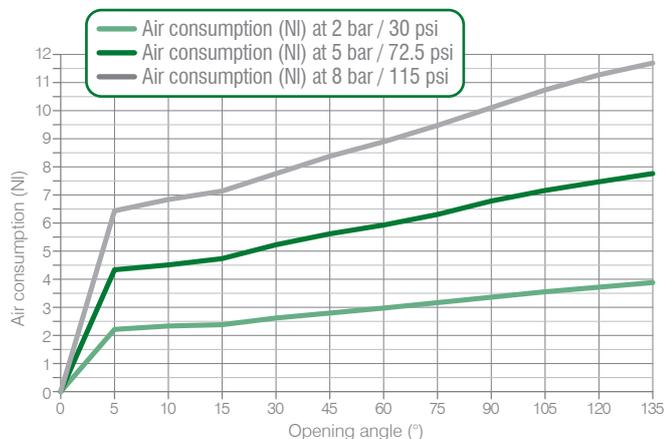

The above data are meant for correct working conditions of the clamp with the same performance level during its life time. For applications which exceed the above data, please contact our sales representatives.

Size 80 mm

- Air consumption**

Air consumption for complete cycle (opening and closing)

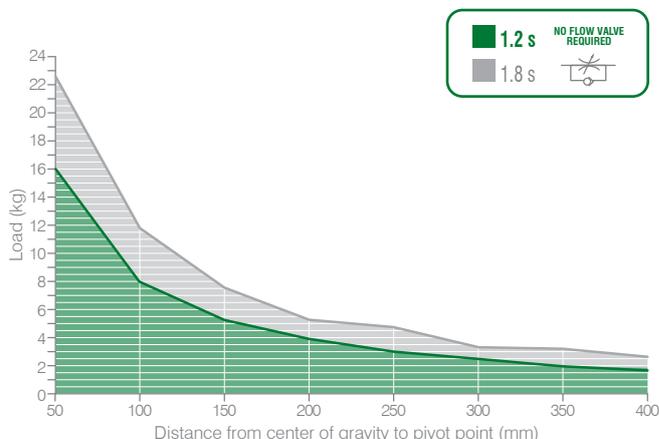

REV. 00 - 29/05/2015

- Tooling weight chart**

5 bar operating pressure – 135° opening angle

REV. 00 - 29/05/2016

- Clamping moment (at 5 bar / 72.5 psi)**

850 N m / 626,92 lb-ft

- Holding moment**

2.500 N m / 1.843,90 lb-ft

The above data are meant for correct working conditions of the clamp with the same performance level during its life time. For applications which exceed the above data, please contact our sales representatives.

C3 and C4-Series

New integrated hold open device

It securely holds the clamp in its open position in case of air loss

INTERNATIONAL
MOUNT

The new integrated hold open device is a reliable solution even for applications with considerable **axial load** on the **clamping arm**.

It allows for a smooth and controlled restart of the cycle.

Compact overall dimensions.

Available for all clamps' mountings (logo International mount and logo NAAMS). Protection against external impacts, dust and welding debris.

Patented

CLAMPING

Technical features

Manual release button to open the linkage when air pressure is removed during setup. **Pneumatic ports on both sides** of the cylinder.

Operating features

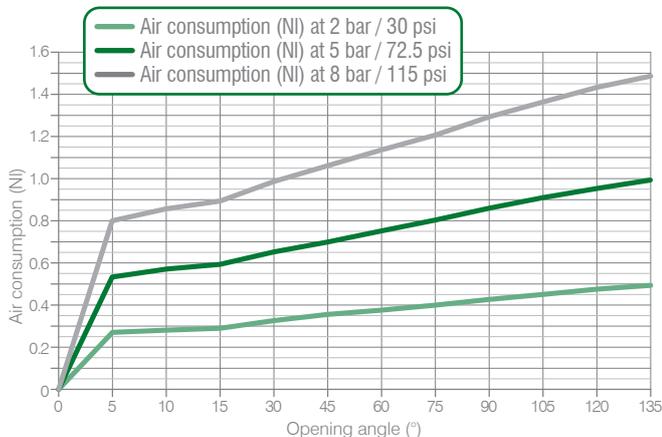

Operating pressure	from 2 to 8 bar / from 30 to 115 psi
Lubrication	all the devices are lubricated for life at the factory. Inline air lubrication isn't required
High retention	make sure to supply air to the opposite side of the cylinder before switching the valve

Integrated mechanism

Without air, a spring pushes a steel locking ring in a groove machined in the piston rod termination and prevents it from moving.

On the opposite side, a pneumatic piston, when activated, pushes the steel locking ring and releases the piston.

SINGLE EFFECT

HE1-Series

High Efficiency power clamps International mount

INTERNATIONAL
MOUNT

Air consumption saving up to 41%

The perfect combination between **functionality** and **efficiency**: same clamping moment, same holding moment, same overall and functional dimensions, same load capacity of a standard clamp with International and NAAMS mounts available.

Patented

HE2-Series

High efficiency power clamps conforming to the NAAMS Standard

GLOBAL STANDARD COMPONENTS
NAAMS

Air consumption saving up to 41%

The perfect combination between **functionality** and **efficiency**: same clamping moment, same holding moment, same overall and functional dimensions, same load capacity of a standard clamp with International and NAAMS mounts available.

CLAMPING

Patented

Technical features

Manual release button to open the linkage when air pressure is removed during setup. **Pneumatic ports on both sides** of the cylinder.

Operating features

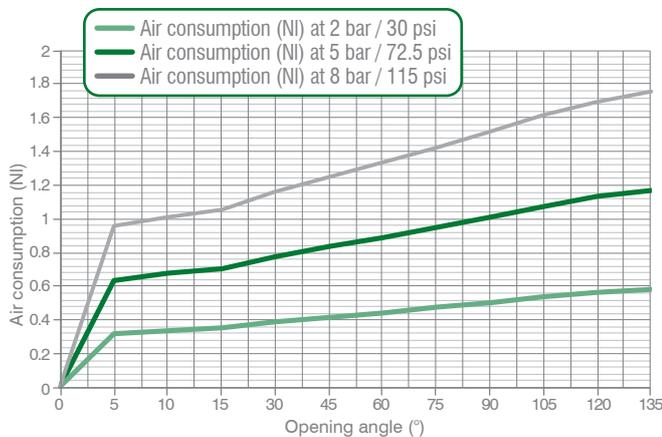

Operating pressure	from 2 to 8 bar / from 30 to 115 psi
Lubrication	all the devices are lubricated for life at the factory. Inline air lubrication isn't required

Power clamps for double workpiece identification

International mount - Naams mount

For critical applications, where it is required to identify the unwilling presence of two metal sheets in the process and to avoid their clamping. This built-in device **allows a reliable double workpiece identification.**

The below end cap shows an **adjustment screw**: by loosening the screw, the inlet pressure is adjusted, i.e. reduced to the minimum required to guarantee the **clamping of a single workpiece**, not of two metal sheets. The toggle linkage is therefore prevented from engaging (no toggle lock) and consequently the sensor will not detect the closed position and will signal the anomaly. Once the clamp is properly adjusted from the below end cap screw, to be able to clamp a single workpiece, **it will be able to detect the false condition in case a second workpiece is inadvertently set on the tooling.**

Instructions

The adjustment cannot be performed without air.

- 1 Install the clamp on the fixture by using all 4 screws and dowels. If mounted on the side, use the key slot.
- 2 Check the shimming and make sure that that with 5/ 5.5 bars the clamp is operating smoothly (0.3 or less shimming is optimal).
- 3 Place the workpiece and clamp it. Make sure you get the red led signal for closed position.
- 4 Open the clamp.
- 5 Use, further to the workpiece, a thickness gauge (a feeler or a shim) whose thickness is half the thickness of the workpiece.
- 6 Close the clamp and tighten the screw slightly. Operate the clamp and check if the closed position signal is lost. In this way, the pressure is reduced and the cylinder won't get enough push force to engage the toggle linkage.
- 7 Open and close a few times, then double check with two workpieces and no red led light will be on, in such a condition.
- 8 If ok, tighten the bolt behind the screw to avoid its loosening.

Technical features

Manual release button to open the linkage when air pressure is removed during setup. **Pneumatic ports on both sides** of the cylinder.

Operating features

Operating pressure from 2 to 8 bar / from 30 to 115 psi

Lubrication all the devices are lubricated for life at the factory. Inline air lubrication isn't required

CB-Series

Power clamp with double arm

- Stepless adjustable opening angle
- Toggle lock mechanism
- Unlock manual override > in case of air loss the clamp can be opened manually
- Pneumatic ports on both sides of the cylinder
- Extremely compact dimensions
- 4-sided mounting pattern

CLAMPING

Technical features

Manual release button to open the linkage when air pressure is removed during setup. **Pneumatic ports on both sides** of the cylinder.

Operating features

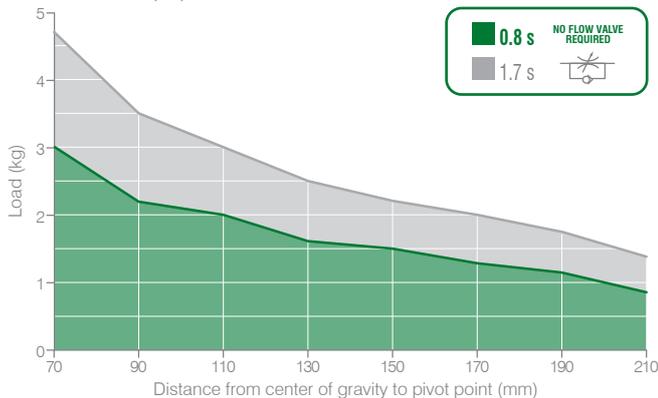

Operating pressure	from 2 to 8 bar / from 30 to 115 psi
Lubrication	all the devices are lubricated for life at the factory. Inline air lubrication isn't required

HC-Series

Hydraulic clamps

Hydraulic power clamps with **fully-enclosed mechanism**. Maximum mechanical advantage and compact dimensions. Heavy-duty sealed clamps provide superior clamping forces in **harsh welding environments**. Efficient and consistent for repetitive production operations. Sturdy toggle-linkage mechanism and industry-proven position monitoring: the sensor detects the actual linkage condition. **High performance and maintenance-free bushings**.

Technical features

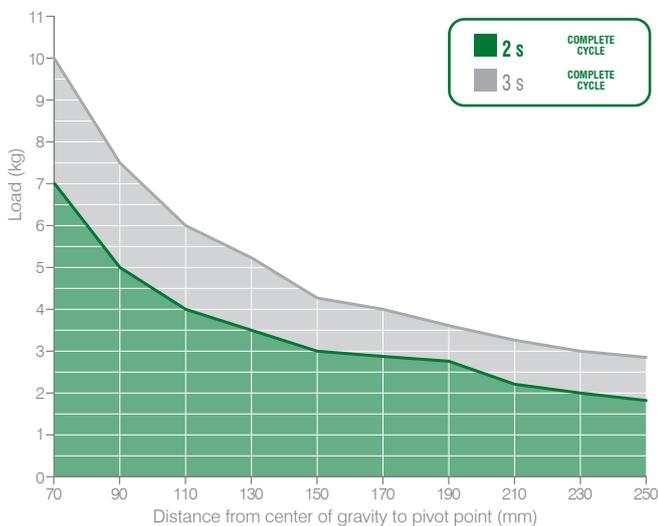

90° opening angle

Operating features

Operating pressure	Nominal pressure 75 bar; max pressure 150 bar
Fluid temperature	-20 °C ÷ + 80°C
Fluid	Hydraulic mineral oil
Weight	5,5 Kg

Functional charts

• Tooling weight chart

• Clamping moment 580 N m at 75 bar

The above data are meant for correct working conditions of the clamp with the same performance level during its life time. For applications which exceed the above data, please contact our sales representatives.

Make sure that the opening movement is cushioned through flow adjusters.

Clamping

Quick installation guide

CLAMPING

Caution

Any maintenance operation may only be carried out by qualified and authorized personnel. For any reason, do not reach into the pivoting range of the clamping arms, when the clamps are in operation. Disconnect and lock out pneumatic and electric supply lines before operating on or around clamps.

Functional description

When operated, the pneumatic cylinder acts on an integrated toggle mechanism, which triggers the pivoting movement of the clamping arms.

The clamp is warranted for 3 mln cycles in correct operating conditions

No lubrication.

No preventive maintenance.

External cleaning with non-corrosive detergents is required: cleaning interval depends on the ambient conditions as well as on the frequency of use.

Clamp installation to the tool

The clamp can be installed by one of its four mounting surfaces, using dowels and screws according to its datasheet. The tightening torques to be set are:

M5	5 N m / 3.68 lb-ft
M6	10 N m / 7.37 lb-ft
M8	25 N m / 18.43 lb-ft
M10	35 N m / 25.81 lb-ft
M12	50 N m / 36.87 lb-ft

Use the key support surfaces, where available.
Always use all the bores on the mounting pattern.

A worksheet for the right sizing of the clamp is available upon request. Visit our website for technical documents

<http://automotive.pneumax.it/>

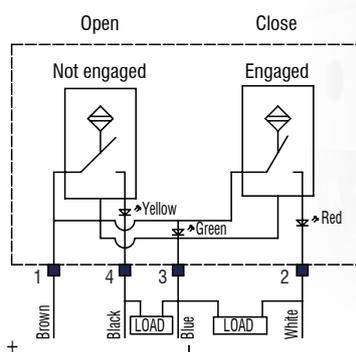

Pressure operating range: from 2 to 8 bar/ from 30 to 115 psi.
Inline lubrication isn't required: if lubricated air is used, it is necessary to continue using lubricated air, as the oil in it may have removed the basic lubrication in the device.

Electronic sensor

ES001 is used for all clamps' sizes and series. Adjustment of the connector: unscrew the tightening screw and set the connector in the required position, then secure the screw with 5 N m / 3.68 lb-ft.

Technical features

Operating voltage	10-30 VDC
Voltage drop	≤ 2 V
Load current	≤ 100 mA
Current consumption	≤ 30 mA
Short-circuit protection	protected
Protection rating	IP68
Operating temperature	-0 °C +50 °C
Storage temperature	-25 °C +60 °C
Electromagnetic compatibility	EN 60947-5-2:2007 + A1:2012
Power supply indication	green LED
Open position indication	yellow LED
Closed position indication	red LED
Digital output type	PNP

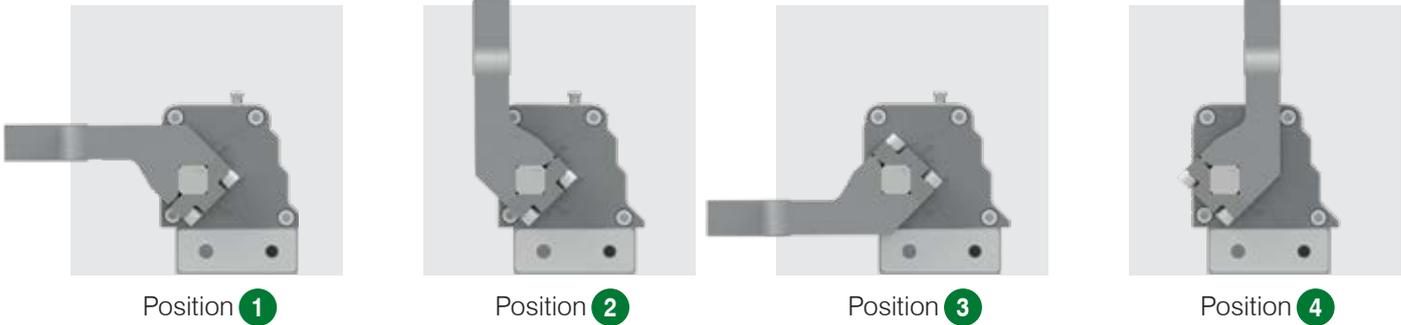

Simplified diagram (PNP)

To replace the sensor, remove the M5 screw and assemble a new one by tightening the same screw with 5 N m / 3.68 lb-ft.

Arm mount options

The above pictures show the closed position.

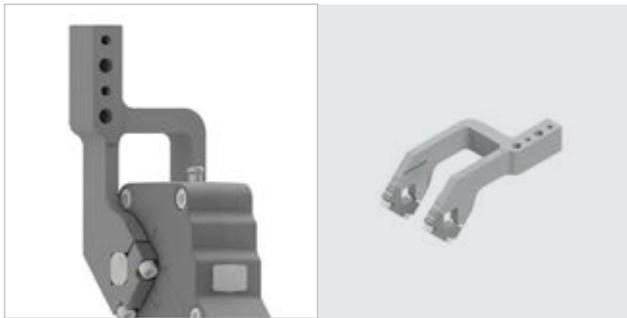

The max. opening angle according to the arm mount option is indicated on each clamp arm's datasheet. In order to achieve a right or left arm mount in configurations 2 or 3, the clamping arm should be rotated by 180°, therefore to achieve

C1P/HE1P __ 2A03 a right clamp arm is required, i.e. B/Q __ 02

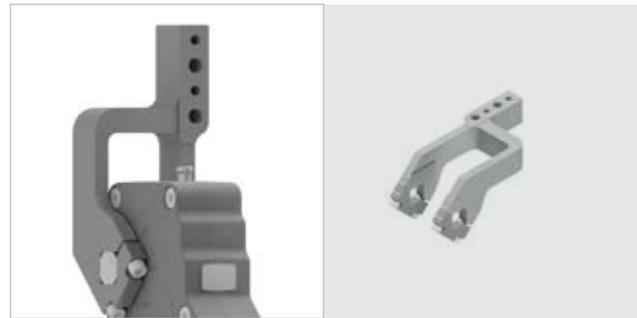

C1P/HE1P __ 2A02 a left clamp arm is required, i.e. B/Q __ 03

C1P/HE1P __ 2A05 a right clamp arm is required, i.e. B/Q __ 06

C1P/HE1P __ 2A06 a left clamp arm is required, i.e. B/Q __ 05

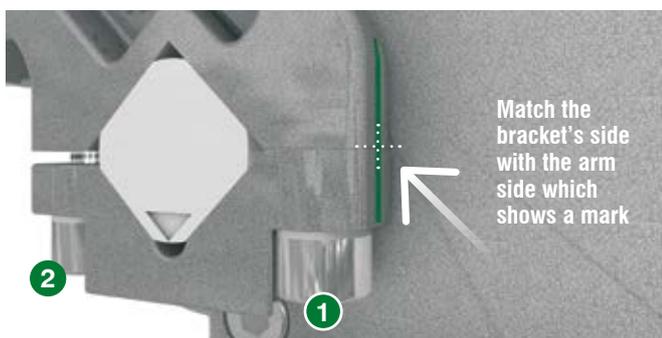

C1 __ __ 2A03 using a right __ 02 arm

C1 __ __ 2A02 using a left __ 03 arm

Clamping arm mount

The sides of the brackets have two different heights. Assemble the brackets to the side of the clamping arm, so that the surfaces, where the side mark has been machined on, will match. Secure, at first, the screw on the mark side **1** by setting the tightening torques indicated on the clamping arm datasheet, and leave no gap between the bracket and the arm. Then, secure the other screw **2**: in this case, due to the different length of the sides of the brackets, a gap between the same and the clamping arm will be noticed. Always use locking washers.

Handles with knobs for manual levers

RK7100/0015 Handle with green knob and bracket; D2 version for 25 and 32 mm bore clamps and manual pin packages RD250 and FD63

RK7100/0005 Handle with green knob and bracket; D1 version for 40 mm bore clamps

RK7100/0006 Handle with green knob and bracket; D2 version for 40 mm bore clamps

RK7100/0003 Handle with green knob and bracket; D1 version for 50 and 63 mm bore clamps

RK7100/0004 Handle with green knob and bracket; D2 version for 50 and 63 mm bore clamps

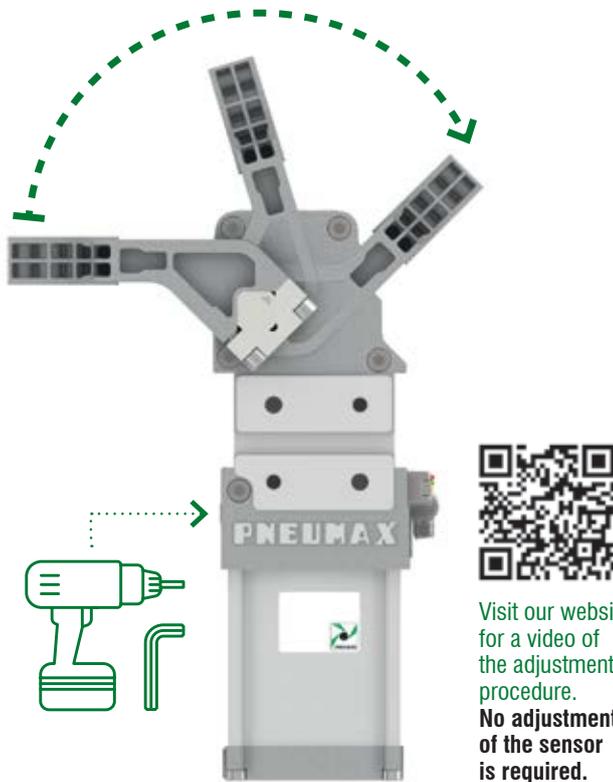

RK7100/0007 Handle with green knob and bracket; D2 version for 80 mm bore clamps

The levers' kits include handle knob, bracket and M5 x 16 screws. Tightening torque: 5 N m/ 3.68 lb-ft.

The handles can be installed on the left or on the right side of the clamps- all manual clamps show a dual output shaft.

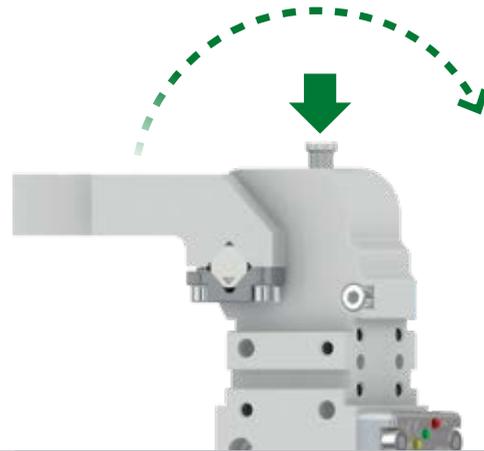

Opening angle adjustment

The clamping arm must be in the open position. Insert a 5 mm hexagonal flat Allen Wrench or a screw gun and adjust the opening position to the required opening angle.

Manual release button

To manually unlock the mechanism, hit the bolt with a rubber mallet. The linkage will automatically release itself from the over-centre position. To close the clamps during set-up operations, without air, use a screw gun or a flat Allen wrench to engage the adjustment means and adjust the clamp till 0° opening angle: the linkage will be toggle-locked as the manual release button is completely outside.

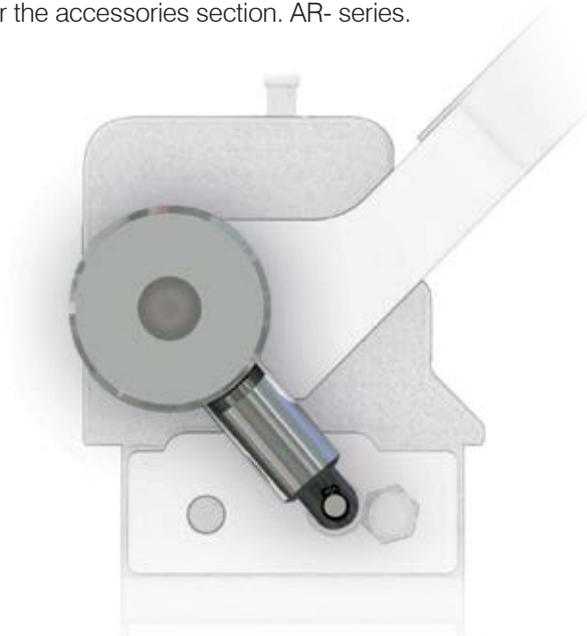

No need to disassemble the cylinder to rotate the ports' position

Supply-ports on both sides of the cylinder for a simpler set-up.

Auto-retaining device

For mounting installations, where the load is subject to gravity force and could move from the clamp opening position, an auto-retaining device could be used. Please refer to our website for the respective documentation, under the accessories section. AR- series.

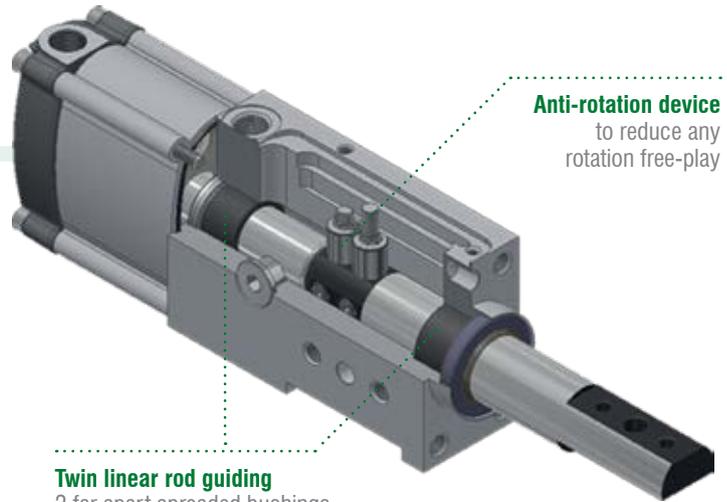

Shims and spacers

For an optimal setting of the clamping force, proceed as follows: place the NC blocks until contact is made with the workpiece, close the clamp and verify that the linkage is toggle-locked by checking that the release bolt is completely outside. Proceed by adding shims or spacers till the gap between the workpiece and the NC block is 0 mm, then add further shims so that the required clamping force is achieved. 0.3 mm shimming is the average interference recommended: please consider that the thickness of the shim to be chosen depends on the air pressure as well as on the clamping arm's length and clamp size. For any specific requirement, please contact our technical representatives at automotive@pneumaxspa.com.

Locating

High locating accuracy.
High protection against welding debris and corrosion.

Anti-rotation device
to reduce any rotation free-play

Twin linear rod guiding
2 far apart spreaded bushings limit any deflection and improve the pin package accuracy over a long period of time.

LOCATING

Extra-light products

High positioning accuracy level

Precise guiding through 2 far-apart spreaded bushings for an optimal support of the rods > twin piston rod guide

- Low deflection
- Efficient anti rotation mechanism

Long life built-in components in rust prevention

- No weld covers or bellows required
- Steel and brass rod scraper to prevent welding debris from entering the pin package
- Chrome rod coating as a protection against adhering weld sparks

High resistance to welding debris and corrosion

Anti-rotation system to reduce any rotation free-play

Locating products

LOCATING

Dual rods

- Extra-light products
- Short body length
- Clear design with user-friendly surfaces and no dirt or welding deposit traps

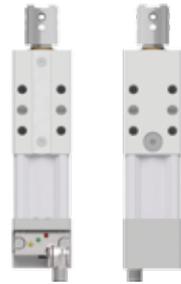

Nano pin packages

2-sided mounting option

Supply ports on 3 sides

Front
mount

Rear
mount

G ports
on 3 sides

High performance pin package

The heat generated from any welding process can cause a localized deformation in the workpiece when the metal cools, some parts could contract more than others, leaving residual stress.

To improve the process reliability, a higher level of pull force to disengage the pin can be required to overcome the tensions in the workpiece.

Pull force:
1960N

Cnomo

Pin packages according to Cnomo standard also available with manual operation.

CNOMO

Retractable locating pin packages with toggle linkage

- Fully encapsulated toggle mechanism: in case of air loss, the working position remains secure
- Clear design with user-friendly surfaces

Retractable locating pin packages with dual rods and toggle linkage

- Fully encapsulated toggle mechanism: in case of air loss, the working position remains secure
- Clear design with user-friendly surfaces and no dirt or welding deposit traps

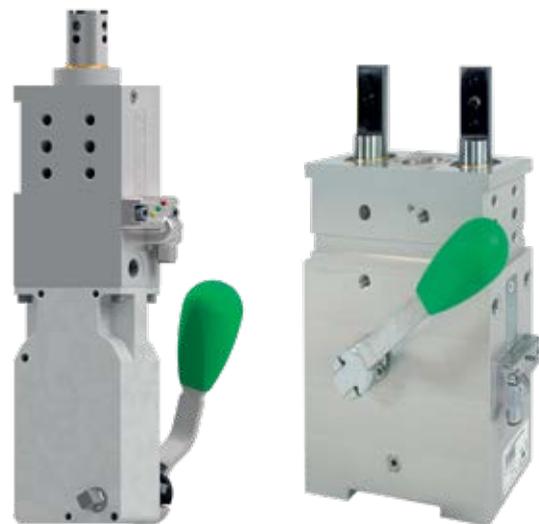

Retractable locating pin packages with toggle linkage and manual operation

- Manual unlock mechanism to disengage the linkage in emergency situations

Retractable locating pin packages with dual rods, toggle linkage and manual operation

- Manual unlock mechanism to disengage the linkage in emergency situations

R-Series

Retractable locating pin packages

RT-Series

Retractable locating pin packages with toggle linkage

- Fully encapsulated toggle mechanism: in case of air loss, the working position remains secure
- Manual unlock mechanism to disengage the linkage in emergency situations
- Position repeatability ± 0.05 mm
- Clear design with user-friendly surfaces and no dirt or welding deposit traps

LOCATING

Technical features

Pneumatic ports on both sides of the cylinder.

Operating features

Operating pressure from 2 to 8 bar / from 30 to 115 psi

Lubrication all the devices are lubricated for life at the factory. Inline air lubrication isn't required

DETAIL: A

REV. 00 - 31/03/2015

F-Series

Retractable locating pin packages with dual rods

Technical features

Pneumatic ports on both sides of the cylinder.

Operating features

Operating pressure from 2 to 8 bar / from 30 to 115 psi

Lubrication all the devices are lubricated for life at the factory. Inline air lubrication isn't required

Functional charts

Size 40-41 mm

• Max deflection

Locating

Quick installation guide

LOCATING

Caution

Any maintenance operation may only be carried out by qualified and authorized personnel. For any reason, do not reach into the pivoting range of the clamping arms, when the clamps are in operation. Disconnect and lock out pneumatic and electric supply lines before operating on or around clamps.

A worksheet for the right sizing of the pin packages is available upon request. Visit our website for technical documents

<http://automotive.pneumax.it/>

Pressure operating range: from 2 to 8 bar/ from 30 to 115 psi.
Inline lubrication isn't required: if lubricated air is used, it is necessary to continue using lubricated air, as the oil in it may have removed the basic lubrication in the device.

Functional description

Retractable locating pin packages

When operated, the cylinder **extends and retracts the rod**.

Anti-rotation mechanism. A dual piston rod guiding grants positional **accuracy and repeatability**.

Retractable locating pin packages with CNOMO mounting pattern

When operated, the cylinder **extends and retracts the rod**.

Anti-rotation mechanism. A dual piston rod guiding grants positional **accuracy and repeatability**. Please refer to the catalogue for the deviation values for different strokes and load.

High Performance retractable locating pin packages

Pneumatic tandem pin package with **large output force**. Pressure is applied to both pistons resulting in an approximately doubled piston output force of a corresponding piston diameter. Appreciable **saving in bulk** and weight due to the all-aluminium housing, which comprises the head cap. **Anti-rotation** mechanism. A dual piston rod guiding grants positional **accuracy and repeatability**.

Retractable locating pin packages with dual rods

When operated, the cylinder **extends and retracts the rods**, which could be **rotated by 180°**, thus achieving a **symmetrical rod orientation**. A dual piston rod guiding grants positional **accuracy and repeatability**. Make sure that the rods are doweled only on a single side to avoid any misalignment. Please refer to the catalogue for the deviation values for different strokes and load.

The clamp is warranted for 3 mln cycles in correct operating conditions

No lubrication.

No preventive maintenance.

The pin packages do not require any specific adjustment.

The rod alignment as well as the anti-rotation are set in the manufacturing department and do not require any adjustment on-site.

External cleaning with non-corrosive detergents is required: cleaning interval depends on the ambient conditions as well as on the frequency of use.

Pin package installation to the tool

The pin package can be installed by one of its three mounting surfaces, using dowels and screws according to its datasheet. The tightening torques to be set are:

M6 10 N m / 7.37 lb-ft

M8 25 N m / 18.43 lb-ft

Use the key support surfaces, where available.

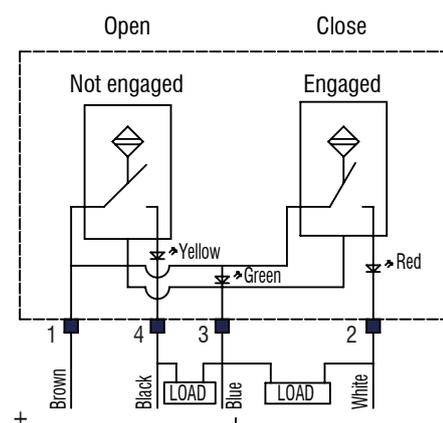

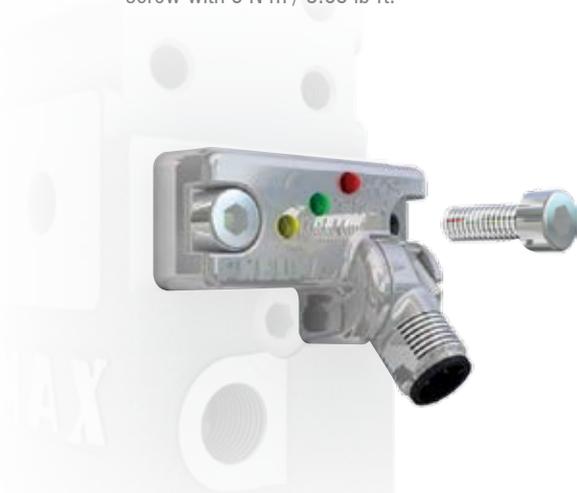

Always use all the bores on the mounting pattern.

Electronic sensor

ES001 is used for all pin packages' sizes and series. Stepless adjustment of the connector: unscrew the tightening screw and set the connector in the required position, then secure the screw with 5 N m / 3.68 lb-ft.

To replace the sensor, remove the M5 screw and assemble a new one by tightening the same screw with 5 N m / 3.68 lb-ft.

Technical features	
Operating voltage	10-30 VDC
Voltage drop	≤ 2 V
Load current	≤ 100 mA
Current consumption	≤ 25 mA

Open position indication	yellow LED
Closed position indication	red LED

Simplified diagram (PNP)

Handling

Pneumatic gripper clamps with fully adjustment opening angle

HANDLING

Quick set-up

No flow valve required

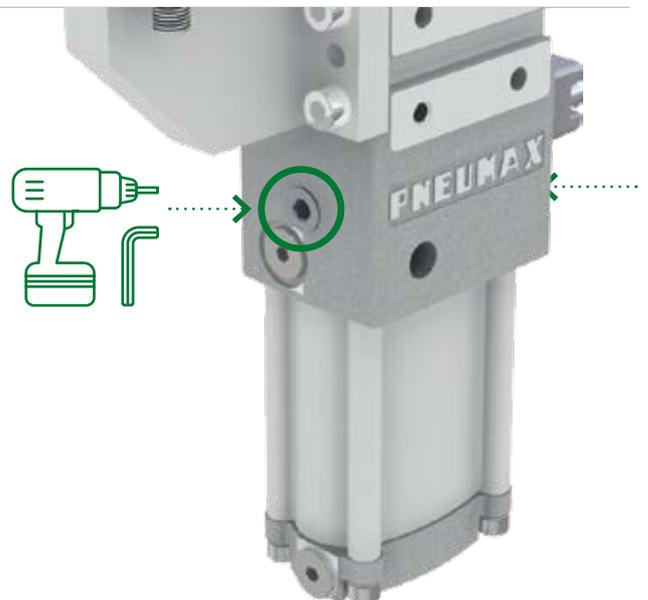

Toggle-joint mechanism

Compact gripper clamps with toggle-joint mechanism, to secure the workpiece clamping in case of air loss: the jaws remain locked in closed position.

Mainly used to **hold the workpiece on edges or through holes – from above or below – and to transfer parts.**

The shortest set-up time in the market

Easy field adjustment of the opening angle, from the rear or front side of the gripper clamp with the shortest set-up time in the market.

Handling products

J-Series

Complete reliability of the angle adjustment over time integrated mechanism secures the adjusted position and prevents any sliding or opening angle displacement. A **retain mechanism** secures the **adjustment tool in its seat** and prevents the Allen wrench to fall down during the adjustment procedure.

Even without air, the clamp can be toggle-locked through the adjustment means.

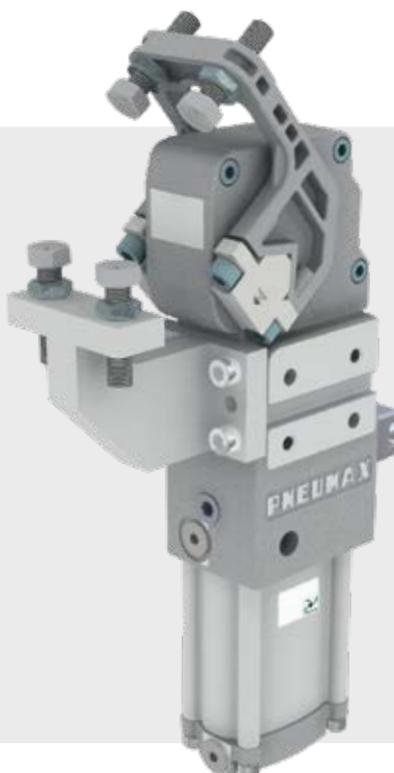

Sealed roller bearings

Lightweight design, which does not compromise the stiffness and strength of the housings.

Equipped with sealed roller bearings, to ensure a high protection degree against contaminants > **fully encapsulated housing**.

No flow valve required

No slamming towards the opening position due to an optimal integrated cushioning system.

J-Series

Pneumatic gripper clamps

Technical features

Manual release button to open the linkage when air pressure is removed during setup. **Pneumatic ports on both sides** of the cylinder.

Operating features

Operating pressure	from 2 to 8 bar / from 30 to 115 psi
Lubrication	all the devices are lubricated for life at the factory. Inline air lubrication isn't required

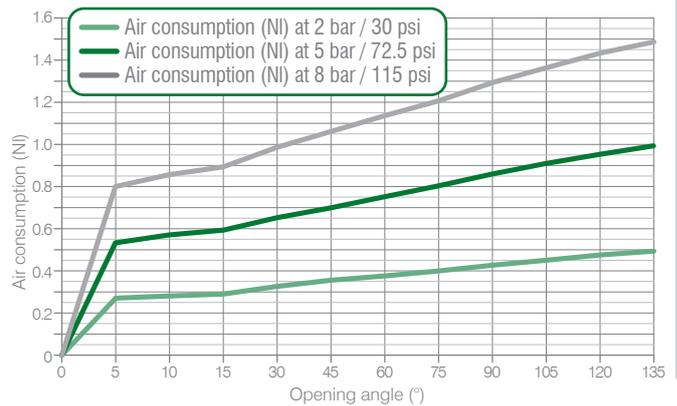

Functional charts

Size 40 mm

- **Cycle time for max opening angle**
< 0.8 s NO flow valve required
- **Clamping moment (at 5 bar / 72.5 psi)**
50 N m / 36,87 lb-ft
- **Holding moment**
75 N m / 55,31 lb-ft

The above data are meant for correct working conditions of the clamp with the same performance level during its life time. For applications which exceed the above data, please contact our sales representatives.

- **Air consumption / Complete cycle (opening and closing)**

Handling

Quick installation guide

Caution

Any maintenance operation may only be carried out by qualified and authorized personnel. For any reason, do not reach into the pivoting range of the clamping arms, when the clamps are in operation. Disconnect and lock out pneumatic and electric supply lines before operating on or around clamps.

A worksheet for the right sizing of the clamp is available upon request. Visit our website for technical documents

<http://automotive.pneumax.it/>

Pressure operating range: from 2 to 8 bar/ from 30 to 115 psi.
Inline lubrication isn't required: if lubricated air is used, it is necessary to continue using lubricated air, as the oil in it may have removed the basic lubrication in the device.

HANDLING

The clamp is warranted for 3 mln cycles in correct operating conditions

No lubrication.

No preventive maintenance.

External cleaning with non-corrosive detergents is required: cleaning interval depends on the ambient conditions as well as on the frequency of use.

Clamp installation to the tool

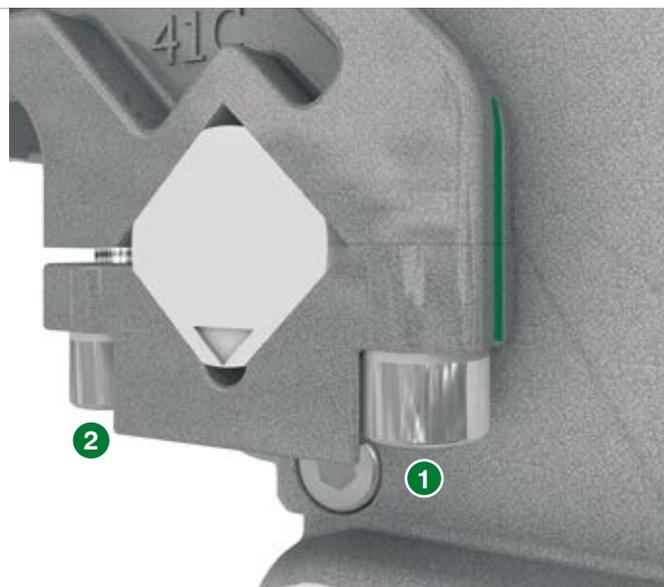

The gripper clamp can be installed by one of its four mounting surfaces, using dowels and screws according to its datasheet. The tightening torques to be set are:

M6 10 N m / 7.37 lb-ft

Use the key support surfaces, where available.
Always use all the bores on the mounting pattern.

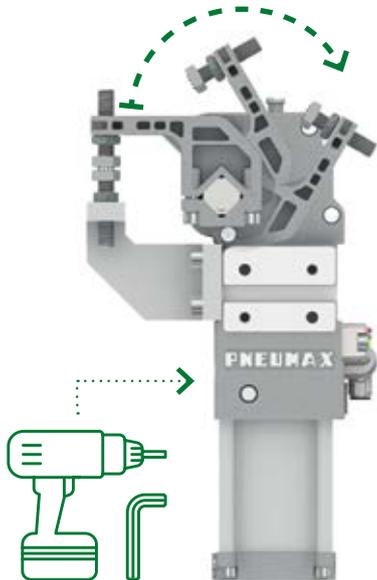

Clamping jaws mount

The sides of the brackets have two different heights. Assemble the brackets to the side of the clamping arm, so that the surfaces, where the side mark has been machined on, will match. Secure, at first, the screw on the mark side **1** by setting the tightening torques to 22 N m /16.22 lb-ft and leave no gap between the bracket and the jaws. Then, secure the other screw **2**: in this case, due to the different length of the sides of the brackets, a gap between the same and the clamping arm will be noticed. Always use locking washers. Please refer to the clamping arms' datasheet for possible clamping arm position and the respective max opening angle.

Opening angle adjustment

The jaws must be in the open position. Insert a 5 mm hexagonal flat Allen Wrench or a screw gun and adjust the opening position to the required opening angle.

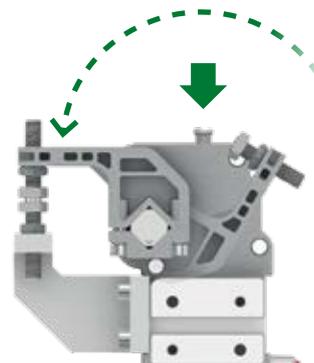

Visit our website for a video of the adjustment procedure. **No adjustment of the sensor is required.**

One access point to opening angle adjustment on each side

Manual release button

To manually unlock the mechanism, hit the bolt with a rubber mallet. The linkage will automatically release itself from the over-centre position. To close the clamps during set-up operations, without air, use a screw gun or a flat Allen wrench to engage the adjustment means and adjust the clamp till 0° opening angle: the linkage will be toggle-locked as the manual release button is completely outside. The J40D and the JK40D series are equipped with a handlever, with whom the clamp can be closed and opened.

Adjustment Of the tips

Adjust the lower tips at a predetermined position and place the metal sheet to be held. For an optimal holding of the workpiece, adjust the tips on the mobile arm until contact with the workpiece is reached. Open and close the clamp. After a proper adjustment to get the required clamping force has been accomplished, secure the tip screws by tightening the bolts. Tips with different holding surfaces are available upon request.

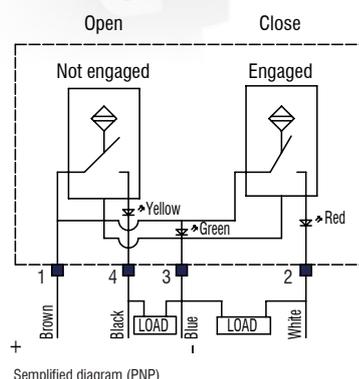

Electronic sensor

ES001 is used for all clamps' sizes and series. Stepless adjustment of the connector: unscrew the tightening screw and set the connector in the required position, then secure the screw with 5 N m / 3.68 lb-ft.

To replace the sensor, remove the M5 screw and assemble a new one by tightening the same screw with 5 N m / 3.68 lb-ft.

Pivoting

Robust and reliable pivot units to accurately position and/or rotate tooling or parts to work condition

Quick set-up

Robust conical roller bearings

PIVOTING

Easy set-up and quick installation time

The orientation of the ports can be easily achieved by untightening the tie rods.

No external limit stop required

Pneumatic cushioning of both end positions: fixed orifices and integrated cushioning provide for smooth operation in the closing and opening cycles.

Robust conical roller bearings

Drive shaft connections are all equipped with robust conical roller bearings for a **high load capacity and side load acceptance**.

All enclosed mechanism

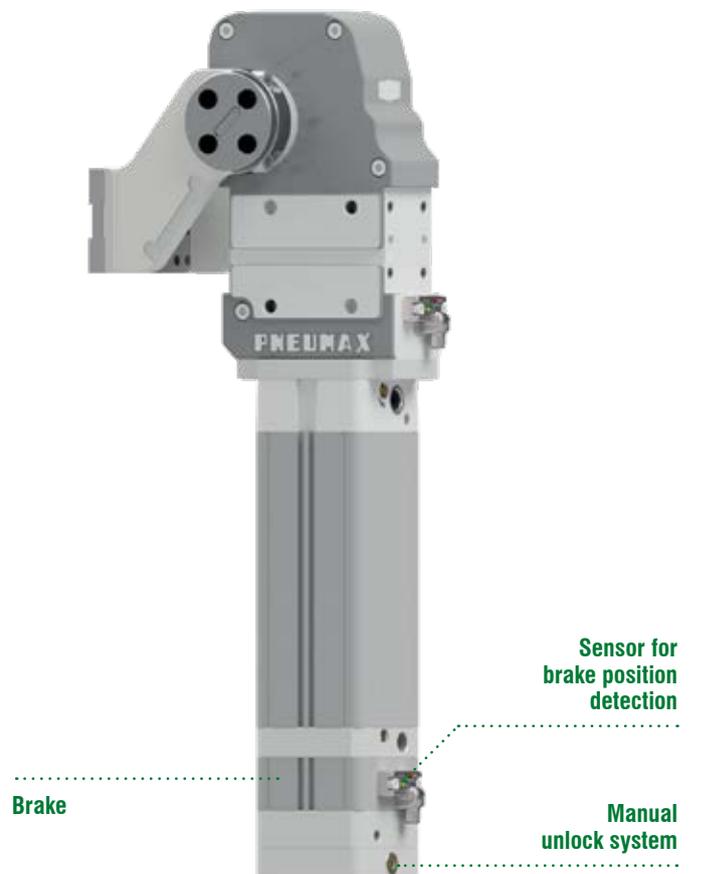

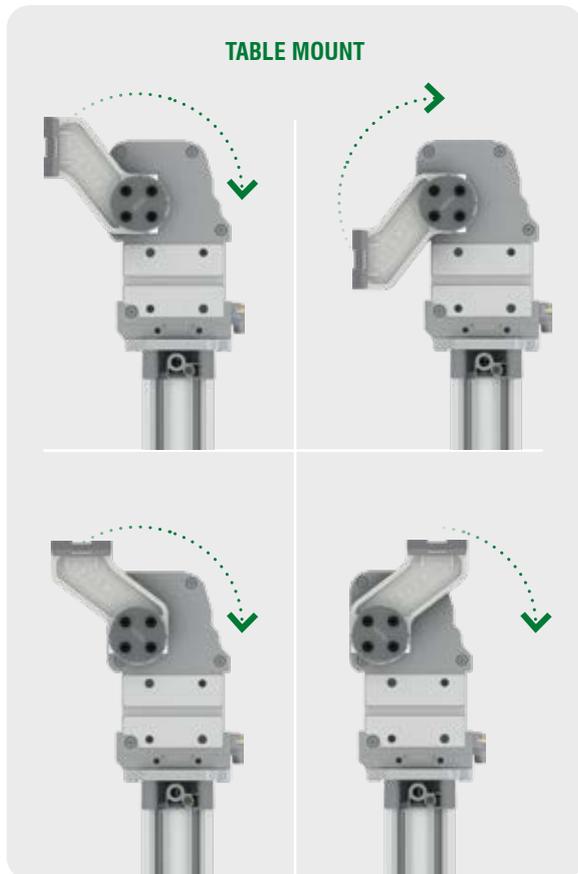

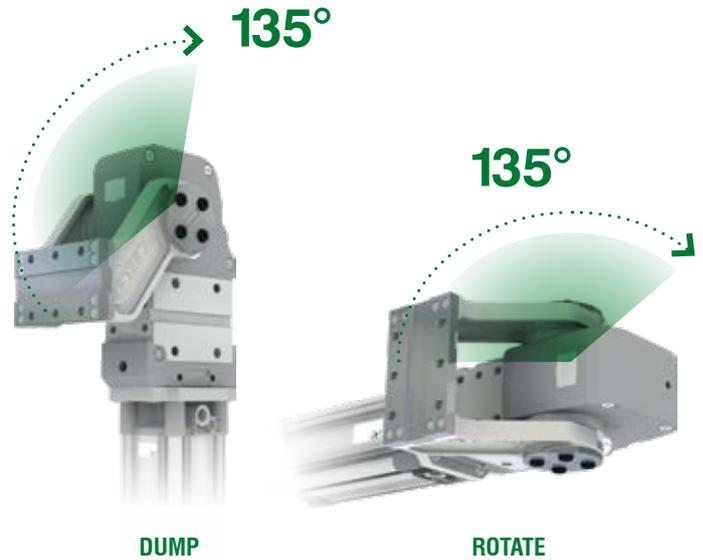

to ensure a high protection degree against contaminants and years of service life **without maintenance** to minimize downtime associated with contamination.

Power pivots

P-Series

The P series can be mounted by its rear or front mount and can be used as a **DUMP** device. By mounting the pivot units by their lateral mounts, they can be used to **ROTATE** parts, tooling and clamps' assemblies.

- Remains locked even after loss of air pressure
- Front, rear and side mounting surfaces
- Four table mounting positions available
- 1 sensor for all sizes and opening angle with stepless adjustable connector
- Extra light products

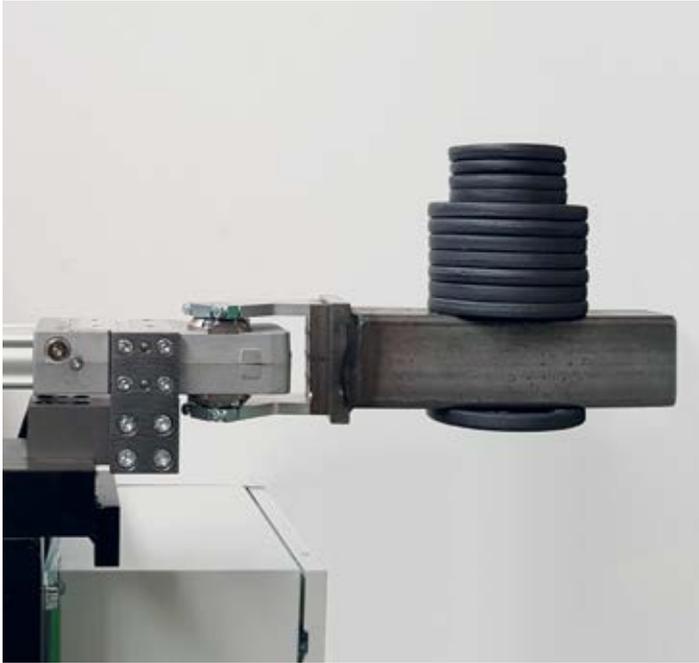

P63-Series

Pneumax guarantees high reliability of all products though a 100% testing procedure made by the Automotive division Quality Department.

Conforming to standard

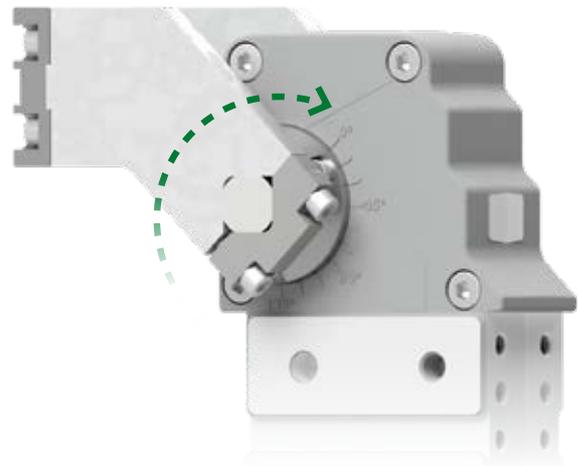

PIVOTING

Pivoting Quick installation guide

Caution

Any maintenance operation may only be carried out by qualified and authorized personnel. For any reason, do not reach into the pivoting range of the units, when they are in operation. Disconnect and lock out pneumatic and electric supply lines before operating on or around power pivots.

Functional description

PNEUMAX power pivots are rotating units typically used in the field of sheet metal working. A pneumatic cylinder operates a toggle linkage and drives it to its closed or open position. A toggle mechanism, integrated in the power pivot's housings, guarantees the closed condition even in the absence of the actuation command.

An external actuating arm is connected to the shaft of the linkage. Power pivots are robust and reliable devices used in fixtures to accurately position and rotate workpieces: they are equipped with robust conical roller bearings with high-load capacity and side load acceptance. They can be mounted by their rear or front mounting surfaces and be used as dump devices, or they can be mounted by their side mounting surfaces and be used to rotate parts or assemblies. The open and closed positions of the actuating arm, also referred to as swivelling table or saddle arm, is detected by an inductive sensor through integrated sensor means in the linkage. Power pivots can be equipped with brake devices configured to stop the unit during its stroke in case of pressure loss.

Safety

Power pivots are designed and manufactured as components to be incorporated in more complex systems or toolings: they are not stand-alone or independent ready-to-be-used devices and for this reason they are not equipped with their own safety equipment.

Power pivots should not be operated before the complete safety control system of the tooling is activated and certified as conforming to all directives and related safety requirements.

All operations and any maintenance work on power pivots must be carried out exclusively by trained staff and by observing all conditions which guarantee the safety of the personnel, in a complete standstill of the whole system.

Handling

Make sure that the packaging is not damaged before unboxing the units; given its considerable weight, it is advisable to use a suitable lifting system and to guarantee that during its handling the load is stably balanced.

Power pivots installation to the tool

Power pivots can be installed by one of their mounting surfaces, using dowels and screws according to its datasheet. The tightening torques to be set are:

M5	5 N m / 3.68 lb-ft
M6	10 N m / 7.37 lb-ft
M8	25 N m / 18.43 lb-ft
M10	35 N m / 25.81 lb-ft
M12	50 N m / 36.87 lb-ft

Use the key support surfaces, where available.
Always use all the bores on the mounting pattern.

Operating conditions

Pressure operating range:

from 2 to 8 bar/ from 30 to 115 psi

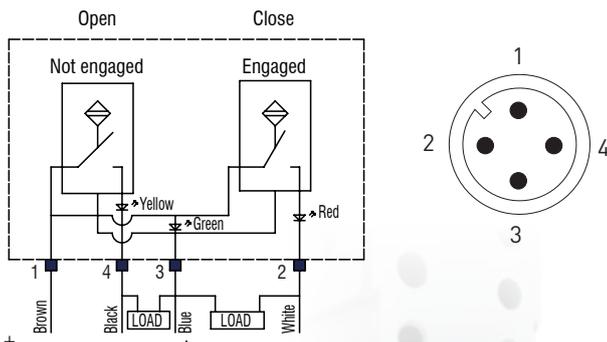

Inline lubrication isn't required:
if lubricated air is used, it is necessary to continue using lubricated air, as the oil in it may have removed the basic lubrication in the device.

Electronic sensor

ES001 is used for all power pivots' sizes and for the detection of the brake condition (activated/ deactivated).
Adjustment of the connector: unscrew the tightening screw and set the connector in the required position, then secure the screw with 5 N m / 3.68 lb-ft.

Technical features

Operating voltage	10-30 VDC
Voltage drop	≤ 2 V
Load current	≤ 100 mA
Current consumption	≤ 30 mA
Short-circuit protection	protected
Protection rating	IP68
Operating temperature	-0 °C +50 °C
Storage temperature	-25 °C +60 °C
Electromagnetic compatibility	EN 60947-5-2:2007 + A1:2012
Power supply indication	green LED
Open position indication	yellow LED
Closed position indication	red LED
Digital output type	PNP

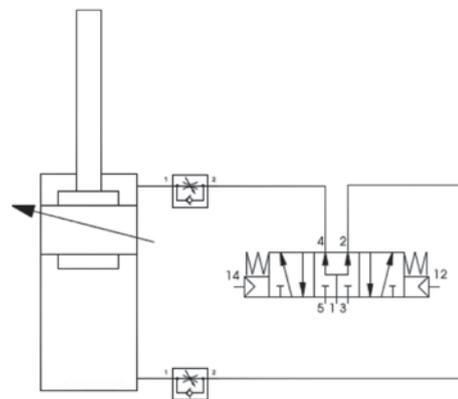

Simplified diagram (PNP)

To replace the sensor, remove the M5 screw and assemble a new one.

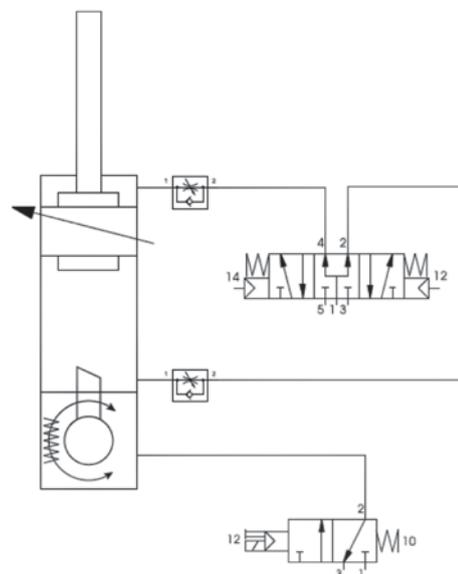

Pneumatic connection Recommended pneumatic scheme

Power pivot without brake

Power pivot with brake system

Manual release mechanism of the linkage

A manual override access to untoggle the linkage in case of emergency is provided for all power pivots. Before unlocking the mechanism, make sure not to reach into the swivel area of the saddle arm: once the linkage is untoggled, the arm can move quickly and abruptly in any direction.

WARNING

Make sure all safety requirements are met. Such operations must be carried out by qualified specialists.

Brake system

A patented brake system allows for a reliable braking in case of pressure drop. An original design guarantees a wide braking surface in extremely reduced radial dimensions. The brake system is designed for static conditions.

Operating pressure: **2.5 to 8 bar**

We suggest to carry out a yearly functional test of the brake system by simulating an emergency stop.

Patented

PIVOTING

Brake manual unlock device for emergency situations

Power pivots can be equipped with an unlock device to disengage the brake in case of emergency.

A built-in access for a 5 mm Allen wrench is integrated below the rear end cap. A clockwise movement of the Allen wrench will unlock the brake.

This procedure must be carried out exclusively by qualified specialists. Make sure to meet all related safety requirements and make sure that no operator reaches into the swivel area of the arm.

WARNING

Unlocking the brake will generate an immediate, abrupt movement of the load.

Once the Allen wrench is removed and air is supplied again to the unit, the brake will reset itself automatically.

Orientation of the supply ports

The orientation of the supply ports on any power pivot can be easily and quickly modified, simply by untightening the 4 tie rods and rotating the cylinder block. Air must be disconnected during this procedure. Make sure to comply with the tightening torque specifications shown in the previous pages “power pivots installation to the tool”.

External stops, guides and shock absorbers

Using external stops, guides and shock absorbers is not a recommended procedure, as it may interfere with the correct functioning of the unit. All Pneumax power pivots are equipped with an integrated hard stop for the linkage, which guarantees an accurate and repeatable closed position. By using additional external stops or guides which prevent the power pivot to completely reach its end stroke, the correct functioning of the linkage will be jeopardized and it will invalidate any warranty of the unit.

In case external stops or guides are installed by the customers, they must not interfere with the correct functioning of the unit.

In case external guides are used, they must not generate any interference higher than 0,05 mm on their support.

In case the load conditions require shock absorbers to be installed, it is strongly recommended that they do not reach their end-stroke before the power pivot is toggle locked.

Stacking conditions

Warehouse temperature: **from -20°C to 50 °C**

Relative humidity: **10% to 90%**

Info

automotive@pneumaxspa.com

MLGA NC Locator

Multi-Axes Locator for Geometric Alignments

Positioning locator with interpolated electric actuators with ball bushings and brushless servo motors, all controlled by a digital driver system to provide the geometric alignments.

- **Compact design:** the MLGA can be used on grounded toolings or on end effectors with robots
- **High repeatability** and high location accuracy
- **High protection** level against contamination: all components are protected against welding spatter and deposits of debris from on-going mechanical processes. Suitable for harsh environments, as Body In White
- **User-friendly interface** - Simplified HMI, augmented reality and cloud connection.

In partnership with

TELMOTOR

SIEMENS

Compactness

High repeatability

High resistance

User-friendly Interface

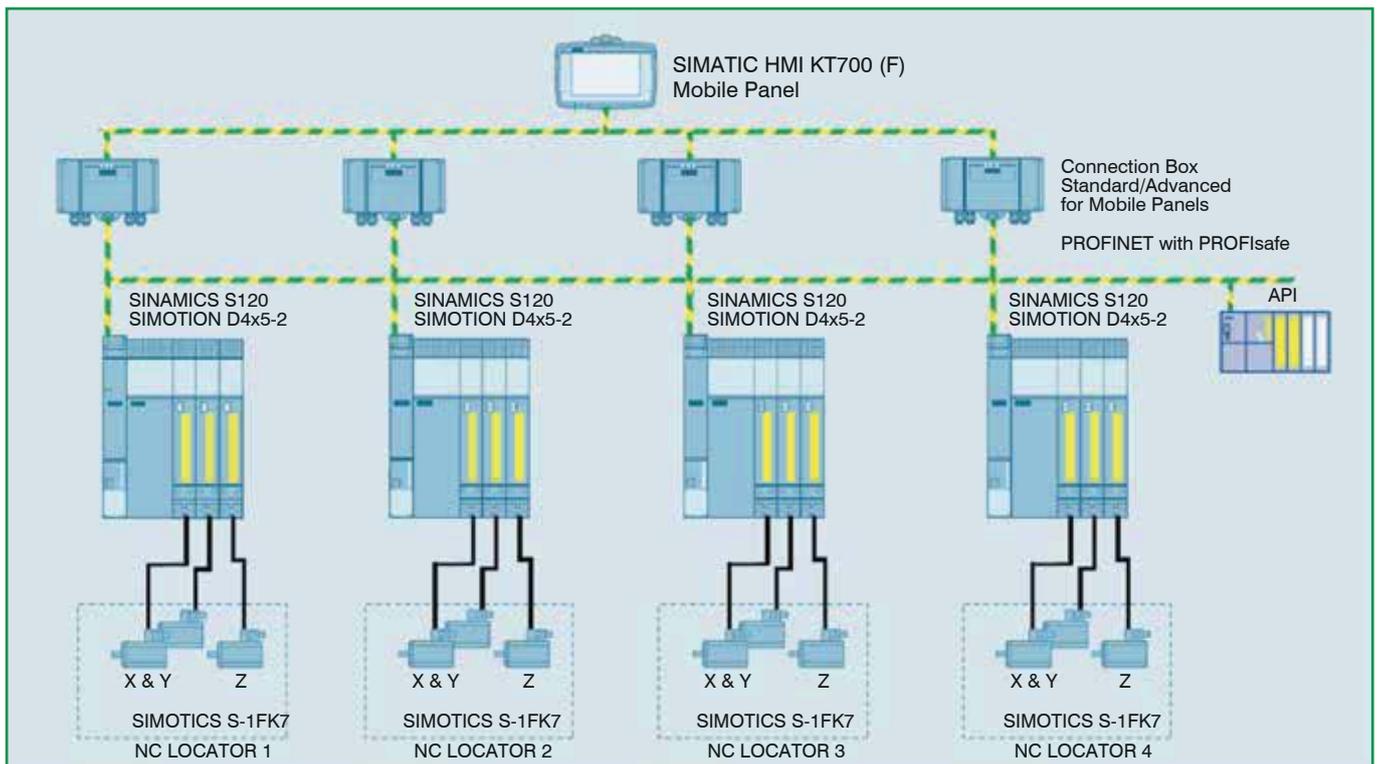

General features

- **DIGITAL TWIN** for commissioning, testing, training and customer specific adoption.
- **RECONFIGURABILITY**: the system allows the operator to adjust the location in order to quickly and easily adapt to different geometric alignments of different models
- **SINAMICS S120** drives with extended safety functions
- **SIMATIC IoT2040 PLATFORM**: in Cloud accurate monitoring of functional parameters and data analytics.
- **SINEMA REMOTE CONNECT** for secure maintenance and connection
- **AUGMENTED REALITY** for easy to use interoperability with the machine and production line.

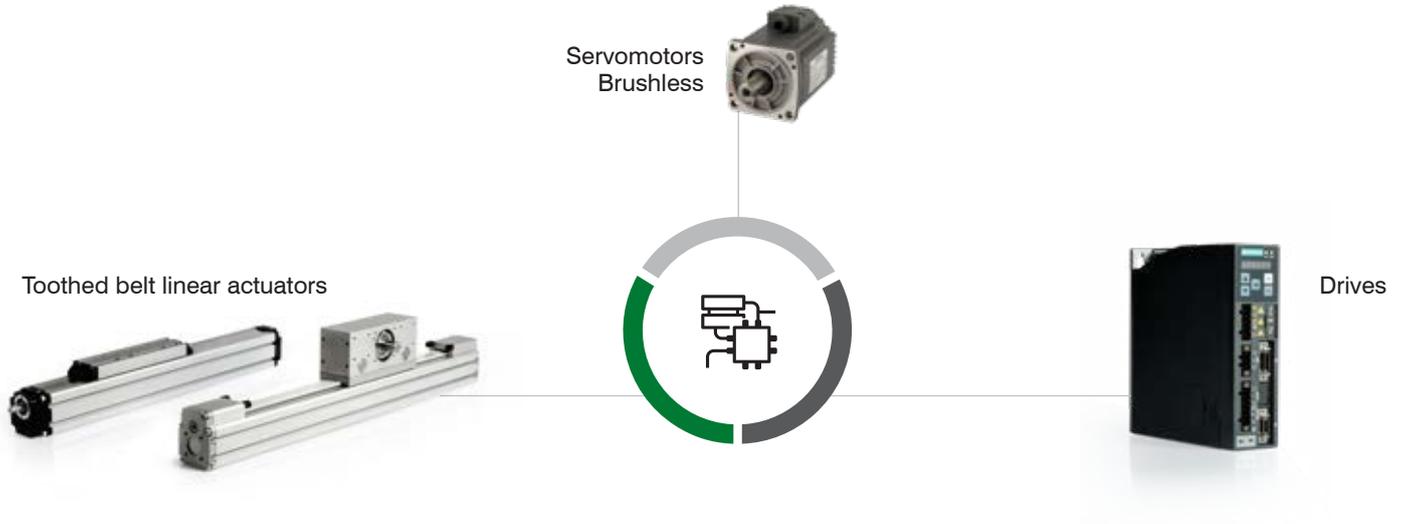

Interpolation of different systems

Possible configuration for process time reduction

Electric actuation

Ball screw linear actuators

The ball screw linear actuators are available in many series and sizes: they show differ load capabilities and maximum precision and reliability.

Anodized aluminum profile with mounting holes to install sensors along the length of the actuators.

Protection against external contamination is achived thanks to hardened stainless steel strip and sliding elements on the outer carriage. Dual-guide versions are ideal for high load and for high inertia moments applications.

- **Compact linear tables with double parallel guides**
- **Hardened stainless steel strip**
- **Compact linear tables**
- **Available with double external guide**
- **Square-profile actuators with single or double guide**
- **Protective bellows and integrated position sensor**
- **“T” slot for proximity switches**

Toothed belt linear actuators

Linear actuators with steel reinforced polyurethane toothed belt and belt tensioning system are available with one or two ball rail systems. "T" slot as mounting surface and "T" slot for proximity switches.

- Carriage in anodized aluminum with "T" slots
- Square profile with double external guide
- Motor mount assembly available in two different versions
- Actuator with motor mounted to the transmission box for vertical application
- Actuator with single or double carriage and bidirectional movement
- Square profile with single or double guide
- Flat profile
- Integrated tensioning system

Servomotors and drives

- IP65 protection degree available
- Internal setpoint (IPOS) for position control
- Profinet interface connection
- Maximum productivity and energy efficiency
- Overload possibility: up to thrice of the nominal torque
- Integrated braking resistor
- Pulse train positioning (PTI)

1390-Series

Ecolight cylinders according to ISO 15552 standard with integrated metal rodscraper

Permanent protection of the piston rod against welding debris particles: the metallic wiper constantly wipes any welding deposits off the piston rod.

The seal is made of a special FKM-based elastomer with approx. 81 shore hardness.

Technical features	
Fluid	Filtered and preferably lubricated air (if lubricated the lubrication must be continuous)
Max. pressure	10 bar

Product features	
End plates	Die-casting aluminum
Rod	C43 chromed steel
Barrel	Anodised aluminum alloy
Rod-guide bushing	Spheroid bronze on steel band with P.T.F.E. coat
Seals	Standard: NBR oil resistant rubber, PUR piston rod seals (PUR seals available upon request)
Cushion adjusting screws	Brass

6110-Series

Guided compact cylinder with additional metal rod scrapers

The rod guide is equipped with bearing bushings and guarantees **high precision and high loads**.

Technical characteristics	
Function	double acting
Fluid	filtered air, if lubricated, the lubrication must be continuous
Working pressure	max. 10 bar
Working temperature	-5°C - +70°C
Cushioning	elastic bumper on both ends

Construction characteristics	
Body	anodised aluminium
Guide rods	tempered and chromed steel
Piston	aluminium
Piston rod	C43 chromed steel
Rods bushing	bearing bushing
End plate	anodised aluminium
Piston seal	oil resistant NBR rubber
Piston rod seal	PUR
Rod scrapers	brass with a NBR seal
Plate	nickel plated steel

The cylinders are equipped with 4 rod scrapers on the guide rods and 1 rod scraper on the central piston rod

Standard strokes									
Bore	Stroke								
	10	20	25	50	100	125	150	175	200
Ø32			•	•	•	•	•	•	•
Ø40			•	•	•	•	•	•	•
Ø50			•	•	•	•	•	•	•
Ø63			•	•	•	•	•	•	•

Intermediate strokes can be obtained using spacers with defined length (5, 10, 15, 20 mm).

Example: It is possible to obtain a **6110.32.45.C** cylinder from a **6110.32.50.C** cylinder by inserting a spacer with length of 5 mm.

The intermediate strokes manufactured without the use of spacers are considered special executions.

AR-Series

Optional: auto-retaining device for opening position

An extremely light device which maintains the clamping arm in its defined opening position in case of air loss. The AR-series has been designed for **maximum load capacity** and due to its compact dimensions, it can be used on the same side of the manual operation handle. It locks the manual lever and guarantees the working position of the pin package with no air. It can easily be assembled on the right, as well as on the left side of the unit.

Auto-retaining device

Quick installation guide

Caution

Any maintenance operation may only be carried out by qualified and authorized personnel. For any reason, do not reach into the pivoting range of the clamping arms, when the clamps are in operation. Disconnect and lock out pneumatic and electric supply lines before operating on or around clamps.

A worksheet for the right sizing of the pin packages is available upon request. Visit our website for technical documents

<http://automotive.pneumax.it/>

Auto-retaining device for opening position

Patented

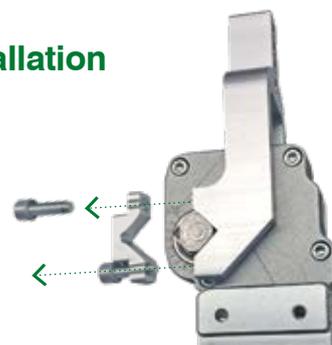

An extremely light device which maintains the clamping arm in its defined opening position in case of air loss. The AR-series has been designed for **maximum load capacity** and due to its compact dimensions, it can be used on the same side of the manual operation handle.

With the clamping arm in the opening position

Clamp arm installation

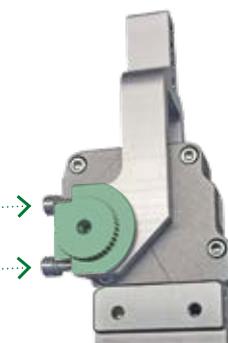

Step 1

Remove the standard bracket.

Step 2

Replace the standard bracket with the specific bracket included AR kit, and tighten it.

Step 3

Adjust the retaining device according to the opening angle, install the pin screw in the threaded hole of the side mount and tighten the retaining device with its screw.

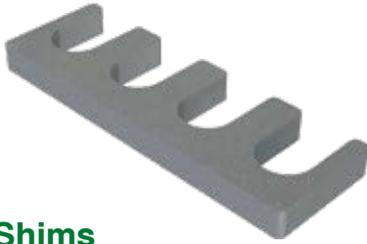

Step 4

Set the interference between the holding device and the pin screw by slightly increasing or decreasing the opening angle adjustment, till the function is secured.

part no. **CB40/63**

Marking	Temperature	Size	Mounting Pattern
II 2G Ex h IIC T6 Gb X II 2D Ex h IIIC T85°C Db X	0°C ≤ Ta ≤ +50°C (T6/T85°C)	Ø40; Ø63mm	International mount

ATEX READY

SERIES AR

part no. **AR_/AR_N/AR09R**

Marking	Temperature	Size	Mounting Pattern
II 2G Ex h IIC T6 Gb X II 2D Ex h IIIC T85°C Db X	0°C ≤ Ta ≤ +50°C (T6/T85°C)	12mm; 16mm; 19mm; 22mm; 30mm	International mount / NAAMS Standard

Locating

ATEX READY SERIES R				
	part no. R_32			
	Marking	Temperature	Size	Stroke
	II 2G Ex h IIC T6 Gb X II 2D Ex h IIIC T85°C Db X	0°C ≤ Ta ≤ +50°C (T6/T85°C)	Ø32mm	20mm; 40mm
	part no. R_50/63			
Marking	Temperature	Size	Stroke	
II 2G Ex h IIC T6 Gb X II 2D Ex h IIIC T85°C Db X	0°C ≤ Ta ≤ +50°C (T6/T85°C)	Ø50; Ø63mm	15mm; 25mm; 40mm; 50mm; 60mm	
ATEX READY SERIES RT				
	part no. RT_40			
	Marking	Temperature	Size	Stroke
	II 2G Ex h IIC T6 Gb X II 2D Ex h IIIC T85°C Db X	0°C ≤ Ta ≤ +50°C (T6/T85°C)	Ø40 mm	40 mm
ATEX READY SERIES RC				
	part no. RC_D50/63			
	Marking	Temperature	Size	Stroke
	II 2G Ex h IIC T6 Gb X II 2D Ex h IIIC T85°C Db X	0°C ≤ Ta ≤ +50°C (T6/T85°C)	Ø50; Ø63mm	25mm; 50mm
ATEX READY SERIES HP				
	part no. HP50			
	Marking	Temperature	Size	Stroke
	II 2G Ex h IIC T6 Gb X II 2D Ex h IIIC T85°C Db X	0°C ≤ Ta ≤ +50°C (T6/T85°C)	Ø50mm	15mm; 25mm; 40mm; 50mm; 60mm
ATEX READY SERIES F				
	part no. F_40/41/63			
	Marking	Temperature	Size	Stroke
	II 2G Ex h IIC T6 Gb X II 2D Ex h IIIC T85°C Db X	0°C ≤ Ta ≤ +50°C (T6/T85°C)	Ø40 mm, Ø41 mm, Ø63mm	15mm; 25mm; 40mm; 50mm; 60mm
ATEX READY SERIES FT				
	part no. FT_50			
	Marking	Temperature	Size	Stroke
	II 2G Ex h IIC T6 Gb X II 2D Ex h IIIC T85°C Db X	0°C ≤ Ta ≤ +50°C (T6/T85°C)	Ø50 mm	40mm

Handling

ATEX READY

SERIES J

part no. **J_40**

Marking	Temperature	Size	Arm
II 2G Ex h IIC T6 Gb X II 2D Ex h IIIC T85°C Db X	0°C ≤ Ta ≤ +50°C (T6/T85°C)	Ø40 mm	Aluminum / Steel

Pivoting

ATEX READY

SERIES P

part no. **P63**

Marking	Temperature	Size	Opening Angle
II 2G Ex h IIC T6 Gb X II 2D Ex h IIIC T85°C Db X	0°C ≤ Ta ≤ +50°C (T6/T85°C)	Ø63 mm	0°-135°

cod. **P80/100/125**

Marking	Temperature	Size	Opening Angle
II 2G Ex h IIC T6 Gb X II 2D Ex h IIIC T85°C Db X	0°C ≤ Ta ≤ +50°C (T6/T85°C)	Ø80, Ø100 mm, Ø125 mm	45°; 60°; 90°; 120°; 135°

Components for the automotive industry

Pneumax is a **one-source supplier** for the Automotive Industry with a comprehensive line of:

- **Pneumatic drives**
- **Valves**
- **Valve terminals**
- **Communication control blocks**
- **Compressed air preparation**
- **Grippers**
- **Exhaustive range of clamping, locating, handling and pivoting devices for BIW.**

ECOMPACT
Compact cylinders

SHORT STROKE
Compact cylinders

ECOLIGHT ISO 15552
Standard-based
light cylinders

ISO 6432
Standard-Based
microcylinders

ECOFLAT
Flat cylinders

RODLESS
Cylinders

GUIDED
Compact cylinders

GUIDED COMPACT CYLINDERS
Metal Rod Scrapers

Serial connections with:

- **CAN**open
- Ether**CAT**®
- **DeviceNet**™
- **IO-Link**
- **PROFI**®
BUS
- **PROFI**®
NET
- **EtherNet/IP**™

ROTARY ACTUATORS
Cylinders

AIRPLUS
Modular Air Service Units

OPTYMA
Valve Manifold series

PARALLEL GRIPPERS
Compact cylinders

Radial grippers
(180°)

Three-points grippers

Angle grippers

Mini slides

CABINETS AND SYSTEMS

ISO 15407
Valve Manifold series

SERIE 1700
Proportional regulators

SPECIAL SOLUTION
Cooling water intake cylinder
