## Solutions for pneumatic automation

### Introduction

### About Pneumax

12

### Section 01

### Air distribution

### Valves and solenoid valves

#### Spool type valves and solenoid valves

Single and manifold versions, mechanical and manual or pneumatic command

|             |      |             |       |                            |       |
|-------------|------|-------------|-------|----------------------------|-------|
| Series 104  | 1.1  | Series 800  | 1.68  | Series 2100 Line-Flat-Base | 1.124 |
| Series 105  | 1.12 | Series 888  | 1.77  | Series 2400 Line-Flat-VDMA | 1.139 |
| Series 200  | 1.21 | Series 400  | 1.91  | Series 2600 Line-Flat-VDMA | 1.160 |
| Series T200 | 1.54 | Series T400 | 1.110 |                            |       |

#### Direct operated solenoid valves

Pilot valves, high flow rate performance 2/2 ways and 3/2 ways, version miniaturised available as well

|                       |       |                       |       |                   |       |
|-----------------------|-------|-----------------------|-------|-------------------|-------|
| Series 300            | 1.175 | Series CNOMO          | 1.197 | UL solenoid coils | 1.202 |
| Solenoid coils        | 1.189 | Series S              | 1.200 |                   |       |
| Series M (mechanical) | 1.193 | 300-UL solenoid coils | 1.202 |                   |       |

#### Poppet valves and solenoid valves

3/2 and 2/2 valves and solenoid valves for compressed air and vacuum, with aluminium and technopolymer body

|                 |       |
|-----------------|-------|
| Series 700      | 1.204 |
| Series PG       | 1.207 |
| Series T772-773 | 1.224 |
| Series T771     | 1.239 |

#### “Namur” valves and solenoid valves

NAMUR valves and solenoid valves with technopolymer or aluminium body, also available in versions classified for use in potentially explosive environments (Directive 2014/34/EU)

|              |       |                             |       |
|--------------|-------|-----------------------------|-------|
| Series 514/N | 1.247 | Series 514 High Performance | 1.254 |
| Series T514  | 1.249 | Series 515 High Performance | 1.260 |

### ISO 5599/1 valves and solenoid valves

Valves and solenoid valves according to standard ISO 5599/1 available in 3 sizes with M12 5/2, 5/3 connectors, aluminium and technopolymer body

Series 1000 - Size 1, 2 and 3 1.264

Series 1000-M12 - Size 1, 2 and 3 1.281

## Accessories

### Pneumatic circuit accessories

Flow control valves, quick exhaust valves, selectors, silencers, unidirectional valves, manifolds, blocking valves, economizers, gang mounting manifolds, spray valves

Series 600 - M5 - G1" 1.288

### Complementary valves

Pressure switches, impulse generators, timers, two hands safety valve, oscillator valve, signal amplifier, progressive start up valve, high-low pressure device

Series 900 1.302

### Blocking valves

Unidirectional and bidirectional blocking valves, aluminium and technopolymer versions, with G1/8" - G1/4" - G3/8" - G1/2" connections

Series 50-T50 1.310

### Function fittings

Miniaturised logic function with technopolymer body:  
RFU, RP, VB, VSR, VS-or, VS-and, IP, AP, RP+IP, VB+RFU, VB+VSR

Series 55 Tecno-FUN 1.315

### Miniaturised pressure regulators

Brass versions rod G1/8" and with technopolymer body and integrated gauge version

Series 1750 - 1760 1.330

### Compact fittings for lubrication

Nichel plated brass compact fittings, with straight male adaptor

Series Mini-RAP 1.332

## Valves and solenoid valve manifolds

Wide range of multipolar and serial system, available with main fieldbus protocols

Series PX 1.334

Series 2200 Optyma-Sc 1.429

Series 2700 EVO 1.465

Series 3000 EVO 1.355

Series 2500 Optyma-F EVO 1.438

EVO Electronics 1.486

Series 2200 Optyma-S EVO 1.408

Series 2500 Optyma-T EVO 1.451

Series 2300 Enova® 1.504

## Section 02 Air treatment

### Air service units

Wide range of components for compressed air treatment, available in aluminium, technopolymer and steel, in several sizes with connections from 1/8" to 1" and flow rates up to 8000 NI/min.

|                |     |                        |       |
|----------------|-----|------------------------|-------|
| Air quality    | 2.1 | Series 1700            | 2.85  |
| Series AIRPLUS | 2.2 | Series 1700 Steel line | 2.159 |

### Proportional technology

The proportional pressure regulators range includes 3 product series: 1700 standard, 1700 miniaturised and WPR (Wide Pressure Regulators).

|                      |       |                          |       |            |       |
|----------------------|-------|--------------------------|-------|------------|-------|
| Series 1700 standard | 2.176 | Series 1700 miniaturised | 2.192 | Series WPR | 2.208 |
|----------------------|-------|--------------------------|-------|------------|-------|

### Measuring devices

Digital pressure switches and pressure gauges, panel mounting or manifold versions.

|                             |       |                           |       |
|-----------------------------|-------|---------------------------|-------|
| Pressure switches Series DS | 2.215 | Pressure gauges Series DS | 2.217 |
|-----------------------------|-------|---------------------------|-------|

### Pressure booster

3 sizes aluminium pressure boosters available or technopolymer with 1:2 compression ratio.

|             |       |           |       |
|-------------|-------|-----------|-------|
| Series 1700 | 2.219 | Series P+ | 2.224 |
|-------------|-------|-----------|-------|

## Section 03 Pneumatic actuation

### Cylinders with piston rod according to standard

#### ISO 6432 Microbore cylinders

Versions available: with threaded end covers, rolled end covers, aluminium, stainless steel and technopolymer versions

|                               |     |                            |      |                         |      |
|-------------------------------|-----|----------------------------|------|-------------------------|------|
| Series 1200                   | 3.1 | Series 1200                | 3.10 | Series 1200, Steel line | 3.18 |
| Threaded end covers cylinders |     | Rolled end covers MIR      |      |                         |      |
| Series 1200 Tecno-MIR         | 3.4 | Series 1200                | 3.13 |                         |      |
|                               |     | Rolled end covers MIR-INOX |      |                         |      |

#### CNOMO-CETOP-ISO cylinders

Cylinders manufactured according to standards CNOMO, CETOP and ISO: standard versions, through rod versions, tandem push with common rod, tandem push with independent rods or opposed tandem with common rod

|                  |      |
|------------------|------|
| Series 1303-1308 | 3.30 |
|------------------|------|

#### Cylinders according to standard ISO 15552

Cylinders according to ISO 15552 with bores from Ø32 to Ø200 mm and strokes up to 1250 mm. Available versions: ECOPLUS with aluminium or technopolymer end plates, ECOLIGHT optimized in weight and dimensions, Steel line completely in stainless steel, round tube versions tie rod (Ø250-Ø320 mm)

|                        |      |                     |      |   |      |
|------------------------|------|---------------------|------|---|------|
| Series 1319-1320-1321  | 3.41 | Series Ecoplus - HP | 3.47 | Series Ecolight with protective bellows | 3.58 |
| Series 1348-1349-1350  | 3.44 | Series Ecolight     | 3.51 | Series 1315 Round tube cylinders        | 3.73 |
| Non rotating cylinders |      | 1390-1391-1392      |      | Series Steel line - AISI 316            | 3.77 |

#### Hydro-pneumatic speed control cylinders according to standard ISO 15552

ISO 15552 Hydro-pneumatic speed control cylinders with internal hydraulic circuit for movement control

|                                |      |
|--------------------------------|------|
| Series 1450 - 1463 - Ø50 - Ø63 | 3.86 |
|--------------------------------|------|

### Compact cylinders according to standard ISO 21287

Compact cylinders according to standard ISO with integrated slots suitable for sensors mounting without adaptors. Bores from Ø20 to Ø100 mm. Versions with end stroke adjustable pneumatic cushioning are also available according to ISO 21287

Series 1500 Ecompact **3.92**

## Cylinders with piston rod not according to standard

### Threaded body microbore cylinders

Special performance microbore cylinders with hexagonal or round body and either completely threaded or threaded with a plain rod ending

Series 1200 **3.108**

Special performance microbore cylinders

### Profile tube cylinders, non rotating

Non rotating cylinders twin rod version, available with bores from Ø32 to Ø100 and strokes up to 500 mm

Series 1325-1326-1345-1347 **3.110**

Twin rod cylinders

### Flat profile cylinders

ECOFLAT cylinders available with sizes from Ø25 to Ø63 mm and strokes up to 300 mm. Profiled tube has two "T" slots to host sensors 1580.\_, MRS.\_, MHS.\_, without adaptors. Two additional connections are also available on rear cover for cylinder feeding

Series ECOFLAT **3.115**

### Hydraulic speed control cylinders

Hydraulic speed control cylinders with outward, inward and outward/inward control, with lateral or in-line tank. Available with SKIP valve (accelerating device) and blocking valve (STOP)

Series 1400 - Ø40 - Ø63 **3.121**

### Compact cylinders

Short stroke and compact cylinders with bores from Ø20 to Ø100 mm, available in single and double acting versions, tandem and through rod with magnetic piston versions. The Europe version is compliant with the ISO or UNITOP standard (depending on bores), while the Ecompact-S versions have connections and rods according to the ISO 15552 standard

Series 1500 - Short stroke cylinders **3.132**      Series 1500 Europe **3.139**      Series Ecompact-S **3.147**

### Multimount cylinders

Multimount cylinders available with bores from Ø10 to Ø25 mm, with strokes up to 50 mm and with magnetic piston versions

Series 6500 **3.152**

### Guided compact cylinders

These cylinders are available in sizes Ø12 to Ø80 mm, and comprise a single compact cylinder with integral guide rods, the rod guide is available in two styles: self-lubricating bronze bushes and bearing bushes

Series 6100-6101-6110 **3.154**

### Slide cylinders

Slide cylinders manufactured with bores from Ø8 to Ø25 mm, with strokes up to 150 mm. Available with simple and double regulation end stroke and also with front and rear shock absorber

Series 6600 **3.168**

## Section 03

### Pneumatic actuation / Cylinders with piston rod not according to standard (following)

#### Slide units

Twin-rod linear guide units with bores from Ø10 to Ø32 mm, and with control unit with bronze bush versions, with control unit with bearing bush versions. Are also available the through twin-rod slide units and the compact slide units

|                                     |       |   |       |                                |       |
|-------------------------------------|-------|---|-------|--------------------------------|-------|
| Series 6200<br>Twin-rod slide units | 3.179 | Series 6210<br>Through twin-rod slide units | 3.183 | Series 6700<br>Guide cylinders | 3.188 |
|-------------------------------------|-------|---|-------|--------------------------------|-------|

## Rodless cylinders

#### Rodless cylinders - Standard

Rodless cylinders with bore from Ø16 to Ø63 mm, and strokes up to 6000 mm, available also with linear control unit

|             |       |                    |       |
|-------------|-------|--------------------|-------|
| Series 1605 | 3.195 | Series 1605 Ø16 mm | 3.206 |
|-------------|-------|--------------------|-------|

## Rotary actuators

#### Rack rotary actuators

Double or single rack & pinion rotary actuators

|  |       |  |       |             |       |
|--|-------|--|-------|-------------|-------|
| Series<br>1330 - 1331 - 1332 - 1333,<br>rotary actuators | 3.211 | Series 6400 - Double rack<br>actuators with turn table | 3.215 | Series 6411 | 3.218 |
|--|-------|--|-------|-------------|-------|

#### Vane type rotary actuators

Vane type rotary actuators with the shaft that runs into ball bearings, available with sizes from Ø10 to Ø100 mm

|             |       |
|-------------|-------|
| Series 6420 | 3.221 |
|-------------|-------|

## Handling

#### Pneumatic grippers

Pneumatic grippers manufactured with 2 angular fingers (from -10° to +30°), wide opening 180°, or 3 finger parallel style. Swing clamp cylinders has been developed to meet the need to clamp a workpiece by means of a clamping arm.

|             |       |           |       |
|-------------|-------|-----------|-------|
| Series 6300 | 3.231 | Series RT | 3.245 |
|-------------|-------|-----------|-------|

## Sensors

#### Magnetic sensors

Magnetic sensors with Reed type or Hall effect

|           |       |
|-----------|-------|
| Series SA | 3.250 |
|-----------|-------|

### Miniaturised magnetic sensors

Miniaturised magnetic sensors with Reed and Hall style versions, available with rectangular, square, square section UL/CSA approved, and round section versions

|           |       |           |       |           |       |
|-----------|-------|-----------|-------|-----------|-------|
| Series SR | 3.262 | Series SQ | 3.267 | Series ST | 3.271 |
| Series SU | 3.266 |           |       |           |       |

## Accessories and fixing devices

### Piston rod lock

Piston rod lock for cylinders with bores from da Ø12 to Ø125 mm

|                    |       |
|--------------------|-------|
| Series 1260 - 1320 | 3.279 |
|--------------------|-------|

### Linear guiding units

Linear guiding units series 1200 (Ø20-25 mm) and series 1320 (from Ø32 to Ø80 mm)

|                    |       |
|--------------------|-------|
| Series 1260 - 1320 | 3.281 |
|--------------------|-------|

### Shock absorbers

Shock absorbers with M8x1-M10x1-M14x1,5-M20x1,5-M27x1,5 threads

|             |       |
|-------------|-------|
| Series 6900 | 3.283 |
|-------------|-------|

## Appendix

# GLOBAL VISION and ITALIAN HEART

Excellence in automation since 1976  
Made in Italy

For more than 45 years, Pneumax has represented Italian excellence worldwide: three business units dedicated to Industrial Automation, Process Automation and Automotive respectively, manufacturing pneumatic components and systems, electric actuators and components for controlling liquid and gaseous fluids, integrating mechanical, electronic and digital skills.

Our presence in over 50 countries around the world is ensured by a network of subsidiaries and authorised distributors. All of our production activity is concentrated in the 10 production units of the Pneumax Group based in Italy. Seven of those units are located in the Pneumax Spa headquarters in Lurano (Bg). In addition to those production plants there are three other companies in the Group: Titan Engineering (San Marino), AutomationWare (Martellago-VE) and Simtech (Lurano-BG).

# EMPOWERING PEOPLE FOR SUSTAINABLE DEVELOPMENT

Enhancing human resources and the local area, respect for the environment and ethical approach to business

---

We believe sustainable development means empowering people, through innovation, acting ethically and being respectful of the environment.

## Our Vision

Efficient organisation, continuous enhancement of skills and technological innovation: is what drives the strategy of Pneumax whose main objective has always been to foster sustainable development and to support its customers as a true technology partner. A result that can only be achieved by providing products and services to meet the different needs of customers.

All this while guaranteeing the highest quality standards and implementing a business model that combines the pursuit of continuous improvement, enhancement of the local area and respect for people and the environment.

The Pneumax Code of Ethics is the document underpinning every company decision to build a business model that values people, relationships and skills.

*Imagining, designing and implementing solutions through the combination of technologies and skills*

The desire to offer solutions specifically designed for the applications of different sectors has led to structuring the production and sales organisation into three Business Units: Industrial Automation, Process Automation and Automotive.

Pneumax Business Units are capable of producing a wide range of components made from different materials, from technopolymers to brass, as well as steel and aluminum, according to the relevant international regulations concerning both production processes and product characteristics.

## TOTAL QUALITY MANAGEMENT

Product quality stems from the quality of the processes and the competence of the people who carry them out

---

Pneumax constantly invest in new product and manufacturing processes. Through research, quality perfection is the target of each company, that operates in compliance with ISO 9001 : 2015, ISO 14001 : 2015, and ISO 45001 : 2018 standards.

Working according to Total Quality means guaranteeing our customers with the highest reliability of our products and services, because the most prestigious certification is the one that comes from the trust of our partners.

## Ongoing Improvement

Measuring, controlling and pursuing perfection

The Pneumax quality department use's the latest measuring technology. Continuously scanning and analyzing components using structured light laser systems that digitize objects to provide dimensional analysis efficiently via dedicated software: 3D High Resolution X-ray Axial Computed Tomography (CT), with which it is possible to scan components, carry out any measurement required, even in areas that are not accessible or not visible with other instruments.

Plastics and elastomers are monitored through the observation of thermograms provided by DSC (differential scanning calorimetry). All metrological information collected in the company's databases is used for conformity assessments and reprocessed according to statistical control models to allow engineers to work on continuous product improvement.

# WORLDWIDE NETWORK

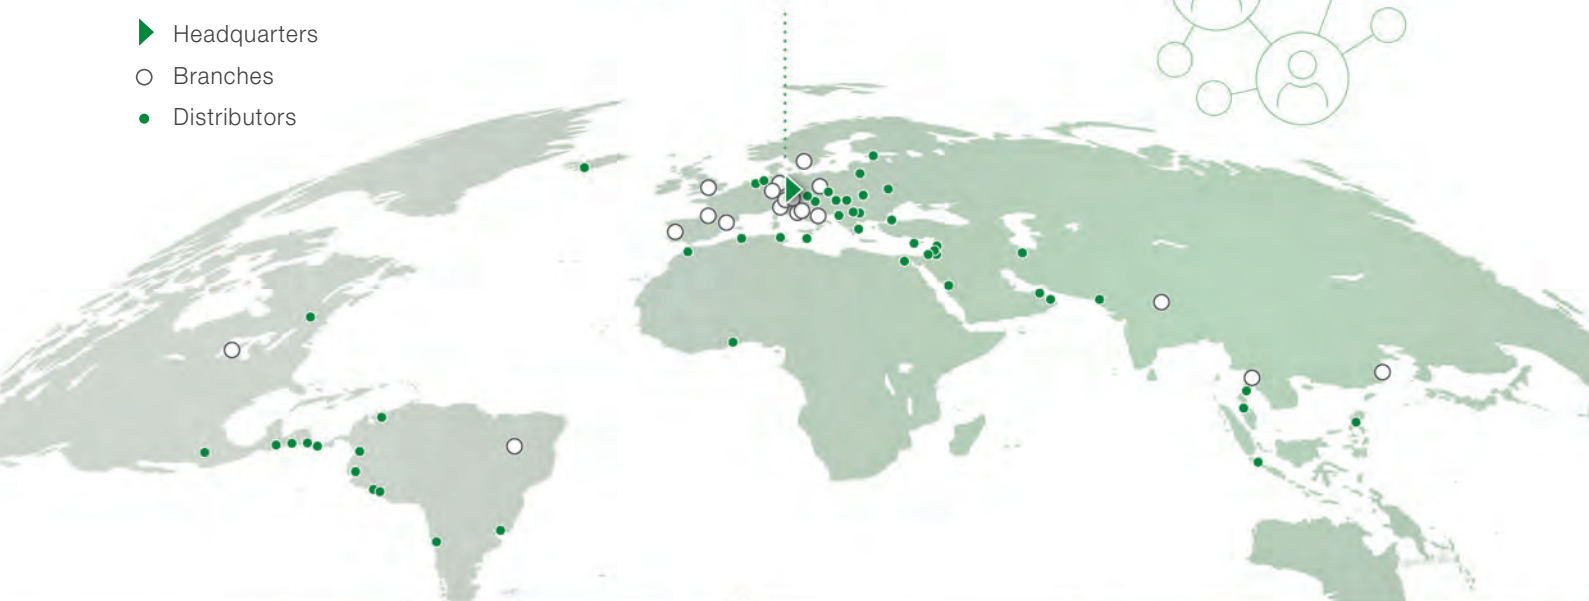

Global vision, local service

Through a network of branches and exclusive distributors, Pneumax operates in over **50 countries** around the world, offering support to its customers throughout every stage of the supply process, from application to after sales assistance.

Each market and each sector has distinctive characteristics that make them unique. The aim of Pneumax network is to provide services that can enhance these peculiarities by working as a true strategic partner.

## Pneumax Business Attitude

An operating model that stems from the ability to combine sector, technology and application expertise through customer collaboration with relevant Sales Engineers, sector Business Specialists and Product Specialists focused on products and technologies.

The BUs, industrial automation, process automation and automotive, constantly interface to transfer the excellence and experience of each sector to the others: from the study of the materials needed in petrochemicals, to the integration of electronics and digital in industrial automation or meeting the quality standards required in automotive processes. An organisation that allows all customers to enjoy the most effective mix of sectoral excellence.

## Poppet valves and solenoid valves

3/2 and 2/2 valves and solenoid valves for compressed air and vacuum, with aluminium and technopolymer body

|   |                        |       |
|---|------------------------|-------|
|  | <b>Series 700</b>      | 1.204 |
|  | <b>Series PG</b>       | 1.207 |
|  | <b>Series T772-773</b> | 1.224 |
|  | <b>Series T771</b>     | 1.239 |

## “NAMUR” valves and solenoid valves

NAMUR valves and solenoid valves with technopolymer or aluminium body, also available in versions classified for use in potentially explosive environments (Directive 2014/34/EU)

|  |                     |       |
|--|---------------------|-------|
|   | <b>Series 514/N</b> | 1.247 |
|  | <b>Series T514</b>  | 1.249 |

|  |                                    |       |
|--|------------------------------------|-------|
|   | <b>Series 514 High Performance</b> | 1.254 |
|  | <b>Series 515 High Performance</b> | 1.260 |

## ISO 5599/1 valves and solenoid valves

Valves and solenoid valves according to standard ISO 5599/1 available in 3 sizes with M12 5/2, 5/3 connectors, aluminium and technopolymer body

|   |                                      |       |
|---|--------------------------------------|-------|
|  | <b>Series 1000 - Size 1, 2 and 3</b> | 1.264 |
|---|--------------------------------------|-------|

|   |  |       |
|---|--|-------|
|  | <b>Series 1000-M12 - Size 1, 2 and 3</b> | 1.281 |
|---|--|-------|

## Accessories

### Pneumatic circuit accessories

Flow control valves, quick exhaust valves, selectors, silencers, unidirectional valves, manifolds, blocking valves, economizers, gang mounting manifolds, spray valves

|   |                              |       |
|---|------------------------------|-------|
|  | <b>Series 600 - M5 - G1"</b> | 1.288 |
|---|------------------------------|-------|

### Complementary valves

Pressure switches, impulse generators, timers, two hands safety valve, oscillator valve, signal amplifier, progressive start up valve, high-low pressure device

|   |                   |       |
|---|-------------------|-------|
|  | <b>Series 900</b> | 1.302 |
|---|-------------------|-------|

### Blocking valves

Unidirectional and bidirectional blocking valves, aluminium and technopolymer versions, with G1/8"- G1/4"- G3/8"- G1/2" connections

|   |                      |       |
|---|----------------------|-------|
|  | <b>Series 50-T50</b> | 1.310 |
|---|----------------------|-------|

### Function fittings

Miniaturised logic function with technopolymer body: RFU, RP, VB, VSR, VS-or, VS-and, IP, AP, RP+IP, VB+RFU, VB+VSR

|   |                            |       |
|---|----------------------------|-------|
|  | <b>Series 55 Tecno-FUN</b> | 1.315 |
|---|----------------------------|-------|

## Accessories (following)

### Miniaturised pressure regulators

Brass versions rod G1/8" and with technopolymer body and integrated gauge version

**Series 1750 - 1760**

1.330

### Compact fittings for lubrication

Nichel plated brass compact fittings, with straight male adaptor

**Series Mini-RAP**

1.332

## Valves and solenoid valve manifolds

Wide range of multipole and serial systems, available with main fieldbus protocols

**Series PX**

1.334

**Series 2500 Optyma-T EVO**

1.451

**Series 3000 EVO**

1.355

**Series 2700 EVO**

1.465

**Series 2200 Optyma-S EVO**

1.408

**EVO Electronics**

1.486

**Series 2200 Optyma-Sc**

1.429

**Series 2300 Enova®**

1.504

**Series 2500 Optyma-F EVO**

1.438

## Series 104

The micro valves 104 series are a cost effective solution with reduced overall dimensions, easy to install and manage. Their main characteristic is the possibility to choose between the version with lateral or rear pneumatic connections realized with quick fitting for Ø4mm tube included.

The valves are available with 2 or 3 ways versions, normally closed or open, 5 ways and 5 ways 3 positions open centres and pressured centres. The 5 ways version is made with two 3 ways valves placed side by side with common inlet.

The operators available for this valve are push button (different versions), selector (key, short and long lever), lever (lever roller or level unidirectional) and pneumatic.

It is also possible to combine the 2 and 3 ways valves with electrical switches, normally closed or open.

### Construction characteristics

|                |   |
|----------------|---|
| Body and cover | Technopolymer                             |
| Spacers        | Technopolymer                             |
| Seals          | NBR                                       |
| Springs        | Spring steel                              |
| Operators      | Plastic material for buttons and switches |
| Pistons        | Aluminium (for pneumatic command version) |
| Spools         | Steel                                     |

### Use and maintenance

This valves have an average life of 15 million cycles depending on the application and air quality.

Filtered and lubricated air using specified lubricants will reduce the wear of the seals and ensures long and trouble free operation.

Please ensure that the valve is being used according with the manufacturers specification, such as air pressure and temperature.

**ATTENTION:** use hydraulic oil class H for lubrication such as CASTROL MAGNA SW32.

1  
AIR DISTRIBUTION

## Series 105

The series 105 consist of a broad range of miniature valves and valves with various type of actuation.

The connections are M5 for this series

Due to their special construction with a balanced spool, these valves can be used interchangeably as 3 ways or 5 ways.

The 3 ways can be used normally closed or normally open and the 5 ways can be fed through the exhausts 3 and 5 with different pressures according to the need.

The spool, as it is moving, isolates the connections without being affected by the inlet pressure.

1  
AIR DISTRIBUTION

### Construction characteristics

|           | M5   |
|-----------|--|
| Body      | Aluminium  |
| Spacers   | Technopolymer  |
| Seals     | NBR  |
| Springs   | Spring steel   |
| Operators | Nickel plated brass<br>Stainless steel for roller levers and button levers;<br>Zinc plated steel for side levers;<br>Plastic material for handles, buttons and switches<br>Aluminium (for pneumatic command version) |
| Pistons   | Aluminium (for pneumatic command version)  |
| Spools    | Steel  |

### Use and maintenance

This valves have an average life of 15 million cycles depending on the application and air quality.

Filtered and lubricated air using specified lubricants will reduce the wear of the seals and ensures long and trouble free operation.

Please ensure that the valve is being used according with the manufacturers specification, such as air pressure and temperature.

The exhaust port of the distributor has to be protected in a dusty and dirty environment.

Repair kits including the spool complete with seals are available for overhauling the valves.

However, although this is a simple operation it should be carried out by a competent person.

**ATTENTION:** use hydraulic oil class H for lubrication such as CASTROL MAGNA SW32.

## Series 200

The series 200 consist of a broad range of valves with various type of actuation.

The connections for this series are from G 1/8" to G 1".

Due to their special construction with a balanced spool, these valves can be used interchangeably as 3 ways or 5 ways.

The 3 ways can be used normally closed or normally open and the 5 ways can be fed through the exhausts 3 and 5 with different pressures according to the need.

The spool, as it is moving, isolates the connections without being affected by the inlet pressure.

### Construction characteristics

|           | G 1/8" - G 1/4" - G 1/2" - G 1"  |
|-----------|--|
| Body      | Aluminium  |
| Spacers   | Technopolymer<br>Aluminium for G1" (211)   |
| Seals     | NBR<br>PUR for 212/2   |
| Springs   | Spring steel   |
| Operators | Aluminium<br>Technopolymer   |
| Pistons   | Technopolymer, for 228 pneumatic command valves Aluminium,<br>for 224, 212, 212/2 and 211 pneumatic command valves |
| Spools    | Steel<br>Aluminium, for 212/2  |

### Use and maintenance

This valves have an average life of 15 million cycles depending on the application and air quality.

Filtered and lubricated air using specified lubricants will reduce the wear of the seals and ensures long and trouble free operation.

Please ensure that the valve is being used according with the manufacturers specification, such as air pressure and temperature.

The exhaust port of the distributor has to be protected in a dusty and dirty environment.

Repair kits including the spool complete with seals are available for overhauling the valves.

However, although this is a simple operation it should be carried out by a competent person.

**ATTENTION:** use hydraulic oil class H for lubrication such as CASTROL MAGNA SW32.

## Series T200

The **T200** series, consist of a broad range of valves with various type of actuation. The connections for this series are from G 1/8" to G 1/4". The main components constituting the valves of the Tecno228 series are manufactured with high performance technopolymer.

The use of technopolymer has resulted in a light weight product which can be offered to the market at very interesting prices.

The **T228** valves, are manufactured with G1/8" connections, 3 and 5 ways function, mechanical or pneumatically operated, monostable spring or pneumatic return, bistable and in 5 ways 3 positions version with closed, open and pressured centres.

This series is completely interchangeable with the standard 228 series (with alluminium body).

The **T224** valves, are manufactured with G 1/4" connections, 3/2, 5/2 and 5/3 ways function, (monostable or bistable), depending on version and actuation (manual, pneumatic, or electrical), and self aligning (pneumatic, electric or spring).

### Maximum fitting torque

| Thread | Maximum torque (Nm) |
|--------|---------------------|
| G 1/8" | 4                   |
| G1/4"  | 9                   |

### Construction characteristics

|           | G 1/8" (T228) and G 1/4" (T224)  |
|-----------|--|
| Body      | Technopolymer  |
| Operators | Technopolymer  |
| Seals     | NBR  |
| Spacers   | Technopolymer  |
| Spools    | Technopolymer<br>Stainless steel only for the versions<br>Push button-Spring and Lever lateral |
| Springs   | Spring steel   |
| Pistons   | Technopolymer  |

### Use and maintenance

This valves have an average life of 15 million cycles depending on the application and air quality.

Filtered and lubricated air using specified lubricants will reduce the wear of the seals and ensures long and trouble free operation.

Please ensure that the valve is being used according with the manufacturers specification, such as air pressure and temperature.

The exhaust port of the distributor has to be protected in a dusty and dirty environment.

Repair kits including the spool complete with seals are available for overhauling the valves.

However, although this is a simple operation it should be carried out by a competent person.

**ATTENTION:** use hydraulic oil class H for lubrication such as CASTROL MAGNA SW32.

## Series 800

The trend towards the miniaturization of components has been consolidated. The use of new technologies makes it possible to manufacture components with high flow rates but extremely compact sizes. Electric piloting is by means of low-absorption miniature solenoids which are easily connected to the electronic control systems of machines (PLC).

Another object of study have been manifolds and multiple bases for ganged assembly of valves or solenoid valves with option for having outlets 2 and 4 either on the valve body or on the base through threaded holes or integrated quick connections provided.

Versions 3/2 and 5/2 are fitted with pneumatic and electropneumatic controls with resetting by mechanically or pneumatically operated spring, or by pneumatic or electropneumatic operation on the bistable versions.

The basic difference between this type of distributors and the others we produce, based on the spool system, lies in the fact that the seals rest on the spool and are dynamic, instead of being locked into the spool the valve body by means of spacers; by this means a compact size is obtained and the distributors can be slotted into bases and manifolds by means of two screws.

1  
AIR DISTRIBUTION

### Construction characteristics

|           |                 |
|-----------|-----------------|
| Body      | Aluminium       |
| Seals     | HNBR            |
| Springs   | Stainless steel |
| Operators | Aluminium       |
| Pistons   | Aluminium       |
| Spools    | Aluminium       |

### Use and maintenance

These valves have an average life of 15 million cycles depending on the application and air quality. Filtered and lubricated air using specified lubricants will reduce the wear of the seals and ensures long and trouble free operation. Please ensure that the valve is being used according with the manufacturers specification, such as air pressure and temperature. The exhaust port of the distributor has to be protected in a dusty and dirty environment. Repair kits including the spool complete with seals are available for overhauling the valves. However, although this is a simple operation it should be carried out by a competent person.

**ATTENTION:** use hydraulic oil class H for lubrication such as CASTROL MAGNA SW32.

### How to order the solenoid valves

Example:

**805.52.0.1.01** Solenoid valves with miniature solenoid 12 V D.C.

List of codes for tensions:

01 = miniature solenoid 12 VDC

02 = miniature solenoid 24 VDC

05 = miniature solenoid 24 VAC

06 = miniature solenoid 110 VAC

07 = miniature solenoid 220 VAC

The electropilot utilized is a 15 mm 3/2 N.C. miniature solenoid with faston and 1.1 mm orifice

Miniature solenoid homologated are available c  US (see series 300)

## Series 888

Competitively priced, good performance and versatility combined with a compact design are the main characteristics of this new series of valves. The aluminium valve body and spool/seal arrangement optimize both the flow rate and the valve switching time. This series of valves are available with G1/8" and G1/4" ports in 3/2, 5/2 and 5/3 versions. Monostable or bistable versions are available and include an integrated technopolymer solenoid operator with 9mm stem and built in manual override.

**Solenoid valves series 888 are available in point-to-point and serial configurations.**

**For serial system specifications, see Optyma-F series.**

The valves can be supplied with or without the solenoid coil, however, if the solenoid coil is required please refer to the following table:

| Voltages                             |             | Coil Code | Voltage Code |
|--------------------------------------|-------------|-----------|--------------|

### Construction characteristics

|           |   |
|-----------|---|
| Body      | Aluminium   |
| Seals     | NBR   |
| Springs   | Spring steel  |
| Operators | Technopolymer<br>Aluminium for spring bottom plates |
| Pistons   | Technopolymer                                       |
| Spools    | Aluminium   |

### Use and maintenance

These valves have an average life of 15 million cycles depending on the application and air quality, filtered and lubricated air using specified lubricants will dramatically reduce the wear of the seals and ensures long and trouble free operation.

Please ensure that the valve is being used according with the manufacturers specification, such as air pressure and temperature.

The exhaust ports 3 and 5 must be protected against the possible ingress of dirt or debris.

Repair kits including the spool complete with seals are available for overhauling the valves; however, although this is a simple operation it should be carried out by a competent person.

**Manifold layout Configuration Point to Point**

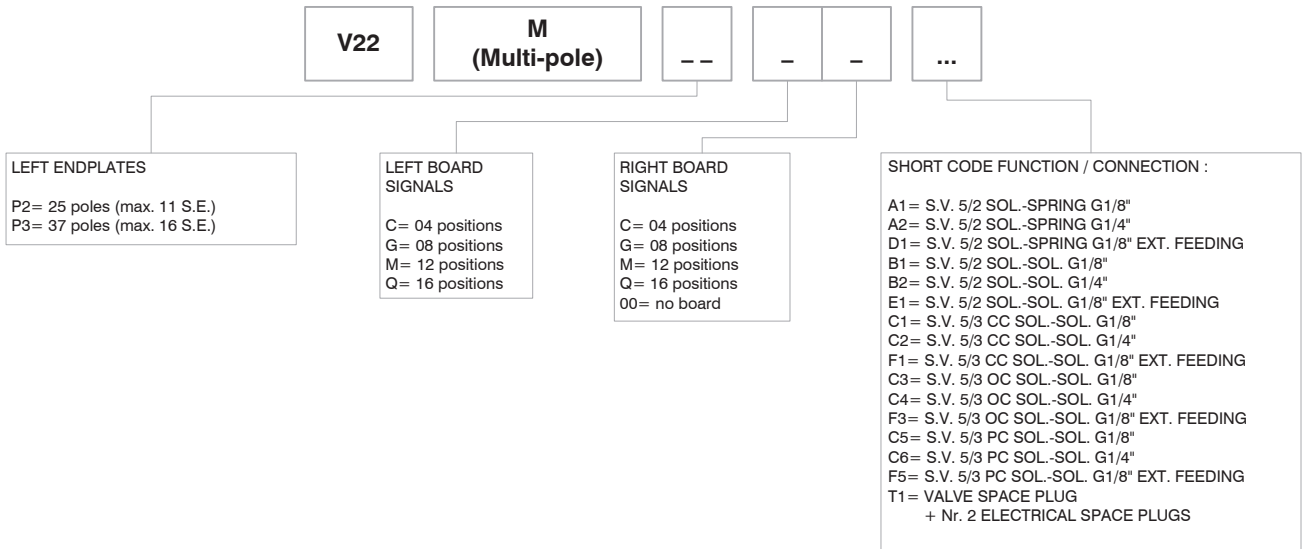

**3/2 valves**

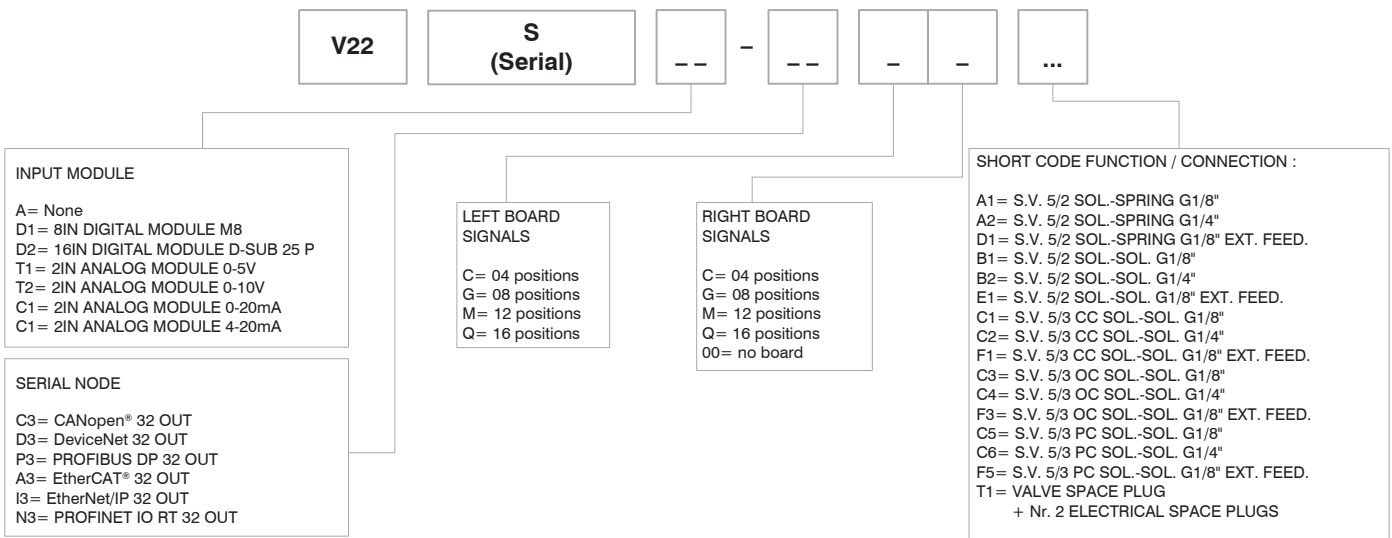

**5/2 valves**

**Manifold layout Configuration Multi-pole**

**Serial manifold layout (for the serial system node, see the Optyma-F Series)**

**NOTE:**

When constructing the configuration, please consider that the maximum number of valves that can be mounted on the manifold is 16, regardless of the valve type. Any valve position presents two electrical connections: in case of use of monostable valves (A1-A2) it will be necessary to assemble a plug to protect the unused electrical connection.

The correspondence between the electrical signal and its location on the manifold is showed in the following diagrams.

1 AIR DISTRIBUTION

1  
AIR DISTRIBUTION

Connector 25 Poles from 1 to 11  
Positions E.V. Bistable / Monostable

1 - 22 = SIGNALS  
23 - 24 = GND  
25 = NC

Connector 37 Poles from 1 to 16

1 - 32 = SIGNALS  
33 - 35 = GND  
36 - 37 = NC

**Assembly sequence**

1  
AIR DISTRIBUTION

**1** POSITION SEALS ON THE MODULAR SUB-BASE

**3** POSITION THE FIRST MODULAR SUB-BASE USING THE 2 CAP HEAD SCREWS (ALLEN KEY 2.5)

**5** ASSEMBLE PRE-LUBRICATED 'O' RINGS TO END PLATE

**2** POSITION THE PRE-LUBRICATED 'O' RINGS

**4** ASSEMBLE SUB-BASE, ENSURE PRE-LUBRICATED 'O' RINGS STAY IN POSITION

**6** ASSEMBLE FINAL SUB-BASE WITH SCREWS

**7** FIX END PLATE WITH 4 SCREWS, TORX TYPE T10 (MAX TORQUE 0.7 Nm)

**8** ASSEMBLE PRINTED CIRCUIT BOARD IN THE MODULAR SUB-BASE HOUSING, PUSH UNTIL CONNECTION IS MADE WITH THE END PLATE

**9** CHECK THE PRINTED CIRCUIT BOARD IS IN THE CORRECT POSITION BY LOOKING TO SEE IF IT'S ALIGNED WITH THE SUB BASE SLOTS OR BY INSERTING A COIL INTO POSITION

**10** CLOSE THE LAST SUB-BASE USING PLUGS AND SCREWS (TORX T20)

**11** FIT THE SEALS IN POSITION AND SLACKEN THE COIL RETAINING CAP BEFORE TIGHTENING THE VALVE TO THE SUB BASE WITH THE CAP HEAD SCREWS (0.7 Nm). TIGHTEN THE COIL RETAINING CAP

**12** IF USING THE BLANKING PLATES ON THE ELECTRICAL CONNECTOR TIGHTEN TO A MAX 0.35 Nm TORQUE

## Series 400

These are 2 stage valves actuated electro-pneumatically. A serie 300 directly operated solenoid valve actuates pneumatically the principal power distributor.

This integrated system allows configurations of systems requiring very little space.

The pilot air is normally taken from the inlet port (autofeed) and the only actuating signal is electric.

The range of the solenoid valves, as far as dimensions and mechanical construction, is similar to series 200.

We have therefore solenoid valves G 1/8", G 1/4", G 1/2" and G 1" with identical pneumatic characteristics that are, however, actuated electrically.

They have a balanced spool, insensitive to presence or absence of pressure. They are constructed in 3 and 5 way with 1 solenoid (monostable) or 2 solenoids (bistable) and also 5 ways 3 positions with closed centres, open centres and pressured centres.

It should be noted that the autofeed of the electric pilot requires always inlet through port 1 and if a 3 ways normally open configuration is desired, it is necessary to switch the operators.

Please note that while the microsolenoid can be mounted in any direction, standard solenoid requires mounting as indicated in the photographs and diagrams.

**The order codes pertain only to the solenoid valve with mechanical actuator "M2" or solenoid "S\*" already assembled.**

**M2 coils are not included and have to be ordered separately (see Series 300).**

**Coils for M2 and solenoids "S" homologated are available in RU (see Series 300).**

The solenoid valves **G1/8" (488)**, are supplied complete with coil (see Series 300) so that the tension has to be added to the solenoid valve code:

**M9** = coil 24 V D.C. (rating power 2 Watt)

**M11** = coil 24 V D.C. (rating power 3.8 watt)

**M56** = coil 24 V 50/60 Hz (rating power 9 VA)

**M57** = coil 110 V 50/60 Hz (rating power 9 VA)

**M58** = coil 230 V 50/60 Hz (rating power 9 VA)

"Shifting time of pneumatic directional control valves or moving parts, logic devices were measured in accordance to ISO 12238:2001"

### Construction characteristics

|           |  |
|-----------|--|
| Body      | Aluminium  |
| Spacers   | Technopolymer (aluminium for G1")  |
| Seals     | NBR<br>Polyurethane compound for oil free applications (G 1/8", G 1/4" and G 1/2")                 |
| Springs   | Stainless steel or spring steel  |
| Operators | Aluminium<br>Technopolymer for spring bottom plate G 1/8", G1/4", G 1/2"<br>and aluminium for G 1" |
| Spools    | Steel  |

### Use and maintenance

This valves have an average life of 15 million cycles depending on the application and air quality.

Filtered and lubricated air using specified lubricants will reduce the wear of the seals and ensures long and trouble free operation.

Please ensure that the valve is being used according with the manufacturers specification, such as air pressure and temperature.

The exhaust port of the distributor has to be protected in a dusty and dirty environment.

Repair kits including the spool complete with seals are available for overhauling the valves.

However, although this is a simple operation it should be carried out by a competent person.

**ATTENTION:** use hydraulic oil class H for lubrication such as CASTROL MAGNA SW32.

**Solenoid - Spring**

## Series T400

The Series **T400** involves a wide range of valves and solenoid valves, with several type of acting, with connections from **G1/8" (T488)** and **G1/4" (T424)**, are manufactured with high performance technopolymer.

The use of technopolymer has resulted in a light weight product which can be offered to the market at very interesting prices. The gang mounted solenoid valves are available with the traditional manifold obtained from bored square bar of series 600 and with the extruded aluminium base allowing a unique inlet port conveying the exhausts. The base is also prearranged to be fixed on DIN 46277/3 guide.

The Valves and Solenoid valves **G1/8" (T488)** are: 5 ways function, pneumatically operated, single solenoid (monostable) mechanical or pneumatic spring return, spring or pneumatic return, with 2 coils (bistable) and in 5 ways 3 positions version with closed, open and pressured centres.

The solenoid valves are supplied complete with coil (see Series 300) so that the tension has to be added to the solenoid valve code:

- M9** = coil 24 V D.C. (rating power 2 Watt)
- M11** = coil 24 V D.C. (rating power 3.8 watt)
- M56** = coil 24 V 50/60 Hz (rating power 9 VA)
- M57** = coil 110 V 50/60 Hz (rating power 9 VA)
- M58** = coil 230 V 50/60 Hz (rating power 9 VA)

The Solenoid valves **G1/4" (T424)**, are manufactured, depending on version and actuation (manual, pneumatic, or electrical), and self aligning (pneumatic-electric or spring) 3/2, 5/2 and 5/3 ways function, (monostable), (bistable).

The solenoid valves are supplied complete with coil so that the tension has to be added to the solenoid valve code.

- B04** = coil 12 V D.C.
- B05** = coil 24 V D.C.
- B09** = coil 24 V (2W) D.C.
- B56** = coil 24 V 50/60 Hz
- B57** = coil 110 V 50/60 Hz
- B58** = coil 230 V 50/60 Hz

"Shifting time of pneumatic directional control valves or moving parts, logic devices were measured in accordance to ISO 12238:2001"

### Construction characteristics

|              |                                       |
|--------------|---------------------------------------|
| Body         | Technopolymer                         |
| Spacers      | Technopolymer                         |
| Seals        | NBR                                   |
| Pistons seal | NBR                                   |
| Springs      | AISI 302 stainless steel              |
| Operators    | Technopolymer                         |
| Pistons      | Technopolymer                         |
| Spools       | Nickel - plated steel / Technopolymer |

### Maximum fitting torque

| Thread | Maximum torque (Nm) |
|--------|---------------------|
| G 1/8" | 4                   |
| G1/4"  | 9                   |

### Use and maintenance

This valves have an average life of 15 million cycles depending on the application and air quality.

Filtered and lubricated air using specified lubricants will reduce the wear of the seals and ensures long and trouble free operation.

Please ensure that the valve is being used according with the manufacturers specification, such as air pressure and temperature.

The exhaust port of the distributor has to be protected in a dusty and dirty environment.

Repair kits including the spool complete with seals are available for overhauling the valves.

However, although this is a simple operation it should be carried out by a competent person.

**ATTENTION:** use hydraulic oil class H for lubrication such as CASTROL MAGNA SW32.

**Pneumatic - Spring**

## Series 2100 - 2400 - 2600

This solenoid valves series have been developed to meet requirements for electronically controlled pneumatic systems and / or serial control systems already used in all manufacturing sectors. They have been designed to be easily assembled into groups or manifolds and include integral electrical connection (2100 and 2400), to facilitate simple and speedy integration into a control system. The series comprises a range of products classified according to type, size and performance. There are three main sizes, 10mm., 18 mm. and 26 mm., with each size further divided into 3 types "LINE", "FLAT" and "VDMA" or "BASE". The 10 mm and 18 mm 24 VDC range of valves includes a range of accessories for the production of manifolded valve assemblies with integral electrical connections. Modules are available in two or four station variants for flexibility and are supplied to IP40 or alternatively IP65 environmental protection.

### Use and maintenance

The average life of the valve exceeds 50.000.000 cycles when used under optimum conditions. Adequate lubrication reduces seals wear, just as proper filtering of supply air prevents the build-up of dirt that can cause malfunction. Ensure the valve is used within our recommended criteria for pressure and temperature. In dirty or dusty environments, the exhaust ports should be protected. Seals kits are available for repairs. Repairs must be made exclusively by specialized personnel.

AIR DISTRIBUTION

## Series 2100

This solenoid valves series has been developed to meet requirements for electronically controlled pneumatic systems and / or serial control systems already used in all manufacturing sectors.

They have been designed to be easily assembled into groups or manifolds and include integral electrical connection to facilitate simple and speedy integration into a control system.

The 2100 series comprises a range of products classified according to the body size of 10 mm divided into 3 types "LINE", "FLAT" and "BASE". The 10mm. and 18 mm. 24 VDC range of valves includes a range of accessories for the production of manifolded valve assemblies with integral electrical connections.

Modules are available in two or four station variants for flexibility and are supplied to IP40 or alternatively IP65 environmental protection.

|                   |   |
|-------------------|---|
| Central body      | Extruded aluminium bar with chemical nickel treatment and PTFE (polytetrafluorethylene) |
| Connection plates | Technopolymer   |
| Spool seals       | Oil resistant nitrile rubber-HNBR   |
| Springs           | AISI 302 stainless steel  |
| Operators         | Technopolymer   |
| Pistons           | Aluminium 2011  |
| Spools            | Aluminium 2011  |

### Ordering codes for miniature solenoid valves

The 10 mm. miniature solenoid valve with 0,7 mm. orifice has been selected for piloting this series of valves (see Series 300).

This results in low response times and reduced power consumption.

The valve can be supplied with the coil upward or downward depending on the application.

Codes are as follows:

#### Coil upward code

- 01 = miniature sol. + 12 V DC 90°conn. with LED
- 21 = miniature sol. + 12 V DC line conn. with LED
- 02 = miniature sol. + 24 V DC 90°conn. with LED
- 22 = miniature sol. + 24 V DC line conn. with LED

#### Coil downward code

- 11 = miniature sol. + 12 V DC 90°conn. with LED
- 31 = miniature sol. + 12 V DC line conn. with LED
- 12 = miniature sol. + 24 V DC 90°conn. with LED
- 32 = miniature sol. + 24 V DC line conn. with LED
- 91 = miniature sol. + 12 V DC for integral electrical connections
- 92 = miniature sol. + 24 V DC for integral electrical connections

Miniature solenoid c  homologated are available (see Series 300).

### Use and maintenance

The average life of the solenoid valve exceeds 50.000.000 cycles when used under optimum conditions.

Adequate lubrication reduces seals wear, just as proper filtering of supply air prevents the build-up of dirt that can cause malfunction.

Ensure the valve is used within our recommended criteria for pressure and temperature.

In dirty or dusty environments, the exhaust ports should be protected.

Seals kits are available for repairs.

Repairs must be made exclusively by specialized personnel.

The integral electrical design for the series 2100 valve is extremely flexible, allowing the production of pre-wired solenoid valve manifolds, the configuration of which can be determined at the point of assembly. The 24 VDC, 12 VDC (equivalent PNP) modules are available with 2 or 4 positions. The system assembled is designed for an IP40 - IP65 protection.

Coil type 91 or 92 is required for the multipin electrical connection (see valve ordering codes).

1  
AIR DISTRIBUTION

Support plates are supplied to mount the electrical connection elements to the manifold modules. Individual valves can still be removed from the manifold even after assembly is complete. One support plate is required per element.

The elements connect together using an upper coupling and lower fixing screw.

It is possible to use the 2 position element as the first terminal on 2, 6, 10, 14 position assemblies.

On single solenoid assemblies electrical connection is made using an D-SUB 25 multi-connector.

Up to 16 valves can be operated by using 4x4 position elements.

On double solenoid assemblies electrical connection is made using an D-SUB 37 multi-connector.

## Series 2400

This solenoid valves series has been developed to meet requirements for electronically controlled pneumatic systems and / or serial control systems already used in all manufacturing sectors. They have been designed to be easily assembled into groups or manifolds and include integral electrical connection to facilitate simple and speedy integration into a control system. The 2400 series comprises a range of products classified according to the body size of 18 mm divided into 3 types "LINE", "FLAT" and "VDMA". The 10mm. and 18 mm. 24 VDC range of valves includes a range of accessories for the production of manifolded valve assemblies with integral electrical connections. Modules are available in two or four station variants for flexibility and are supplied to IP40 or alternatively IP65 environmental protection.

### Construction characteristics

|                   |   |
|-------------------|---|
| Central body      | Extruded aluminium bar with chemical nickel treatment and PTFE (polytetrafluorethylene) |
| Connection plates | Zinc alloy  |
| Spool seals       | Oil resistant nitrile rubber-HNBR   |
| Springs           | AISI 302 stainless steel  |
| Operators         | Technopolymer   |
| Pistons           | Technopolymer   |
| Spools            | Aluminium 2011  |

### Use and maintenance

The average life of the solenoid valve exceeds 50.000.000 cycles when used under optimum conditions. Adequate lubrication reduces seals wear, just as proper filtering of supply air prevents the build-up of dirt that can cause malfunction. Ensure the valve is used within our recommended criteria for pressure and temperature. In dirty or dusty environments, the exhaust ports should be protected. Seals kits are available for repairs. Repairs must be made exclusively by specialized personnel.

### Ordering codes for miniature solenoid valves

The 15 mm. miniature solenoid valve with 1,1 mm. orifice has been selected for piloting this series of valves (see Series 300). This results in low response times and reduced power consumption. The valve can be supplied with the coil upward or downward (multipolar connections) depending on the application.

Codes are as follows:

#### Coil upward code

- 01 = miniature sol. + 12 V DC
- 02 = miniature sol. + 24 V DC
- 05 = miniature sol. + 24 V AC
- 06 = miniature sol. 110 V AC
- 07 = miniature sol. 230 V AC
- 08 = miniature sol. + 24 V DC 1W
- 09 = miniature sol. + 24 V DC Earth faston

#### Coil downward code

- 11 = miniature sol. + 12 V DC
- 12 = miniature sol. + 24 V DC
- 15 = miniature sol. + 24 V AC
- 16 = miniature sol. 110 V AC
- 17 = miniature sol. 230 V AC
- 18 = miniature sol. + 24 V DC 1W
- 19 = miniature sol. + 24 V DC Earth faston

The integral electrical design for the series 2400 valve is extremely flexible, allowing the production of pre-wired solenoid valve manifolds, the configuration of which can be determined at the point of assembly. The 24 VDC, 12 VDC (equivalent PNP) and 24 VAC\* modules are available with 2 or 4 positions. The system assembled is designed for an IP40 protection. IP65 is available on request.

\* Attention : If the working tension is 24 VAC DO NOT using modules with protection diode

## Series 2600

They have been designed to be easily assembled into groups or manifolds.

The 2600 series comprises a range of products classified according to the body size of 26mm divided into 3 types "LINE", "FLAT" and "VDMA". Is not included the integral electrical connection

### Construction characteristics

|                   |   |
|-------------------|---|
| Central body      | Extruded aluminium bar with chemical nickel treatment and PTFE (polytetrafluorethylene) |
| Connection plates | Die-cast aluminium  |
| Spool seals       | Oil resistant nitrile rubber-HNBR   |
| Springs           | AISI 302 stainless steel  |
| Operators         | Technopolymer   |
| Pistons           | Technopolymer   |
| Spools            | Aluminium 2011  |

### Ordering codes for miniature solenoid valves

The 15 mm. miniature solenoid valve with 1,1 mm. orifice has been selected for piloting this series of valves (see Series 300).

This results in low response times and reduced power consumption.

The valve can be supplied with the coil upward or downward (multipolar connections) depending on the application.

Codes are as follows:

#### Coil upward code

- 01 = miniature sol. + 12 V DC
- 02 = miniature sol. + 24 V DC
- 05 = miniature sol. + 24 V AC
- 06 = miniature sol. 110 V AC
- 07 = miniature sol. 230 V AC
- 08 = miniature sol. + 24 V DC 1W
- 09 = miniature sol. + 24 V DC Earth faston

#### Coil downward code

- 11 = miniature sol. + 12 V DC
- 12 = miniature sol. + 24 V DC
- 15 = miniature sol. + 24 V AC
- 16 = miniature sol. 110 V AC
- 17 = miniature sol. 230 V AC
- 18 = miniature sol. + 24 V DC 1W
- 19 = miniature sol. + 24 V DC Earth faston

Miniature solenoid c  US homologated are available (see Series 300).

### Use and maintenance

The average life of the solenoid valve exceeds 50.000.000 cycles when used under optimum conditions.

Adequate lubrication reduces seals wear, just as proper filtering of supply air prevents the build-up of dirt that can cause malfunction.

Ensure the valve is used within our recommended criteria for pressure and temperature.

In dirty or dusty environments, the exhaust ports should be protected.

Seals kits are available for repairs.

Repairs must be made exclusively by specialized personnel.

## Series 300

The direct operated solenoid valve is the interface between pneumatic and electronic. In fact, it is actuated by an electrical signal and in turn gives a pneumatic signal directly available for small users or for actuating bigger pneumatic distributors.

A wide range of valves are needed for satisfying various applications. For this need we have available miniature components with very low volume and electrical impute as well as solenoid valves with large flow rate and power for heavy duty operations. These solenoid valves are usually 3/2, normally closed or normally open, but there are available the 2/2, closed or open, for vacuum and others.

Note that the direct operated valves can only be used with bases, individual or multiple with M5 or G 1/8" thread or with connections.

Some PNEUMAX solenoid valves are  homologated valid for USA and Canada (file n. VAIU2.E206325, VAIU8.E206325). For more details, refer to the coding, in the following pages.

The 10mm and 15mm solenoid valves are certified by UL in compliance with both Canadian and USA safety requirements as recognized component and included in the **UL file E206325** and bear the "UL Recognized Component" marking.

The 10mm and 15mm solenoid valves, since they are devices for "class 2 circuits", according with UL standard UL 429/CSA C22.2 N°139, are not considered dangerous for electric shock or fire and thus a **UL certification is not required for cables and connectors.**

Some solenoid valves, since they are devices for "class 2 circuits", according with UL standard UL 429/CSA C22.2 N°139, are not considered dangerous for electric shock or fire and thus a **UL certification is not required for cables and connectors.**

### Use and maintenance

Maintenance is normally not required for these components therefore the spare parts list is not provided.

Their construction complexity and low cost do not make repair economically viable. It's easier and more economic to replace the complete valve in case of malfunction.

For proper lubrication use only hydraulic oil class H such as Castrol type MAGNA GC 32.

This series of directly operated valves is characterized by its reduced dimensions. They are designed to be mounted individually or on manifold. The high operating speed and high flow rate in consideration of the reduced dimensions, in combination with the high compatibility of the material used to manufacture them ensure a high variety of possible application fields.

All valves have manual override as standard and are available in 3/2 configuration N.O. and N.C. as well as 2/2 N.C. both 12 or 24 V DC or AC. Electrical connection can be via co moulded cables or via connector, in this configuration a LED indicates the coil status. Ensure that the fixing screws are tightened with 0.15Nm maximum.

The 10mm Speed-up version are built in accordance to the ISO 15218-2003 standard with a flow rate of 24NI/min. The coil integrates a dedicated circuit board which enables to contain the power consumption to 0.35W in case of the high flow rate version and to 0.1W in case of the standard flow rate version.

**Functional schematics for Speed-up version**

- 1 = SUPPLY PORT
- 2 = OUTLET PORT
- 3 = EXHAUST PORT

**Construction characteristics:**

**Electrical part:**

Miniature solenoid consisting of a coil made of copper wire of different diameters depending on voltage, isolated according to "F" class standard, with injection-moulded nylon-glass application. All parts forming the cladding, the electrical connections and the pole pieces are protected against corrosion.

**Mechanical part:**

Stainless steel 430F armatures FPM poppets body in thermoplastic material and manual override and plug in nickel plated brass. Valves must be mounted on single or multiple manifold to be used.

This direct operated solenoid valve has minimum overall dimensions (15 mm wide). Its construction method is same as 10 mm valve, of course.

It is suitable to be single or gang mounted or as electro-operator for larger air flow distributors.

Can be utilized with compressed air and other fluids compatible with material used to build the solenoid valve.

The available versions, all equipped with manual override, are 3 ways, normally closed and normally open with DC and AC 50/60 Hz.

It's possible to install the N.O. valve on N.C. interface by using the registered reverse system included in the valve body.

The electrical connection is made with cables (300 mm.), FASTON or with connector.

This type of miniature solenoid valve is interchangeable with most of the same products available on the market.

Coil can also be positioned at 180° to get the electrical connection located on the opposite side than override.

Make sure that the fastening screws are tightened with maximum torque of 0,75 Nm.

1 AIR DISTRIBUTION

### Functional schematics

- 1 = SUPPLY PORT
- 2 = OUTLET PORT
- 3 = EXHAUST PORT

Normally Closed (N.C.) 3/2

Normally Open (N.O.) 3/2

### Construction characteristics

#### Electrical part

Miniature solenoid consisting of a coil made of copper wire of different diameters depending on voltage, isolated according to "F" class standard, with injection-moulded nylon-glass application. All parts forming the cladding, the electrical connections and the pole pieces are protected against corrosion.

#### Mechanical part

AISI 430F cores, AISI 302 return springs, FPM poppets, thermoplastic polyester body.

### 15mm Solenoid valves Manifold with electric multipoint connection

Also for this 15mm solenoid valves series we have realized the possibility of the assembling on the base with multipoint connection, this for making faster the connection and the harness of them.

Realized from a shaped outline, it results compact because it uses a relevant multipoint connection available only with a 37 poles connector from 10 to 32 solenoid valves (with steps of 2), available in line or at 90° and IP40 protection. On the base it is possible to put some threaded cartridges with push-in fittings for Ø3 – Ø3,17 Ø4 tube or M5 threaded.

The application field of these new configurations is the standard of 3/2 valves, where it is needed to realize groups or Manifolds provided with integrated electric connection to make easier and faster the connection and the harness of them (control of single acting cylinders with small dimensions, pilot system of valves with bigger dimensions etc..).

#### Constructive characteristics:

##### Constructive principle:

From 10 up to 32 solenoid valves (with steps of 2)

Extremely compact solution

IP40 protection (without visualisation led)

Possibility of having different working connections (Ø3, Ø3,17, Ø4 tubes, M5)

The new coding key requires the use of the same type of solenoid valves (there aren't codes for groups with a mixed configuration).

**Construction characteristics**

**Electrical parts:** Solenoids: the solenoid consist of coils having different diameter copper wire windings insulated according standards "H"; they are encased in a nylon-glass compound. All parts are corrosion resistant.

**Mechanical parts:** Nickel plated brass tube nitrile viton seals stainless steel plunger (AISI 430F), stainless steel adjusted springs, viton poppet seals, tropicalized zinc alloy interface plate, nickered brass manual override, nickel steel coil lock nut, zinc steel mounting screw. To be usable, the solenoids and microsolenoids have to be attached either to a base or directly to the distributor's operators by means of connectors M5 or G 1/8". These solenoids are available in all voltages and frequencies used in the world. The following are the technical characteristics of the solenoid.

1 AIR DISTRIBUTION

(\*) "Shifting time of pneumatic directional control valves or moving parts, logic devices were measured in accordance to ISO 12238:2001, Pneumatic fluid power - Directional control valves - Measurement of shifting time"

## Maintenance and replacement parts

Maintenance practices for these valves are similar to those already detailed for other products- replacement of the plunger or poppet is not advisable since the new replacement would not provide the best fit with the rest of the already used valve. Special care should be taken that no dirt is accumulated between the working surface of fixed core and the plunger which would result in vibrations and overheating of the solenoid. In the case of microsolenoid it must be assured that the alternate current coil is not charged when the mechanical part is not mounted to avoid destruction of the coil. The electrical connections have to be perfect, especially where low currents are used (12-24V). Oxidation of contacts between the connector and the coil can lead to intermittent malfunctions which are difficult to trace. Oxidation of contacts due to humidity or corrosive atmosphere are one of the most common causes of false alarms. Clean the contacts with appropriate spray.

### Functional schematic

### Construction characteristics

**Electrical parts:** Solenoids: the solenoid consist of coils having different diameter copper wire windings insulated according standards "H"; they are encased in a nylon-glass compount. All parts are corrosion resistant.

**Mechanical parts:** Nickel plated brass tube nitrile (NBR) stainless steel plunger (AISI 430F), stainless steel adjusted springs, viton poppet seals, tropicalized zinc alloy interface plate, nickered brass manual override, Technopolymer coil lock nut, zinc steel mounting screws. Electrical connectors are standard.

### Maintenance and replacement parts

Maintenance practices for these valves are similar to those already detailed for other products - replacement of the plunger or poppet is not advisable since the new replacement would not provide the best fit with the rest of the already used valve.

Special care should be taken that no dirt is accumulated between the working surface of fixed core and the plunger which would result in vibrations and overheating of the solenoid. In the case of microsolenoid it must be assured that the alternate current coil is not charged when the machanical part is not mounted to avoid destruction of the coil.

The electrical connections have to be perfect, especially where low currents are used (12-24 V). Oxidation of contacts between the connector and the coil can lead to intermittent malfunctions which are difficult to trace. Oxidation of contacts due to humidity or corrosive atmosphere are one of the most common causes of false alarms. Clean the contacts with appropriate spray.

## BISTABLE

The most interesting aspects of this bistable miniature solenoid valve operating with D.C. only, is that it can be commuted with a simple electric impulse and stay commuted till an inverted polarity impulse deactivates it. It means that the valve is not automatically deactivated if current fail as happens with normal solenoid valves.

The applications differ but are all based on above mentioned feature.

The internal construction is relatively special. The fix plunger is equipped with a permanent magnet that hold or release the mobile plunger according to the magnetic field generated by the coil.

A specific coil is used for this application and it cannot be replaced by the standard ones.

Ordering code is **MBB5**.

### Electric pilot CNOMO (coil not included)

Mechanics with base for solenoid to be used where an electric pilot system is required. May be used on all sizes and is standardized as an interface on the distributor.

The base is fitted with a manual control which is pulse actuated, without check, or with two stable positions, actuated by means of a screwdriver (pressing down and turning clockwise by 90°). Two different types of solenoids can be mounted on the stem, one in conformity with ISO standard size 30x38 and ISO 4400 (DIN 43650) electrical connection, and a compact one size 22x27, having the same performance but at lower price. The technical characteristics of the latter are described in the catalogue, series 300, and refer to MB solenoids. The base is fitted with screws (M4x30) for fastening to the distributor.

**Construction characteristics**

*Electrical parts:*

Solenoids: the solenoid consists of coils having different diameter copper wire windings insulated according standards "H"; they are encased in a nylon-glass compound. All parts are corrosion resistant.

*Mechanical parts:*

Stainless steel tube and plunger (AISI 430F), stainless steel adjusted springs, viton poppet seals, tropicalized zinc alloy interface plate, nitrile (NBR) seal nicked brass manual override, nickel steel coil lock nut, zinc steel mounting screws. To be usable, the solenoids have to be attached either to a base or directly to the distributor's operators by means of connectors G 1/8". Electrical connectors are standard. These solenoid are available in all voltages and frequencies used in the world. The following are the technical characteristics of the solenoid.

## Maintenance and replacement parts

Maintenance practices for these valves are similar to those already detailed for other products - replacement of the plunger or poppet is not advisable since the new replacement would not provide the best fit with the rest of the already used valve.

Special care should be taken that no dirt is accumulated between the working surface of fixed cores 3 and the plunger 2 which would result in vibrations and overheating of the solenoid. In the case of microsolenoid it must be assured that the alternate current coil is not charged when the mechanical part is not mounted to avoid destruction of the coil.

The electrical connections have to be perfect, especially where low currents are used (12-24 V). Oxidation of contacts between the connector and the coil can lead to intermittent malfunctions which are difficult to trace. Oxidation of contacts due to humidity or corrosive atmosphere are one of the most common causes of false alarms. Clean the contacts with appropriate spray.

## Series 700 - for compressed air and vacuum

The large flow valves and solenoid poppet valves for compressed air and vacuum.

Are manufactured for 3/2 and 2/2 versions only, either normally close and normally open.

For the compressed air operation, the application is similar to the equivalent spool valves while for the vacuum operation a particular attention should be paid to the valve selected and its connection to the pump.

For the electric pilot it is used a normal miniature solenoid M2 with pneumatic actuator and the special miniature solenoid M2/V with vacuum.

**The ordering code are referring to the solenoid valves with mechanics "M2" or "M2/V" assembled.**

**Coil are not included and have to be ordered separately (see Series 300).**

Coil c  US homologated are available (see 300 Series).

### Construction characteristics

|               | G 3/8"          |
|---------------|-----------------|
| Body          | Aluminium       |
| Actuators rod | Stainless steel |
| Bottom plates | Aluminium       |
| Piston seals  | NBR             |
| Springs       | Stainless steel |
| Poppets       | NBR             |
| Pistons       | Aluminium       |

### Use and maintenance

These valves have a mean life of 10 to 15 million cycles under normal operating conditions.

Lubrication is not required for good operation but we recommend good filtration to avoid dirty deposit causing malfunction.

Please ensure that the valve is being used according with the manufacturers specification, such as air pressure and temperature.

The exhaust port of the distributor has to be protected in a dusty and dirty environment.

For these products, according to the construction technique and special application, is not required any maintenance with parts replacement.

When necessary it is sufficient to clean the internal parts.

When it is used the solenoid valves with internal pilot, either for air or vacuum, inlet flow rate must be equal or higher that the required consumption flow rate.

Otherwise is better choose the external pilot version.

## Series PG - for compressed air and vacuum

The large flow valves and solenoid poppet valves for compressed air and vacuum.  
Are manufactured for 3/2 and 2/2 versions only, either normally close and normally open.

### Construction characteristics

|                              | G 1/2" - 1/2" NPT | G 3/4" - 3/4" NPT | G 1" - 1" NPT | G 1 1/2" - 1 1/2" NPT |
|------------------------------|-------------------|-------------------|---------------|-----------------------|
| Body, operator and end cover | Aluminium         |                   |               |                       |
| Actuators rod                | Steel             |                   |               |                       |
| Bottom plates                | Aluminium         |                   |               |                       |
| Seals and poppets            | NBR               |                   |               |                       |
| Springs                      | Stainless steel   |                   |               |                       |
| Pin guide                    | Stainless steel   |                   |               |                       |
| Pistons                      | Acetal resin      |                   |               |                       |

### Use and maintenance

These valves have a mean life of 10 to 15 million cycles under normal operating conditions.

Lubrication is not required for good operation but we recommend good filtration to avoid dirty deposit causing malfunction.

Please ensure that the valve is being used according with the manufacturers specification, such as air pressure and temperature.

The exhaust port of the distributor has to be protected in a dusty and dirty environment.

For these products, according to the construction technique and special application, is not required any maintenance with parts replacement.

When necessary it is sufficient to clean the internal parts.

When it is used the solenoid valves with internal pilot, either for air or vacuum, inlet flow rate must be equal or higher that the required consumption flow rate.

Otherwise is better choose the external pilot version.

**Series T772-773 - for compressed air and vacuum in technopolymer - G1/2" and G3/4"**

The range of G1/2" and G3/4" pilot and solenoid operated poppet valves are manufactured with high impact resistant thermoplastic. The use of this material results in a versatile, lightweight and economical valve. The traditional piston lip seal has been replaced with a rolling diaphragm, thereby eliminating frictional wear and tear to this seal. The valves (with the exception of certain vacuum models) also features a seal, which separates port 3 from the piston head. The inclusion of this seal has enhanced the valve's performance and allows the valve to be used as normally open (a configuration not possible in the Zama series). Solenoid operated valves (both internal and external pilot versions) are fitted with a quick exhaust unit, which reduces the return stroke operating time by 60%. The bulk of the valves in this series use the MP type operator, the exception being internally piloted vacuum models, which use the MV operator. These operators differ from the M2 type in that they have self-tapping mounting screws for use in plastics. **The ordering code are referring to the solenoid valves with mechanics "MP" or "MV" assembled.** Coils are not included and have to be ordered separately (series 300, Section 1, General Catalogue), with the exception of the bistable versions which already include 24V DC Coils (N331.0A). Coils with CE homologated are also available. (See series 300).

1 AIR DISTRIBUTION

**Construction characteristics**

|                              |                                     |
|------------------------------|-------------------------------------|
| Body, operator and end cover | High impact resistant thermoplastic |
| Seals and poppets            | NBR                                 |
| Diaphragm                    | Oil resistant rubber (NBR)          |
| Springs                      | AISI 302 stainless steel            |
| Piston and shaft             | Acetal resin                        |

**Use and maintenance**

These valves have a mean life of 10 to 15 million cycles under normal operating conditions. Lubrication is not required for good operation but we recommend good filtration to avoid dirty deposit causing malfunction. Please ensure that the valve is being used according with the manufacturers specification, such as air pressure and temperature. The exhaust port of the distributor has to be protected in a dusty and dirty environment. For these products, according to the construction technique and special application, is not required any maintenance with parts replacement. When necessary it is sufficient to clean the internal parts. When it is used the solenoid valves with internal pilot, either for air or vacuum, inlet flow rate must be equal or higher that the required consumption flow rate. Otherwise is better choose the external pilot version.

## Series T771 - for compressed air and vacuum in technopolymer - G1"

The range of G1" pilot and solenoid operated poppet valves represents an evolution of the current popular Zama series and of the Series T772-T773 (G1/2"-3/4").

Also for this series the main feature is the technopolymer material used to mould most of its components.

The use of this material results in a versatile, lightweight and economical valve.

This series also has other technical and functional enhancements over the existing range. Firstly, the traditional piston lip seal has been replaced with a rolling diaphragm, thereby eliminating frictional wear and tear to this seal.

This series (with the exception of certain vacuum models) also features a seal, which separates port 3 from the piston head. The inclusion of this seal has enhanced the valve's performance and allows the valve to be used as normally open (a configuration not possible in the Zama series).

Solenoid operated valves (both internal and external pilot versions) are fitted with a quick exhaust unit, which reduces the return stroke operating time by 80%.

The bulk of the valves in this series use the MP type operator, the exception being internally piloted vacuum models, which use the MV operator. These operators differ from the M2 type in that they have self-tapping mounting screws for use in plastics.

Bistable versions are also available, both for air or for vacuum. These valves are fitted with a 3/2 sol-sol valve (instead of the standard pilot valve) fitted with two 15mm 24V Dc microvalves (N331.0A).

**The ordering code are referring to the solenoid valves with mechanics "MP" or "MV" assembled.**

**Coils are not included and have to be ordered separately (series 300, Section 1, General Catalogue), with the exception of the bistable versions which already include 24V Dc Coils (N331.0A).**

**Coils CE marked are homologated are available (see 300 Series).**

### Construction characteristics

|                              |                                     |
|------------------------------|-------------------------------------|
| Body, operator and end cover | High impact resistant thermoplastic |
| Seals and poppets            | NBR                                 |
| Diaphragm                    | Oil resistant rubber (NBR)          |
| Springs                      | AISI 302 stainless steel            |
| Piston and shaft             | Acetal resin                        |

### Use and maintenance

These valves have a mean life of 10 to 15 million cycles under normal operating conditions.

Lubrication is not required for good operation but we recommend good filtration to avoid dirty deposit causing malfunction.

Please ensure that the valve is being used according with the manufacturers specification, such as air pressure and temperature.

The exhaust port of the distributor has to be protected in a dusty and dirty environment.

For these products, according to the construction technique and special application, is not required any maintenance with parts replacement.

When necessary it is sufficient to clean the internal parts.

When it is used the solenoid valves with internal pilot, either for air or vacuum, inlet flow rate must be equal or higher that the required consumption flow rate.

Otherwise is better choose the external pilot version.

## Series 514/N

The **514/N** Solenoid valves, are 2 stage valves actuated electro-pneumatically. A series 300 directly operated solenoid valve actuates pneumatically the principal power distributor.

Everything is well integrated in a practical configuration that also permits applications where there is limited space. Used primarily to operate rotary actuators and wherever there is a **NAMUR** standard installation plan.

The pilot air is normally taken from the inlet port (autofeed) and the only actuating signal is electric.

The range of the solenoid valves, as far as dimensions and mechanical construction, is similar to series 200. We have therefore solenoid valves G 1/4" with identical pneumatic characteristics that are, however, actuated electrically. They have a balanced spool, insensitive to presence or absence of pressure. They are constructed in 3 and 5 way with 1 solenoid (monostable) or 2 solenoids (bistable).

“NAMUR” interface dimensions:  
according to standard (VDI/VDE 3847 July 2003)

### Construction characteristics

|           |                     |
|-----------|---------------------|
| Body      | Aluminium           |
| Spacers   | Technopolymer       |
| Seals     | NBR                 |
| Springs   | Spring steel        |
| Operators | Aluminium           |
| Spools    | Nickel plated steel |
| Screws    | Zinc plated steel   |

### Use and maintenance

This valves have an average life of 15 million cycles depending on the application and air quality.

Filtered and lubricated air using specified lubricants will reduce the wear of the seals and ensures long and trouble free operation.

Please ensure that the valve is being used according with the manufacturers specification, such as air pressure and temperature.

The exhaust port of the distributor has to be protected in a dusty and dirty environment.

Repair kits including the spool complete with seals are available for overhauling the valves.

However, although this is a simple operation it should be carried out by a competent person.

**ATTENTION:** use hydraulic oil class H for lubrication such as CASTROL MAGNA SW32.

## Series T514

**TECNO-NAMUR** are 5/2 and 4/2 valves are solenoid valves pneumatically or electrically actuated. They are used in industrial automation applications or whenever a **NAMUR** mounting plane is available. Is available in 5/2, 4/2 and all-purposes versions. The final user can switch from one version to another by simply changing interface plate and adding/removing a plug.

**TECNO-NAMUR** valves are produced using the most up to date technical features, granting flexible design and elevated characteristics over standard products. Superior performance is further enhanced by the use of innovative materials of construction.

### Construction characteristics

|           |                     |
|-----------|---------------------|
| Body      | Technopolymer       |
| Spacers   | Technopolymer       |
| Seals     | Nitrile rubber      |
| Springs   | Stainless Steel     |
| Operators | Technopolymer       |
| Spools    | Nickel plated steel |
| Screws    | Zinc plated steel   |

**Note:**

"Although accurately described, the 4/2 valve actually functions as a 3/2 normally closed valve and should be used as such."

## Series 1000 - Size 1, 2 and 3

5 ways 2 or 3 positions distributors and electric distributors can be used mounted on individual or ganged bases. These standards are ISO 5599/1, according to which certain dimensions are mandatory, namely, the mounting surface, the pitch of the fastening screws, the characteristic of the electric pilot, the flow rate, the pneumatic connections, and so on.

The design is based on the balanced spool principle with pneumatic or electropneumatic actuators and resetting by mechanically or pneumatically operated spring.

The 3 position closed centres, are obtained by spring operation.

The feed to the actuators on the distributors can be provided either by pressure intake from inlet 1 (autofeed) or through the base from inlets 12 and 14 (external feed); there are two separate types of these distributors: one is the Series 1000 and the other is the Series 1010.

The Series 1000 includes size 1 and 2 and are built of die-cast aluminium. The selection is made by turning a seal fitted between body and operator by 180°, so to utilize external-feed pilot or with internal feed.

**Ordering codes are referring to distributors with "M2" mechanics or solenoid valves "S" mounted.**

**Coil are not included and have to be ordered separately (see Series 300).**

**"S" homologated c  US solenoid coil are available (see Series 300).**

1 AIR DISTRIBUTION

### Use and maintenance

This valves have an average life of 15 million cycles depending on the application and air quality.

Filtered and lubricated air using specified lubricants will reduce the wear of the seals and ensures long and trouble free operation.

Make sure that the conditions of use comply with the pressure, temperature etc. limits indicated and that the fastening screws are tightened with the following maximum torques on distributors Series 1010.

**Size 1 = 4 Nm**

**Size 2 = 5 Nm**

**Size 3 = 8 Nm**

Repair kits including the spool complete with seals are available for overhauling the valves.

However, although this is a simple operation it should be carried out by a competent person.

**ATTENTION:** use hydraulic oil class H for lubrication such as CASTROL MAGNA SW32.

### Construction characteristics

| Series 1000 | Size 1        | Size 2       |

## Series 1100 - Modular bases with side and bottom connections

These bases are manufactured with the outlet and pilot ports on both the sides and the bottom faces giving the option for use with any application. Unused ports must be blanked off using threaded plugs which are not included in the part number or price. To isolate bases from each other for use with different supply pressures ports 1, 3 & 5 should be plugged underneath the seal. The codes are:

## Series 1000 M12 - Size 1, 2 and 3

The ISO 5599/1 Solenoid valves Series 1000 M12 are available in three sizes with flow rates from 900 NI/min for size 1 up to the 3600 NI/min for size 3.

The standard features of the ISO valves are still included, however, they are now combined with a M12 electrical connector located in the middle of the valve to manage the electrical signals.

Versions are available to suit valves with both single and double 24VDC solenoids complete with IP65 protection.

All version are supplied with LED indicators

“Shifting time of pneumatic directional control valves or moving parts, logic devices were measured in accordance to ISO 12238:2001”

### Electrical characteristics

Electrical connector M12x1  
Protection degree IP65  
Input voltage 24VDC  
Nominal power 2,3W  
LED identification

### Monostable version

### Bistable version

## Series 600 - M5 - G1"

These accessories are a range of devices for completing a pneumatic circuit. These valves, with their special functions, are inserted between two valves, between a valve and a cylinder, or following a cylinder.

One of the particular characteristic of these accessories is that they are automatically actuated without the need for external commands. Usually, operation and idle are controlled by the presence or absence of pressure as, for example, in the case of quick exhaust valves which pilots itself as a selector, changing the flow direction as the signal goes off and on.

On the other hand, other components are inert. That is, they do not have any internal variable function which is sensitive to pressure. Among these components are silencers, manifolds and flow regulators.

There are also the flow regulators, which like electronic components, can be defined as variable resistances. They are fundamental in regulating the flow rate, provide precise timings and regulate the cylinders' speed.

The selector valves, with "AND" and "OR" functions, are logic functions components which often are an essential element. Furthermore, they are built to allow high flow rate which cannot be obtained by classic pneumatic logic.

The block valves lock the cylinder in a position, avoiding unexpected depressurization of the cylinder's chamber due to lack of compressed air at the inlet port. Practically, it is a piloted unidirectional valve that blocks the exhaust port when there is no air in the pilot circuit.

Finally the economizer valves are in fact a pressure reducer valves installed between valve and cylinder for reducing the air consumption. For example this is applicable on the cylinder return stroke without penalizing the exhaust as happens with FRL pressure regulator.

1  
AIR DISTRIBUTION

### Construction characteristics

We have not listed all different materials used for the construction of these components because the list would be too the long. We use corrosion proof material, brass or anodized aluminium and the most appropriate specific mixture for seals.  
If more information is required please contact our technical department.

### Use and maintenance

In operation pay attention to the minimum and maximum criteria for temperature and pressure, and ensure good quality compressed air. In a dirty environment, protect the exhaust ports.

In this case, maintenance is minimal and is necessary only if the air is particularly dirty.

The components most subject to damage by the accumulation of dirt are flow regulators with fine regulation and silencers. As for regulators, follow the normal procedure for disassembling, washing with non-chemical cleaning agents and remounting. The silencers need only to be rinsed in petrol or solvent and blown dry with compressed air.

The number of requests for spare seals for flow regulators and shuttle valves are statistically irrelevant. More often, it is necessary to replace the lining of the quick exhaust because of the wear it undergoes due to the particular conditions of operating.

**ATTENTION:** use hydraulic oil class H for lubrication such as CASTROL MAGNA SW32.

**Spry valves**

Coding: 6.13.00

**Construction characteristics**

- This valve, is based on the Venturi principle, and it is used to spray and nebulize a liquid.
- Useful in all applications where is needed a continuous lubrication and / or refrigeration.
- Incoming air (connection 1) sucks the liquid through the venturi principle (connection 3) to obtain a continuous spray output (connection 2).

| Technical characteristics |  |
|---------------------------|--|
| Fluid                     | filtered and lubricated air  |
| Liquid                    | Water and oil<br>(Liquid viscosity 3°E* ... 5°E*)<br>*E = Engler Degrees |
| Working pressure (bar)    | 3 ... 10   |
| Temperature °C            | -5 ... +70   |
| Weight (g)                | 85   |

**Liquid consumption diagram**

**Vacuum diagram**

Supply air : Connection 1  
Output (air and nebulized liquid) : Connection 2  
Supply liquid : Connection 3

## Series 900

The 900 series consist of the following components:

- Pressure switch, which transforms a pneumatic signal into an electric one.
- Impulse generator, which transforms a permanent pneumatic signal into an adjustable impulse from 0 to 10 seconds.
- Pneumatic timer (N.C. or N.O.), which cuts or releases a pneumatic signal within an adjustable time.
- Two hands safety valve, which allows a safety use of two hands pneumatic controls (for example two push-button 3/2 N.C. to a certain distance) excluding false signals in case of push-button or valve malfunction.
- Flip-Flop: 5/2 ways valve, single signal actuated, commutes the outlet from 2 to 4 and vice versa at each puls.
- For a correct functioning it's important that inlet pressure be the same or lower than pilot pressure.
- Oscillator valve, 5/2 - G 1/8" with two logic functions "NOT" mounted on board, switches when the pressure in the connected cylinder exhaust chamber is reaching the threshold of "NOT".
- Signal amplifier, 3/2 - G 1/8" N.C. valve actuated by weak signals but higher than 0.05 bar.
- Progressive start-up valve, which is a device that is fitted in between valve or solenoid valve and cylinder allows a gradual filling of the chamber providing a low power cylinder movement. The progressive start-up valve is made of a flow control valve and a 2/2 N.C. valve with 6 mm nominal orifice. The valve is totally open when the pressure in the cylinder reaches 50% of inlet pressure.
- High-low pressure devices, located in the pneumatic circuit between valve and cylinder, allow the function of the cylinder with two different pressures. Example: in case of a locking action, it is possible to approach the required position at a low pressure, then increase to its maximum value in the circuit with the use of an electric signal. They are practically made of a piloted pressure regulator without relieving.

### Construction characteristics

We use corrosion proof material, brass or anodized aluminium and the most appropriate specific mixture for seals.  
If more information is required please contact our technical department.

### Use and maintenance

In use pay attention to the minimum and maximum criteria for temperature and pressure, checking and ensure good quality compressed air. In a dirty environment, protect the exhaust ports. In this case, maintenance is minimal and is necessary only if the air is particularly dirty. This simple operation it should be carried out by a competent person.

**ATTENTION:** use hydraulic oil class H for lubrication such as CASTROL MAGNA SW32.

| Temperature °C            | -5 ... +70   |
| Weight (g)                | 285  |

### Series 50-T50

The blocking valves are used to maintain pressure in the downstream part of the pneumatic circuit even when the pressure supply is shut down. Blocking valves are normally assembled directly on cylinders ports in order to maintain the position even in cases of accidental loss of the pilot pressure by preventing a sudden loss of pressure in the cylinder chambers.

Unidirectional and bidirectional version are both available.

The unidirectional version allows free air to flow in one direction while requires a pneumatic signal to allow air flow in the opposite direction.

The bidirectional version requires a pressure signal to allow air flow in both of the two directions.

**The blocking valve cannot be used as safety device.**

1

AIR DISTRIBUTION

#### Constructive features

##### UNIDIRECTIONAL VERSION

- 1 - Aluminium piston
- 2 - Brass plug
- 3 - Brass body
- 4 - FPM poppet (1/8" and 1/4" version) PUR poppet
- 5 - NBR seal
- 6 - Steel spring

##### BIDIRECTIONAL VERSION

- 1 - Brass plug
- 2 - Brass body
- 3 - Aluminium piston
- 4 - Steel piston extension
- 5 - PUR poppet
- 6 - NBR seal
- 7 - Steel spring

1 AIR DISTRIBUTION

## Series 55 Tecno-FUN

This line of different logic functions that can be used in any place of the secondary pneumatic circuit, developed to be installed directly onto the main pneumatic components (distributors or cylinders). Thanks to the modular design it is possible to easily join together multiple logic functions without the need of using pipes to connect them; it is also possible to choose the type and style of each connection. The connections available are the following: straight cartridge; Banjo PL cartridge; male cartridge threaded 1/8" or 1/4" and female cartridge threaded 1/8". Function fittings can also be assembled side by side in order to be assembled on the DIN EN 50022 rail (using the relevant kit).

### Available functions

- Flow control valve
- Pressure regulator
- Block valve
- Quick exhaust valve
- OR gate
- AND gate
- Pressure gauge
- Progressive start-up valve
- Pressure regulator + pressure gauge
- Block valve + Flow control valve
- Block valve + quick exhaust valve

### Other characteristics:

Technopolymer body version  
Input/output connection directly integrated into the body  
In line or 90° connection  
Possibility to build a manifold -parallel mounting-  
Different connection options:  
Tube Ø4 Ø6 Ø8 (elbow version as well)  
G1/8" G1/4" male straight cartridge  
G1/8" female cartridge, in line or 90°

### Different mounting options:

- Wall fixing through the holes in the body
- By means of the fixing bracket
- Panel mounting (for those function that include such possibility)
- On DIN rail EN 50022 (using the DIN rail adapter kit)

1 AIR DISTRIBUTION

Example: 551.111.D6.D6.XX  
Flow control valve unidirectional, CONNECTIONS "A" and "B" Tube Ø6  
NOTE : For the dimension including cartridges see page "Accessories-Function fittings"

**Technical characteristics**

- The flow control valve is normally used to regulate the air flow and, as a consequence, for example, the speed of a cylinder. Two types of flow control valves are available: unidirectional and bidirectional.
- In the unidirectional valve the flow is regulated only in one direction while is free to move in the opposite direction; in the bidirectional valve the flow is regulated in both directions.
- Panel mounting using the lock nut supplied as standard
- on DIN rail using the relevant adaptor kit (see accessories)
- With 90° bracket (see accessories)
- directly on the support plate thanks to two through holes on the body

|          | F1 = G1/8" female                       |

Example: 551.131.D4.D4.XX

In line blocking valve, unidirectional. Connections "A" and "B" Tube Ø4

NOTE : For the dimension including cartridges see page "Accessories-Function fittings"

**Technical characteristics**

- The blocking valve function is to maintain the circuit downstream pressure in the event of loss of supply pressure. It is normally fitted directly onto the cylinder connections ports in order to ensure that, in case of accidental loss of the supply pressure, the units positions is maintained. This is achieved as the blocking valve preserves the pressure inside the pressurised chamber. Blocking valves can be unidirectional or bidirectional.
- In the unidirectional version the air flow is free in one direction while in order to allow the flow in the opposite direction is necessary to send a pneumatic signal to the unit connection 12.
- The bidirectional version requires a pneumatic signal on connection 12 to allow the flow in any of the two directions.
- on DIN rail using the relevant adaptor kit (see accessories)
- With 90° bracket (see accessories)
- directly on the support plate thanks to two through holes on the body

Quick exhaust valve. Connections "A" and "B" Tube Ø6  
NOTE : For the dimension including cartridges see page "Accessories-Function fittings"

Technical characteristics

- These are 3 ways, two positions valves which can be directly mounted onto the actuator or between the actuator and the control valve. Their function is to discharge the air directly into the atmosphere without going through the pneumatic circuit enabling the actuator to reach the maximum speed.
- on DIN rail using the relevant adaptor kit (see accessories)
- With 90° bracket (see accessories)
- directly on the support plate thanks to two through holes on the body

AIR DISTRIBUTION

Example: 551.181.D6.D4.XX = In line progressive start-up valve. Connections "A" Tube Ø6, "B" Tube Ø4  
NOTE: For the dimension including cartridges see page "Accessories-Function fittings"

**Technical characteristics**

- The soft start valve is a device designed to gradually pressurise the downstream circuit until 50% of the upstream pressure value is reached.
- Once the 50% of the upstream pressure value is reached in the down stream circuit the valve fully opens allowing full air passage.
- The filling time can be adjusted thanks to the built in flow regulator.
- This device is used in order to ensure that during the pneumatic circuit start up the cylinders will return to their home position slowly avoiding collisions or sudden movements.

Example: 551.281.M1.D4.XX = 90° progressive start-up valve. connections "A" Male G1/8", "B" Tube Ø4  
NOTE: For the dimension including cartridges see page "Accessories-Function fittings"

**Technical characteristics**

- The soft start valve is a device designed to gradually pressurise the downstream circuit until 50% of the upstream pressure value is reached.
- Once the 50% of the upstream pressure value is reached in the down stream circuit the valve fully opens allowing full air passage.
- The filling time can be adjusted thanks to the built in flow regulator.
- This device is used in order to ensure that during the pneumatic circuit start up the cylinders will return to their home position slowly avoiding collisions or sudden movements.

NOTE : For the dimension including cartridges see page "Accessories-Function fittings"

**Technical characteristics**

- The combination of this two functions ensures that the downstream pressure is maintained in case of accidental loss of supply pressure and at the same time grants the possibility to regulate the circuit flow rate. A typical application of this combination is close to or directly assembled onto the actuator connection ports. This allows to keep pressurised the cylinder chamber in case of accidental loss of supply pressure and to regulate the exhaust flow rate when the blocking valve is actuated.
- The possible combinations are the following:
  - Unidirectional blocking valve + unidirectional flow control valve
  - Bidirectional blocking valve + bidirectional flow control valve
  - Bidirectional blocking valve + unidirectional flow control valve
  - Unidirectional blocking valve + bidirectional flow control valve

**Coupling kit (pins and forks)**

Coding: 55160

- Weight 2,5 g
- The kit, which includes a series of pins and forks, enables to join together in a fast and safe way the function fittings. The pins, once inserted in the front holes, ensure resistance against forces applied perpendicularly and sideways (for example the insertion of the tube in the cartridges).
- The forks, once located in the profiled housing ensures that the parts are held together tightly.
- The kit allows for 5 function fittings to be mounted together.

**Series 1750-1760**

This type of miniaturised pressure regulators are mostly indicated for the use on the secondary level of the pneumatic circuits. Thanks to the contained dimensions are particularly indicated to be used very closely or directly mounted onto the consumption. Three versions are available.

1  
AIR DISTRIBUTION

Version rod G1/8" swivel ring with female thread G 1/8" and G 1/4" or push-in fitting for tube Ø4, Ø6 and Ø8

Model with body in technopolymer integrated gauge and quick coupling fittings for tube Ø4 and Ø6

G/1/8" model to be directly mounted onto the valve

Compact design to be directly mounted onto the valves uses standard swivel rings with G1/8" female thread (ref 41218) or quick coupling fittings for tube sizes. It is also possible to supply the regulating shaft without the swivel ring.

Model with body in technopolymer and integrated gauge

is the more complete solution, comprises a movable gauge which enables to check the regulated pressure.

Is manufactured using the same regulating unit as the base model fitted into a technopolymer body on which are inserted two quick coupling cartridges, 4mm or 6mm tube for inlet and outlet connections; two side plates lock the cartridges and gauge in position.

It is possible to join together more than one regulator by means of a dedicated adaptor made of technopolymer which must be inserted in the appropriate slot. (the air must be supplied independently to each regulator.)

Several mounting solutions are available: wall mounting via two mounting holes, on DIN rail using the specific accessories or on panels.

**Mounting solutions**

**G/1/8" model to be directly mounted into the valve: directly mounted into the valves threaded connections (consumptions)**

**Model with body in technopolymer and integrated gauge: panel mounting via the locking nut**

**Model with body in technopolymer and integrated gauge: wall mounting via the mounting holes on the body**

**Model with body in technopolymer and integrated gauge: on DIN rail using the specific accessories**

**Model with body in technopolymer and integrated gauge: panel mounting via the locking nut**

**Miniaturised pressure regulators-with technopolymer body**

**Construction characteristics**

- Regulating cartridge = Nickel-plated brass
- Regulator body = Technopolymer
- Seals = Oil resistant nitrilic rubber (NBR)
- Plunger spring = AISI 302
- Regulating spring = Spring suitable steel
- Plunger = Oil resistant nitrilic rubber (NBR)
- Other parts = Brass

## Series Mini-RAP

### Technical data

Working temperature: -20°C +70°C  
Maximum working pressure: 10 bar  
Fluid: Compressed air (others fluids on requests)  
Nichel-plated brass body, Brass grip, Silicone free NBR gaskets  
Thread: Cylindrical with O-Ring  
Maximum fixing torque for fittings  
Thread: M3: 0,4 Nm  
Thread: M6 and M6x0,75: 1,3 Nm

### Main characteristics

1. Can be inserted and extracted with one hand
2. Suitable for tube Rilsan, Polyurethane, Nylon, Polyethylene
3. Supercompact
4. Extremely lightweight yet sturdy
5. O-Ring provided with his own seat to ensure seal with polished surface
6. Suitable for vacuum applicatio

**SERIES PX MODULAR ELECTRONIC SYSTEM**

- Maximum flexibility
- Digital and analogue I/O modules
- Stand alone solution connectable via SUB-D cable to all manifolds
- Manufactured in technopolymer
- Wide range of communication protocols

**FLEXIBILITY IN A COMPACT SPACE**

Series PX modular electronic system has been designed to offer control and acquisition hardware for pneumatic and electric devices; it supports the most diffused communication protocols and can be configured with I/O modules, both digital and analog.

Series PX in stand alone version can be connected to every solenoid valves battery by using SUB-D connector, on the other hand Series PX can be directly connected to the following Pneumax solenoid valves series:

- Optyma S
- Optyma F
- Optyma T
- 2700
- 3000

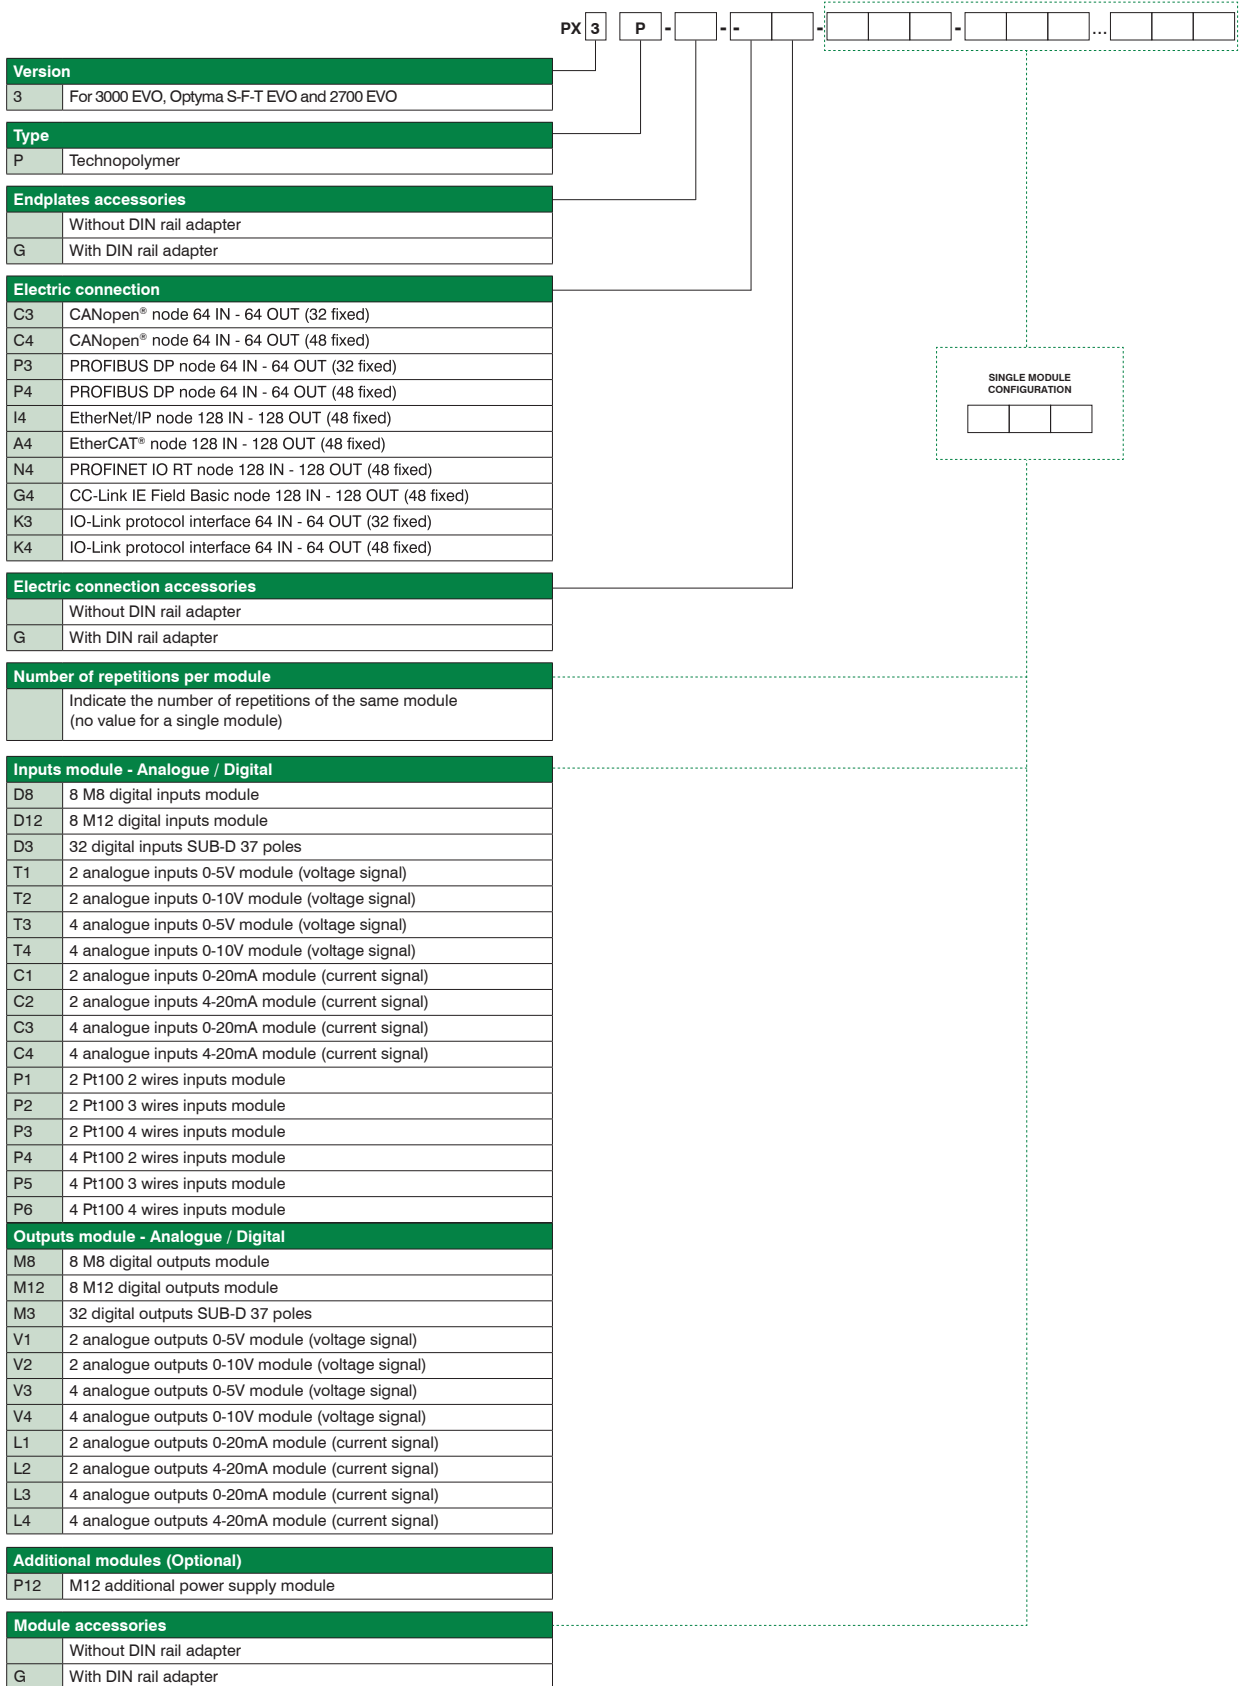

Technopolymer bodies and sub-base and compact design has been studied to optimise room taken by the whole system, they make Series PX extremely light and guarantee maximum flexibility.

The ability to quickly and easily configure the system, the range of modules and accessories available meet at the best the specific application needs of many industrial sectors.

Configurable on Cadenas platform

Configuration examples

**Example shown: PX3-P-N4-D8-V4-M3-D12**

Multiprotocol module with PROFINET IO RT protocol node, M8 digital input module, M8 analogue output module, 37 pin (SUB-D) digital output module and M12 digital input module.

**Example shown: PX3-P-G-A4-3D8-2M12**

Multiprotocol module with EtherCAT® protocol node, 3 M8 digital input modules and 2 M12 digital output modules; also includes DIN rail adaptors.

Overall dimensions

▶ Left endplate kit

Coding: 3100.KT.00

Weight 52 g

▶ Right endplate kit

Coding: 3100.KT.03

Weight 51 g

▶ DIN rail adapter

Coding: 3100.16

Weight 12 g

▶ Cable complete with connector, male 37 poles, IP65

Coding: 2400.37.M.L.C

|   |                  |
|---|------------------|
|   | CABLE LENGTH     |
| L | 03 = 3 meters    |
|   | 05 = 5 meters    |
|   | 10 = 10 meters   |
|   | CONNECTOR        |
| C | 10 = Stand alone |
|   | 90 = 90° Angle   |

1. Assemble the required modules starting with 3100.KT.03 right endplate kit.

2. Complete the assembly with the 3100.KT.00 left endplate kit.

3. To lock: rotate anticlockwise (in the direction of the LOCK print on the case).  
To unlock: rotate clockwise (in the direction of the UNLOCK print on the case).  
The same procedure shall be used to add or remove any module.

4. If required, assemble the DIN rail adapter using a 3 mm allen key.

A. For integration with a manifold it is necessary to remove the 3100.KT.03 right endplate kit.

B. Series PX modular electronic system can be integrated with the following valve manifold series:

- Optyma S
- Optyma F
- Optyma T
- 2700

The Series 3000 manifolds already integrates with the PX Series modules with dedicated fixing options.  
Please refer to [www.pneumaxspa.com](http://www.pneumaxspa.com) for more details.

## CANopen® protocol node kit

CANopen® node manages 64 inputs and outputs.

Accessory modules can be connected in whatever order and configuration.

Connection to CANopen® fieldbus is made via two M12, male and female, 5 pins, type A circular connectors, in parallel between them; connectors pinout is compliant to CiA Draft recommendation 303-1 (V. 1.3 : 30 December 2004).

Transmission speed and address, as well as termination resistor activation are set via DIP-switches.

CANopen® node is available in two versions with 32 or 48 outputs allocated to solenoid valves on the manifold directly connected to the node.

Such outputs correspond to least significant bytes and their allocation is independent of how many solenoid valves are installed.

Remaining outputs can be used to control the modules.

Byte allocation to additional modules is fully automatic.

### Current limitations

Both stand alone and integrated components must operate within the current limits of the fieldbus node; please note: the solenoid valves are supplied by OUTPUTS + 24 V DC (pin 4).

To compute the maximum current on the OUTPUTS + 24 V DC, please use the following formula:

$$I_{24V\ DC\ out} = \sum_{i=1}^n I_{out,i} + m \cdot i_{EV}$$

$n$  = number of installed modules  
 $I_{out,i}$  = maximum total current absorbed by the i-th module on the OUTPUTS + 24 V DC supply rail (please see specifications of the single module)  
 $m$  = number of installed solenoid pilots  
 $i_{EV}$  = mean absorbed current per solenoid pilot (please see table below)

| Series          | $i_{EV}$                                     |
|-----------------|--|
| 2200 *Optyma S* | 36 mA  |
| 2500 *Optyma F* | 54 mA  |
| 2500 *Optyma T* | 54 mA  |
| Series 2700     | 24 mA (1 W version) / 100 mA (2,3 W version) |

For each fieldbus node, maximum deliverable current by OUTPUTS + 24 V DC supply is 4 A, moreover the sum of the currents on OUTPUTS + 24 V DC and INPUTS + 24 V DC must not exceed 4 A.

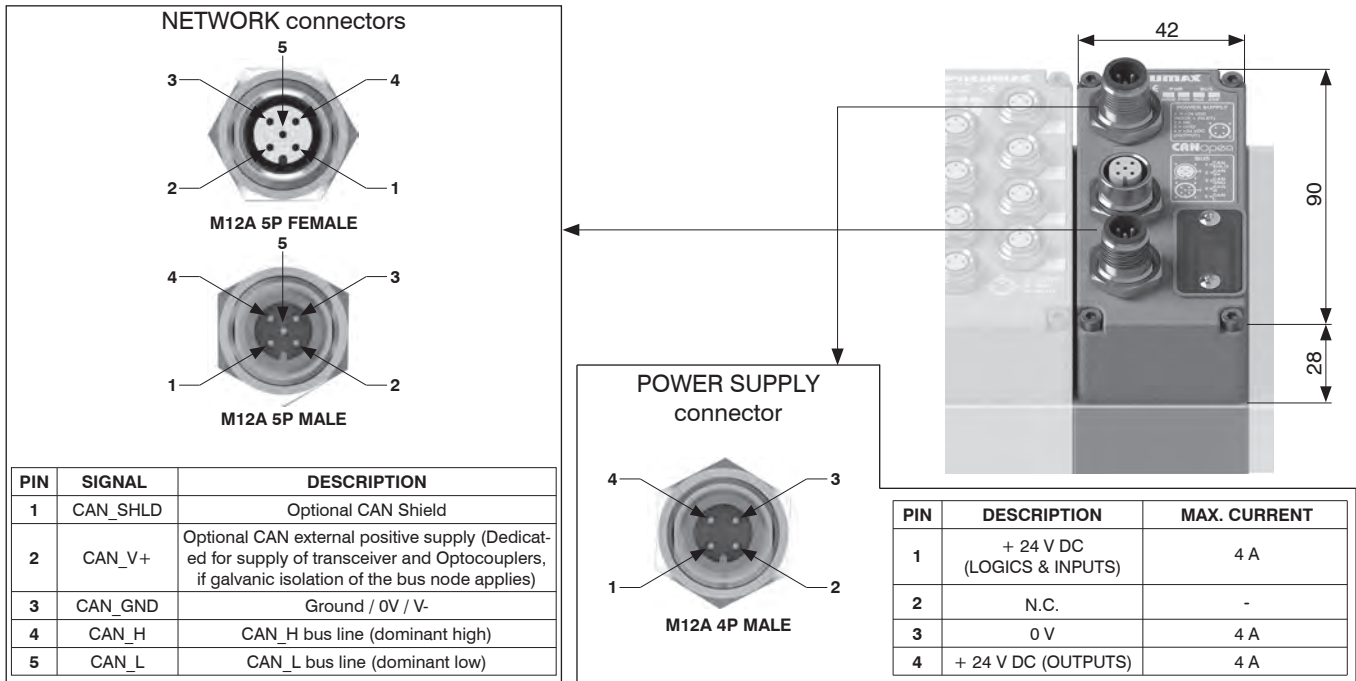

$$I_{24V\ DC\ out} + I_{24V\ DC\ in} < 4A$$

Where:

$$I_{24V\ DC\ in} = \sum_{i=1}^n I_{in,i}$$

$n$  = number of installed modules  
 $I_{in,i}$  = maximum total current absorbed by the i-th module on the INPUTS + 24 V DC supply rail (please see specifications of the single module)

 $I_{out,i}$  = maximum total current absorbed by the i-th module on the OUTPUTS + 24 V DC supply rail (please see specifications of the single module)  
 $m$  = number of installed solenoid pilots  
 $i_{EV}$  = mean absorbed current per solenoid pilot (please see table below)

| Series         | $i_{EV}$                                     |
|----------------|--|
| 2200°Optyma S° | 36 mA  |
| 2500°Optyma F° | 54 mA  |
| 2500°Optyma T° | 54 mA  |
| Series 2700    | 24 mA (1 W version) / 100 mA (2,3 W version) |

For each fieldbus node, maximum deliverable current by OUTPUTS + 24 V DC supply is 4 A, moreover the sum of the currents on OUTPUTS + 24 V DC and INPUTS + 24 V DC must not exceed 4 A.

$$I_{24V\ DC\ out} + I_{24V\ DC\ in} < 4A$$

Where:

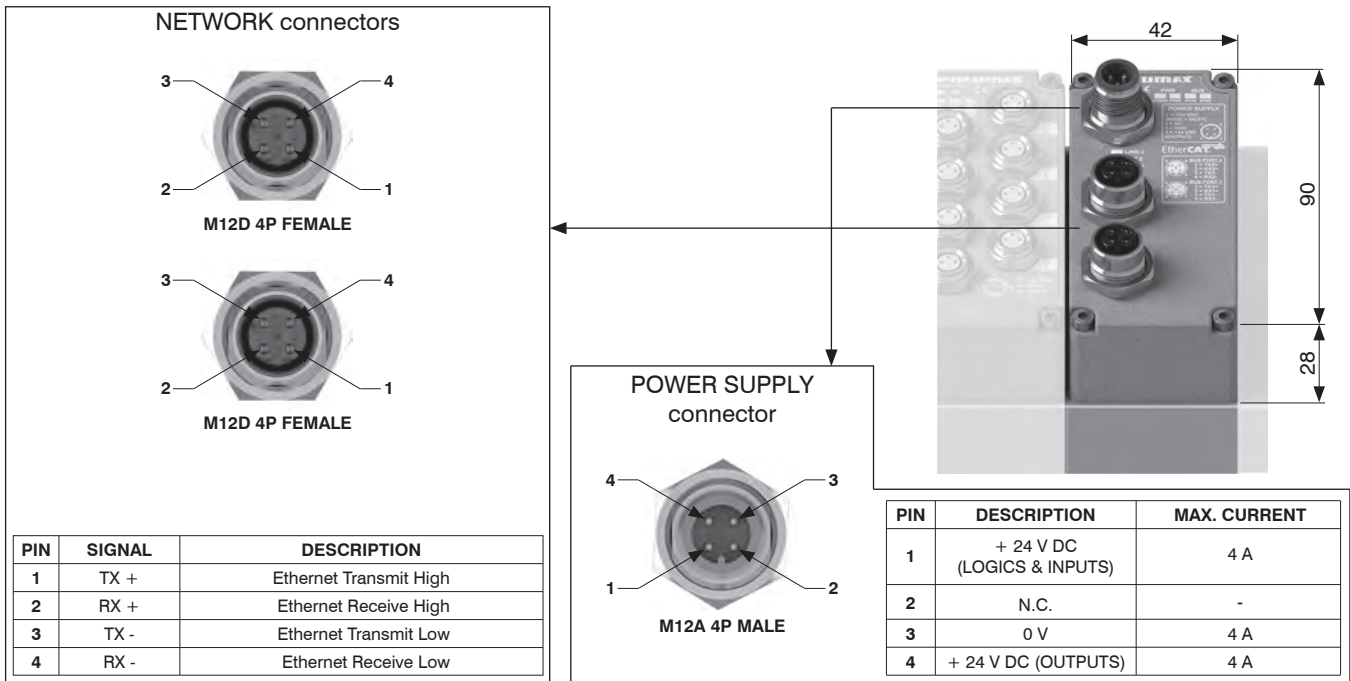

$$I_{24V\ DC\ in} = \sum_{i=1}^n I_{in,i}$$

$n$  = number of installed modules  
 $I_{in,i}$  = maximum total current absorbed by the i-th module on the INPUTS + 24 V DC supply rail (please see specifications of the single module)

In case total current is more than 4 A, it is mandatory to supply modules exceeding current limit with power supply module K5030.M12.

## IO-Link protocol interface kit

IO-Link interface manages 64 inputs and outputs.

Accessory modules can be connected in whatever order and configuration.

Electric power supply and IO-Link connection to the Master are made via M12, male, 5 pins, type A, circular connector, "CLASS B", according to IO-Link specifications.

Electric rails L+ / L- supply interface only, while P24 / N24 rails supply additional modules and solenoid valves.

Either power supplies are galvanically isolated in the IO-Link interfaces.

IO-Link interface is available in two versions with 32 or 48 outputs allocated to solenoid valves on the manifold directly connected to the node.

Such outputs correspond to least significant bytes and their allocation is independent of how many solenoid valves are installed.

Remaining outputs can be used to control the modules.

Byte allocation to additional modules is fully automatic.

### Current limitations

Both stand alone and integrated components must operate within the current limits of the fieldbus node; please note: the solenoid valves are supplied by pin 2 and pin 5 (P24 / N24).

To compute the maximum current on the P24 / N24 supply, please use the following formula::

$$I_{24V\ DC\ out} = \sum_{i=1}^n I_{out,i} + m \cdot i_{EV}$$

$n$  = number of installed modules  
 $I_{out,i}$  = maximum total current absorbed by the i-th module on the OUTPUTS + 24 V DC supply rail (please see specifications of the single module)  
 $I_{in,i}$  = maximum total current absorbed by the i-th module on the INPUTS + 24 V DC supply rail (please see specifications of the single module)  
 $m$  = number of installed solenoid pilots  
 $i_{EV}$  = mean absorbed current per solenoid pilot (please see table below)

| Series          | $i_{EV}$                                     |
|-----------------|--|
| 2200 *Optyma S* | 36 mA  |
| 2500 *Optyma F* | 54 mA  |
| 2500 *Optyma T* | 54 mA  |
| Series 2700     | 24 mA (1 W version) / 100 mA (2,3 W version) |

= maximum total current absorbed by the i-th module on the INPUTS + 24 V DC supply rail (please see specifications of the single module)

In case total current is more than 4 A, it is mandatory to supply modules exceeding current limit with power supply module K5030.M12.

### 8 digital inputs module kit M8

M8 digital inputs module provides 8 M8, 3 pins, female connectors.

Inputs have PNP logic, + 24 V DC  $\pm$  10%.

It is possible to connect 2 wires devices (e.g. switches, magnetic limit switches, pressure switches, etc.) as well as 3 wires devices (e.g. proximity sensors, photocells, electronic magnetic limit switches, etc.).

Inputs module power supply is provided by + 24 V DC power input on the serial system (type A, 4 pin M12 power connector, pin 1) or by K5030.M12 additional power supply module, in case it were installed upstream of the inputs module.

Coding: K5230.08.M8

**► Additional power supply module kit**

Additional power supply module supplies additional electric power for downstream optional modules, where "downstream" means farther from serial node, **resetting the current limits of the network node / IO-Link interface.**

Electric connection of the module to external power supply unit occurs via an M12 4 pins type A male connector.

M12 connector has two different pins to power up logics and inputs (Pin 1) and outputs (Pin 4).

Presence of each power supply rail is indicated by corresponding green LED.

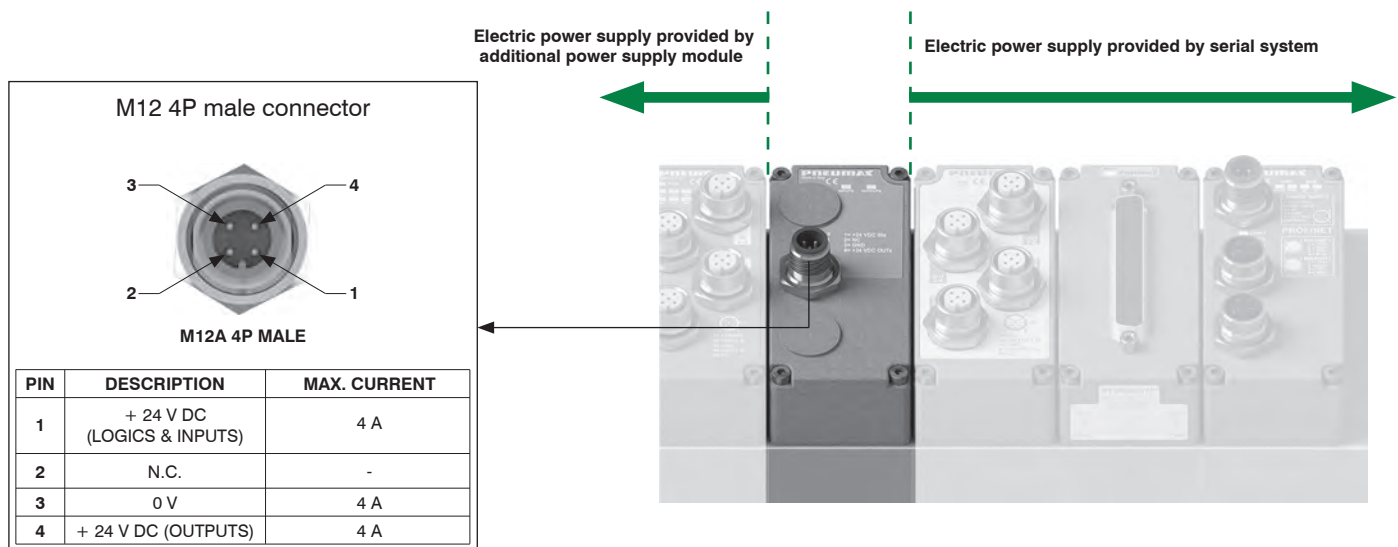

When using IO-Link interface, the additional power supply module is useful for separating the module power supplies of input from the output modules placed downstream.

## Series 3000 EVO

- Version 3100 (10 mm) and 3400 (15,5 mm)
- Nominal flow rate up to 200 NI/min (Version 3100)
- Nominal flow rate up to 600 NI/min (Version 3400)
- Stand alone or manifold mounted versions
- Valve replacement without disconnecting the tubes

Pneumax valves and solenoid valves are designed to guarantee versatility and maximum reliability in the control of integrated pneumatic circuits.

The Pneumax 3000 EVO series of solenoid valves is a very flexible solution that can be easily configured to optimize the efficiency of the whole system through a constant interface and communication with the machine.

The Pneumax 3000 EVO series is available in stand alone and manifold mounted versions.

- Available with a wide range of serial system protocols
- Wide range of accessories
- Available sub-base mounted or with M5 threaded ports (Version 3100) and G1/8" (Version 3400)
- Possibility to use different pressures along the manifold (including vacuum)
- Certified 

Both versions include a wide range of functions, capable of working with positive pressures up to 10 bar or vacuum.

The valves have aluminum bodies with integrated electrical connections, manual override and a LED that indicates when the valve is actuated. 3000 EVO series is another addition to the extensive range of solenoid valve systems designed for applications in very demanding industrial sectors such as assembly and robotics, packaging or automotive.

**Series 3000 EVO - STAND ALONE**

1  
AIR DISTRIBUTION

The range of series 3000 EVO solenoid valves version 3100 (10mm) and 3400 (15,5mm), are available in STAND ALONE self feeding or external feeding versions and realised with M8 point to point and 90° H connection with an integrated snap-on fitting.

**Main characteristics**

- 10 and 15,5 mm size.
- Multi-position sub-bases in different lengths.

**Functions**

- S.V. 5/2 Monostable Solenoid-Spring
- S.V. 5/2 Monostable Solenoid-Differential (only self feeding)
- S.V. 5/2 Bistable Solenoid-Solenoid
- S.V. 5/3 C.C. Solenoid-Solenoid
- S.V. 2x3/2 N.C.-N.C. (= 5/3 O.C.) Solenoid-Solenoid
- S.V. 2x3/2 N.O.-N.O. (= 5/3 P.C.) Solenoid-Solenoid
- S.V. 2x3/2 N.C.-N.O. Solenoid-Solenoid
- S.V. 2x3/2 N.O.-N.C. Solenoid-Solenoid

## Series 3000 EVO - MANIFOLD

The range of solenoid valves to be assembled in pre-configured manifold, is available in multi-pin and serial versions, with a vast choice of connectors and analogue and digital input and output accessories.

The compact and clean design of both the valve body and the manifold, each one produced in aluminum, allows their use in applications requiring space optimization and weight reduction without sacrificing reliability and the prerogatives of aluminum.

The multi-pin connection version is available in three different types of connections:

- SUB-D 25 poles equipped with 24 outputs and configurable in different lengths up to 12 bistable valve positions on the manifold
- SUB-D 37 poles equipped with 32 outputs and configurable in different lengths up to 16 bistable valve positions on the manifold
- SUB-D 44 poles HD equipped with 40 outputs and configurable in different lengths up to 20 bistable valve positions on the manifold

Every one of these options covers the wide range of application requirements and provides electronic management by default capable of energy saving on individual coils and managing PNP and NPN connections automatically without any difference in installation for the end user.

Precisely in order to guarantee maximum integration versatility in different machines and applications, the 3000 EVO series valves in the serial version are designed to interface with all main communication protocols: CANopen®, PROFIBUS DP, EtherNet/IP, EtherCAT®, PROFINET IO RT, CC-Link IE Field Basic and IO-Link.

Each implemented protocol has been provided to guarantee the best expandability and inputs/outputs management.

In particular it has been provided protocols to manage up to 64 inputs and 64 outputs (PROFIBUS DP, CANopen® and IO-Link) and other protocols to manage up to 128 inputs and 128 outputs (EtherCAT®, EtherNet/IP, CC-Link IE Field Basic and PROFINET IO RT).

Taking advantage of the output signals it is possible to connect components to manage, for example, proportional pressure regulator or to control other solenoid valves.

The 3000 EVO series allows the use of modules dedicated to managing input signals up to the maximum number of inputs manageable by the specific serial node used.

Input modules with different interfaces and different technologies have been provided: modules with eight digital inputs with M8 or M12 connection, analogue or voltage input modules with M8 connection interface and others.

One of the strengths of this system is the possibility to freely configure the series of input and output modules, giving the advantage of installation flexibility.

### Main characteristics

10 and 15,5 mm size.

Multi-position sub-bases in different lengths.

Integrated and optimized electrical connection system.

### Functions

S.V. 5/2 Monostable Solenoid-Spring

S.V. 5/2 Monostable Solenoid-Differential

S.V. 5/2 Bistable Solenoid-Solenoid

S.V. 5/3 C.C. Solenoid-Solenoid

S.V. 2x3/2 N.C.-N.C. (= 5/3 O.C.) Solenoid-Solenoid

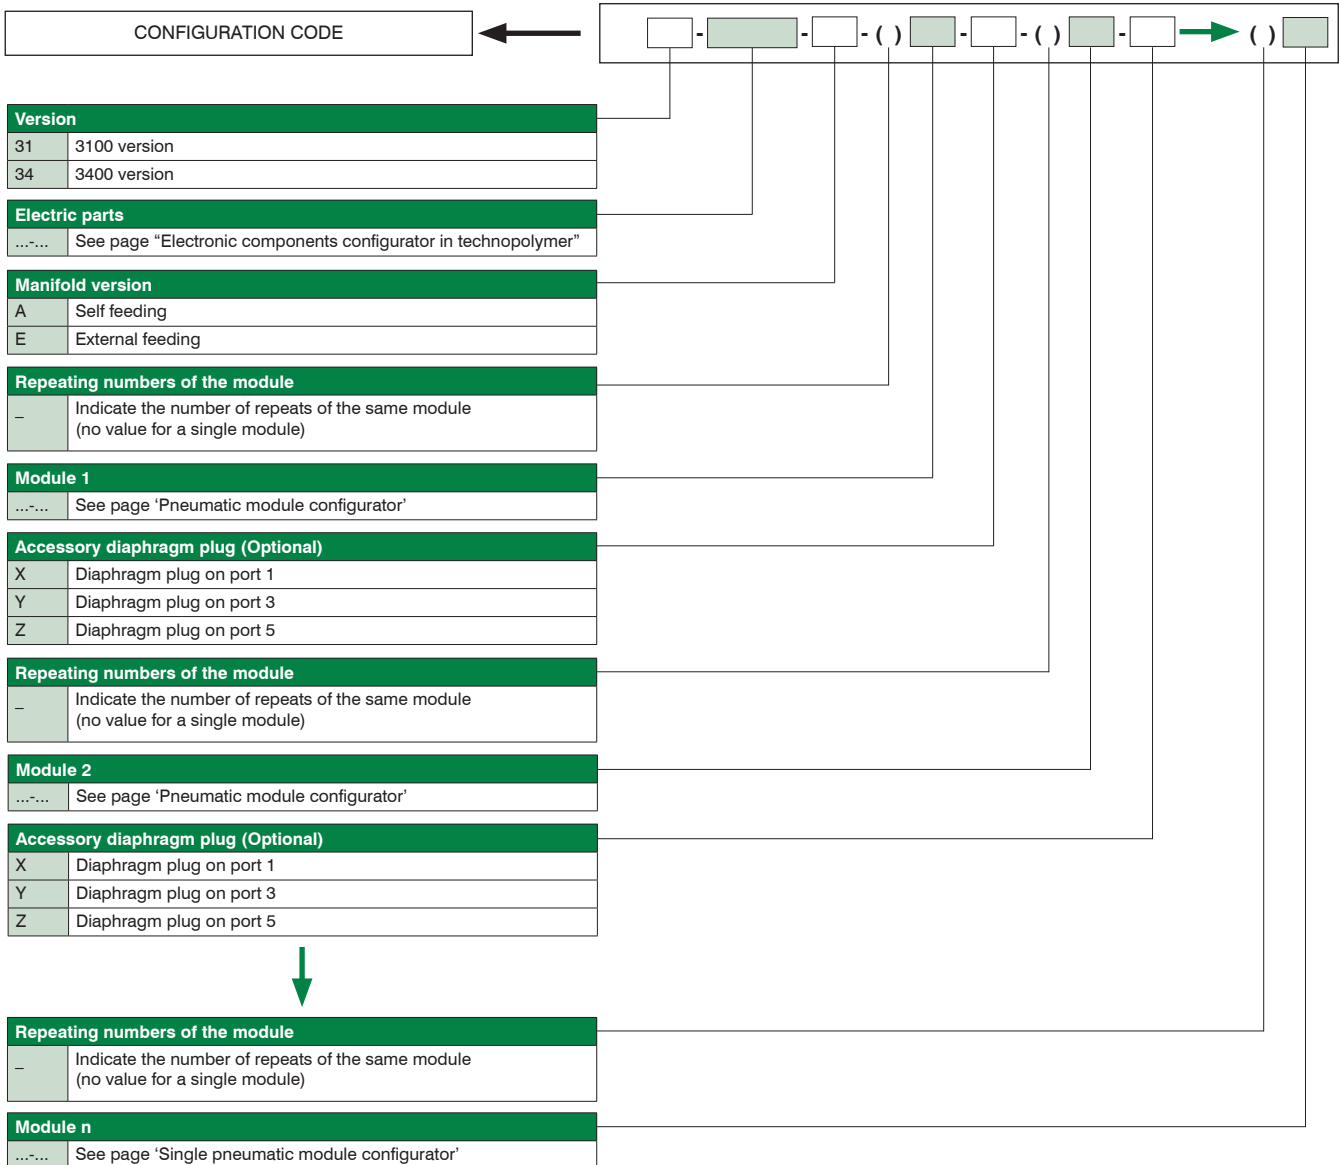

S.V. 2x3/2 N.O.-N.O. (= 5/3 P.C.) Solenoid-Solenoid

S.V. 2x3/2 N.C.-N.O. Solenoid-Solenoid

S.V. 2x3/2 N.O.-N.C. Solenoid-Solenoid

Rules and configuration scheme

Check the number of available solenoid valve positions

| Number of available solenoid valve positions (standard) |   |   |    |    |    |    |    |
|---|---|---|----|----|----|----|----|
| 4   | 6 | 8 | 10 | 12 | 16 | 20 | 24 |

**Note:**

When composing the configuration, always bear in mind that the maximum number of electrical signals available is:

- 48 if a serial node or IO-Link interface is used.
- 40 if a 44-pole multi-pin is used.
- 32 if a 37-pole multi-pin module is used.
- 24 if a 25-pole multi-pin module is used.

Each position on the manifold occupies two electrical signals; if a monostable valve is used, an electrical signal is lost.

However, this makes it possible to replace the monostable valve with a bistable valve in the same position.

Diaphragm plugs are used to interrupt ports 1, 3 and 5 of the sub-base.

If it is necessary to interrupt more than one port at the same time, put the letters that identify their position in sequence (e.g.: if it is necessary to intercept the ports 3 and 5 you must put the letters YZ).

If one or more ports must be interrupted more than once, the addition of the intermediate supply/discharge module is necessary.

**Solenoid valve description**

**From the top**

1  
AIR DISTRIBUTION

**DIN rail fixing**

**Supply ports and maximum possible size according to valves used**

Manual override actuation

**Instable function:**  
Push to actuate  
(when released it moves back to the original position)

**Bistable function:**  
Push and turn to get the bistable function

**Note:** we recommend the manual override is returned to it's original position when not in use

Solenoid valves installation

Maximum fixing torque for fittings: 0,2 Nm

Serial systems and multi-pin modules installation

1. Fix the dedicated adapter (code 3100.KA.0) to the manifold.

1  
AIR DISTRIBUTION

2. Assemble the required modules.

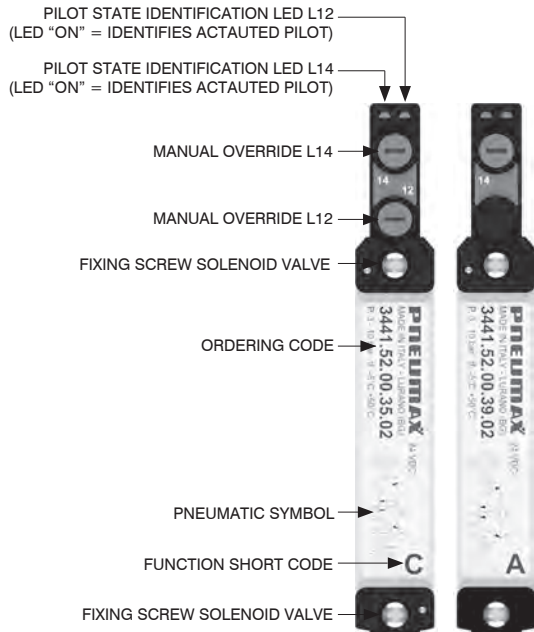

3. Complete the assembly with the 3100.KT.00 left endplate kit.

4. To lock: rotate anticlockwise (in the direction of the LOCK print on the case).  
To unlock: rotate clockwise (in the direction of the UNLOCK print on the case).  
The same procedure shall be used to add or remove any module.

1  
AIR DISTRIBUTION

1. Fix the dedicated adapter (code 3400.KA.0) to the manifold.

2. Assemble the required modules.

3. Complete the assembly with the 3100.KT.00 left endplate kit.

4. To lock: rotate anticlockwise (in the direction of the LOCK print on the case).  
To unlock: rotate clockwise (in the direction of the UNLOCK print on the case).  
The same procedure shall be used to add or remove any module.

5. Fix the offset compensation plate 3400.P0 to the last single module.

### CANopen® protocol node

CANopen® node manages 64 inputs and outputs.  
Accessory modules can be connected in whatever order and configuration.  
Connection to CANopen® fieldbus is made via two M12, male and female, 5 pins, type A circular connectors, in parallel between them; connectors pinout is compliant to CiA Draft recommendation 303-1 (V. 1.3 : 30 December 2004).  
Transmission speed and address, as well as termination resistor activation are set via DIP-switches.  
CANopen® node is available in two versions with 32 or 48 outputs allocated to solenoid valves on the manifold directly connected to the node.  
Such outputs correspond to least significant bytes and their allocation is independent of how many solenoid valves are installed.  
Remaining outputs can be used to control the modules.  
Byte allocation to additional modules is fully automatic.

Coding: 5530.64.VCO

| VERSION   |
|---|
| 32 = 32 output bits available for valve connections |
| 48 = 48 output bits available for valve connections |

### Current limitations

Both stand alone and integrated components must operate within the current limits of the fieldbus node; please note: the solenoid valves are supplied by OUTPUTS + 24 V DC (pin 4).

To compute the maximum current on the OUTPUTS + 24 V DC, please use the following formula:

$$I_{24V\ DC\ out} = \sum_{i=1}^n I_{out,i} + m \cdot i_{EV}$$

$n$  = number of installed modules  
 $I_{out,i}$  = maximum total current absorbed by the i-th module on the OUTPUTS + 24 V DC supply rail (please see specifications of the single module)  
 $m$  = number of installed solenoid pilots  
 $i_{EV}$  = mean absorbed current per solenoid pilot (please see table below)

| Series | i_EV  |
|--------|-------|
| 3000   | 36 mA |

For each fieldbus node, maximum deliverable current by OUTPUTS + 24 V DC supply is 4 A, moreover the sum of the currents on OUTPUTS + 24 V DC and INPUTS + 24 V DC must not exceed 4 A.

$$I_{24V\ DC\ out} + I_{24V\ DC\ in} < 4A$$

Where:

$$I_{24V\ DC\ in} = \sum_{i=1}^n I_{in,i}$$

$n$  = number of installed modules  
 $I_{in,i}$  = maximum total current absorbed by the i-th module on the INPUTS + 24 V DC supply rail (please see specifications of the single module)

In case total current is more than 4 A, it is mandatory to supply modules exceeding current limit with power supply module K5030.M12.

$$I_{24V\ DC\ out} = \sum_{i=1}^n I_{out,i} + m \cdot i_{EV}$$

$n$  = number of installed modules  
 $I_{out,i}$  = maximum total current absorbed by the i-th module on the OUTPUTS + 24 V DC supply rail (please see specifications of the single module)  
 $m$  = number of installed solenoid pilots  
 $i_{EV}$  = mean absorbed current per solenoid pilot (please see table below)

| Series | i_EV  |
|--------|-------|
| 3000   | 36 mA |

For each fieldbus node, maximum deliverable current by OUTPUTS + 24 V DC supply is 4 A, moreover the sum of the currents on OUTPUTS + 24 V DC and INPUTS + 24 V DC must not exceed 4 A.

$$I_{24V\ DC\ out} + I_{24V\ DC\ in} < 4A$$

Where:

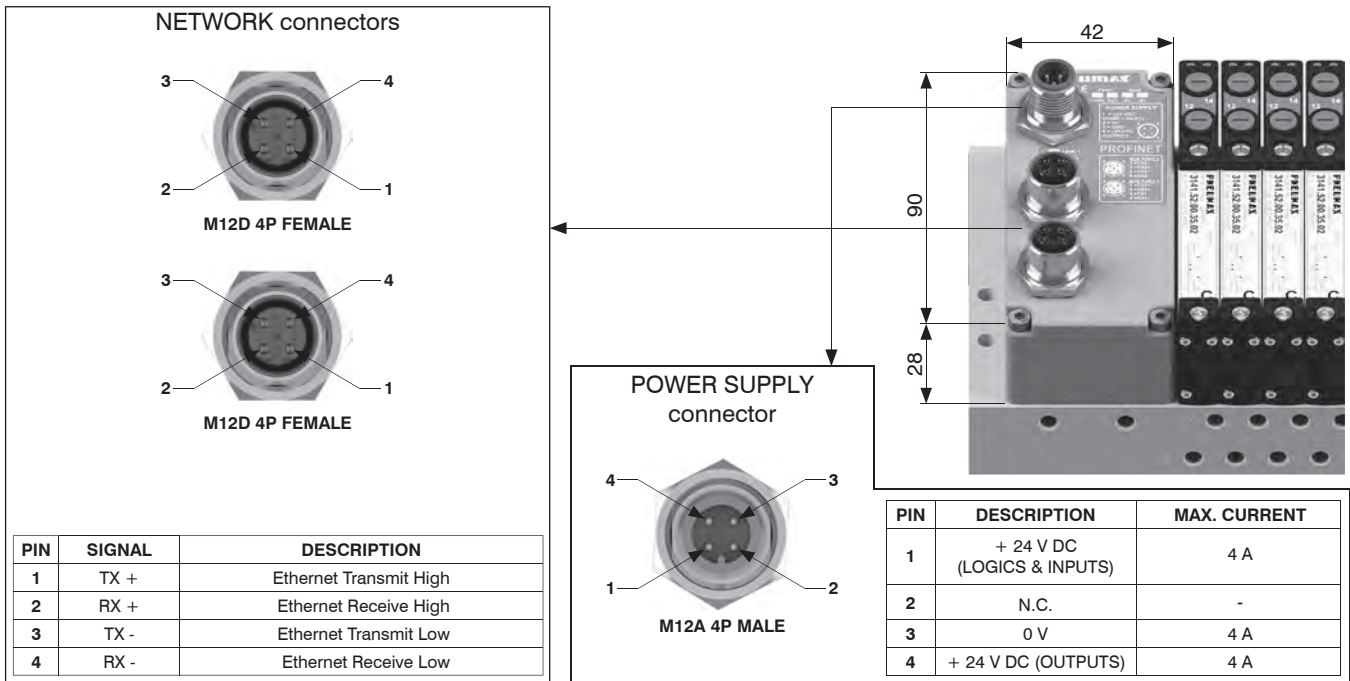

$$I_{24V\ DC\ in} = \sum_{i=1}^n I_{in,i}$$

$n$  = number of installed modules  
 $I_{in,i}$  = maximum total current absorbed by the i-th module on the INPUTS + 24 V DC supply rail (please see specifications of the single module)

In case total current is more than 4 A, it is mandatory to supply modules exceeding current limit with power supply module K5030.M12.

## CC-Link IE Field Basic protocol node

CC-Link IE Field Basic node manages 128 inputs and outputs.

Accessory modules can be connected in whatever order and configuration.

Network connection is made via 2 M12 female, type D, 4 pins, circular connectors.

Code 5730.128.48CL provides first 48 outputs, corresponding to least significant 6 bytes, are allocated to the solenoid valve positions, regardless how many they are and how many valves are installed on the manifold directly connected to the node.

Remaining 80 outputs can be used to manage output modules; bytes allocation to additional modules is fully automatic.

Coding: 5730.128.48CL

### Current limitations

Both stand alone and integrated components must operate within the current limits of the fieldbus node; please note: the solenoid valves are supplied by OUTPUTS + 24 V DC (pin 4).

To compute the maximum current on the OUTPUTS + 24 V DC, please use the following formula:

$$I_{24V\ DC\ out} = \sum_{i=1}^n I_{out,i} + m i_{EV}$$

$n$  = number of installed modules  
 $I_{out,i}$  = maximum total current absorbed by the i-th module on the OUTPUTS + 24 V DC supply rail (please see specifications of the single module)  
 $m$  = number of installed solenoid pilots  
 $i_{EV}$  = mean absorbed current per solenoid pilot (please see table below)

| Series | $i_{EV}$ |
|--------|----------|
| 3000   | 36 mA    |

For each fieldbus node, maximum deliverable current by OUTPUTS + 24 V DC supply is 4 A, moreover the sum of the currents on OUTPUTS + 24 V DC and INPUTS + 24 V DC must not exceed 4 A.

$$I_{24V\ DC\ out} + I_{24V\ DC\ in} < 4A$$

Where:

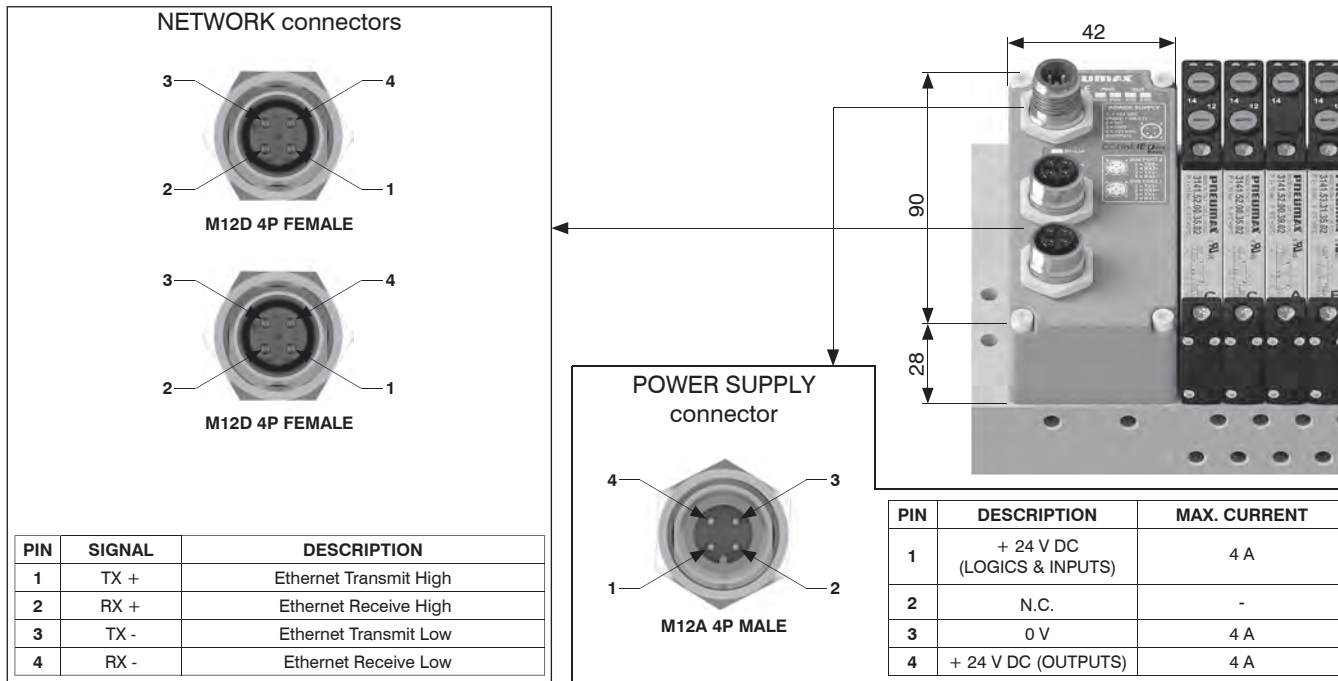

$$I_{24V\ DC\ in} = \sum_{i=1}^n I_{in,i}$$

$n$  = number of installed modules  
 $I_{in,i}$  = maximum total current absorbed by the i-th module on the INPUTS + 24 V DC supply rail (please see specifications of the single module)

In case total current is more than 4 A, it is mandatory to supply modules exceeding current limit with power supply module K5030.M12.

### IO-Link protocol interface

IO-Link interface manages 64 inputs and outputs.  
Accessory modules can be connected in whatever order and configuration.  
Electric power supply and IO-Link connection to the Master are made via M12, male, 5 pins, type A, circular connector, "CLASS B", according to IO-Link specifications.  
Electric rails L+/L- supply interface only, while P24/N24 rails supply additional modules and solenoid valves.  
Either power supplies are galvanically isolated in the IO-Link interfaces.  
IO-Link interface is available in two versions with 32 or 48 outputs allocated to solenoid valves on the manifold directly connected to the node.  
Such outputs correspond to least significant bytes and their allocation is independent of how many solenoid valves are installed.  
Remaining outputs can be used to control the modules.  
Byte allocation to additional modules is fully automatic.

Coding: 5830.64.VIK

|         |   |
|---------|---|
| VERSION | 32 = 32 output bits available for valve connections |
| V       | 48 = 48 output bits available for valve connections |

**Pt100 inputs module kit**

Pt100 inputs module digitizes signals from Pt100 probes and transfers acquired data to field bus, via network node. It is possible to connect two, three or four wires probes. Inputs module power supply is provided by + 24 V DC power input on the serial system (type A, 4 pin M12 power connector, pin 1) or by K5030.M12 additional power supply module, in case it were installed upstream of the inputs module.

### Additional power supply module kit

Additional power supply module supplies additional electric power for downstream optional modules, where “downstream” means farther from serial node, **resetting the current limits of the network node / IO-Link interface**.  
Electric connection of the module to external power supply unit occurs via an M12 4 pins type A male connector.  
M12 connector has two different pins to power up logics and inputs (Pin 1) and outputs (Pin 4).  
Presence of each power supply rail is indicated by corresponding green LED.  
When using IO-Link interface, the additional power supply module is useful for separating the module power supplies of input from the output modules placed downstream.

Series 2200 Optyma-S EVO

1  
AIR DISTRIBUTION

2200 SERIES Optyma-S EVO SOLENOID VALVES MANIFOLD

- Increased flexibility
- Digital and analogue I/O modules
- Manufactured in technopolymer
- Wide range of communication protocols

WE SPEAK EVO

The Optyma-S series becomes EVO and interfaces with the new PX series modular electronic system while still retaining all of its technical advantages. This is enriched with new features that further extend the flexibility of the product:

- Controls up to 48 electrical signals
- Manifold mounted proportional regulators
- Electro-pneumatic shut-off module

Construction characteristics

**Configuration example of single pneumatic module:**

Ø6 Bistable base, intermediate diaphragm on ports 1,3 and 5, 2x3/2 NC-NC Solenoid valve with individual exhaust accessory, 5/2 Solenoid-Solenoid valve

1  
AIR DISTRIBUTION

**Configuration example of complete group:**

- Technopolymer PX3 serial system (P-I4-D12-M12-D8G)
- Left endplates - External feeding (E)
- Ø6 Bistable base with (6HF) Solenoid valve
- Ø6 Bistable base with (6IE) Solenoid valve
- Ø4 Monostable base with (3AA) Solenoid valve
- Ø4 Monostable base with (3BB) Solenoid valve
- Ø8 Bistable base with (8FI) Solenoid valve
- Ø8 Bistable base with (8HE) Solenoid valve
- Right endplate closed (U0)

**SE-P-I4-D12-M12-D8G-E-6HF-6IE-3AA-3BB-8FI-8HE-U0**

Offset compensation plate

**Attention:** This accessory is supplied on the manifold unless otherwise stated. This is not compatible for DIN rail mounting.

DIN rail mounting support plate

**Attention:** This must be included when creating the manifold configuration. Exclude the offset compensation plate.

DIN rail fixing

AIR DISTRIBUTION

Supply ports and maximum possible size according to valves used  
Serial system node version

Multi-pin version

### Manual override actuation

#### Instable function:

Push to actuate  
(when released it moves back to the original position)

#### Bistable function:

Push and turn to get the bistable function

**Note:** we recommend the manual override is returned to its original position when not in use

### Solenoid valves installation

**Note:** Torque moment 0,8 Nm

### Sub-base assembly

Minimum torque moment: 2 Nm  
Maximum fixing torque for fittings: 2,5 Nm

Weight 200 g

the two solenoid valves mounted on the high-flow base are pneumatically and electrically in parallel.

**Attention:** the mounted solenoid valves must always be two and of the same type.

**Attention:** the additional supply is necessary to guarantee the declared flow values, the port (1), if not supplied, it must be plugged.

**Monostable configuration**

the monostable base consumes only one electrical signal and can only mount monostable solenoid valves.

**Bistable configuration**

the bistable base consumes two electrical signals and can mount both bistable and monostable solenoid valves; in the latter case one electrical signal will be lost.

AIR DISTRIBUTION

Proportional pressure regulators can be integrated into an Optyma-S EVO solenoid valve manifold, allowing the assembly to be fully or partially supplied. The regulator electronic control is independent of the node.

**Technical characteristics**

| Pneumatic characteristics                           |   |
|---|---|
| Fluid   | Air filtered at 5 micron and dehumidified |
| Minimum inlet pressure                              | Desired outlet pressure + 1 bar           |
| Maximum inlet pressure                              | 10 bar                                    |
| Outlet pressure                                     | 0 ... 9 bar                               |
| Nominal flow rate from 1 to 2 (6 bar ΔP 1 bar)      | 1100 NI/min                               |
| Discharge flow rate (6 bar with 1 bar overpressure) | 1300 NI/min                               |
| Air consumption                                     | < 1 NI/min                                |

Installation/Operation

PNEUMATIC CONNECTION

The compressed air is connected by G 1/4" threaded holes on the body. Before making the connections, eliminate any impurities in the connecting pipes to prevent chippings or dust entering the unit. Do not supply the circuit with more than 10 bar pressure and make sure that the compressed air is dried (excessive condensate could cause the appliance to malfunction) and filtered at 5 micron. The supply pressure to the regulator must always be at least 1 bar greater than the desired outlet pressure. If a silencer is applied to the discharge path the unit response time may change; periodically check that the silencer is not blocked and replace it if necessary.

ELECTRICAL CONNECTION

For the electrical connection a SUB-D 15-pole female or a M12 connector is used (accordingly to the model, to be ordered separately). Wire in accordance with the wiring diagram shown below. **Warning: INCORRECT CONNECTIONS MAY DAMAGE THE DEVICE**

NOTES ON OPERATION

If the electric supply is interrupted, the outlet pressure is maintained at the set value. However, maintaining the exact value cannot be ensured as it is impossible to operate the solenoid valves. In order to discharge the circuit downstream, zero the reference, make sure that the display shows a pressure value equal to zero and then disconnect the electric power supply. A version of the device is available that exhausts the downstream circuit when the power supply is removed (Option "A" at the end of the ordering code). If the compressed-air supply is suspended and the electric power supply is maintained a whirring will be heard that is due to the solenoid valves; an operating parameter can be activated (P18) that triggers the regulator protection whenever the requested pressure is not reached within 4 seconds of the reference signal being sent. In this case the system will intervene to interrupt the control of the solenoid valves. Every twenty seconds, the unit will start the reset procedure until standard operating conditions have been restored.

WORKING PRINCIPLE / SIMPLIFIED FUNCTIONAL DIAGRAM

Intermediate electro-pneumatic shut-off module allows you to interrupt at the same time the first 2, 4, 6 or 8 available command signals for the valves after the module itself. When the shut-off module is present, the controlled output logic signal values are equal to the input logic signal values which came from the serial node or the multi-pin module. If the supply input signal is absent, the controlled output logic signal values are all equal to zero. This module is particularly useful when control signals are used to block the valves; it is also effective both with serial management and multi-pin connection of the manifolds. It is possible to use more modules to interrupt every command signals simply by inserting them before the signals to be interrupted.

| PIN | DESCRIPTION   |
|-----|---------------|
| 1   | + 24 V DC     |
| 2   | NOT CONNECTED |
| 3   | GND           |
| 4   | NOT CONNECTED |

**Usage examples**

**EXAMPLE 1**

Manifold of 10 solenoid valves on which you want to interrupt signals 9 and 10.

Assembly:

- 4 bistable solenoid valves (not interruptible because before the module)
- 1 intermediate electro-pneumatic shut-off module, 2 signals M8 with conduit 12/14 closed
- 2 monostable solenoid valves (interruptible)
- 4 bistable solenoid valves (managed directly by the corresponding command signal)

**EXAMPLE 2**

Manifold of 10 solenoid valves on which you want to interrupt signals 9 and 12.

Assembly:

- 4 bistable solenoid valves (not interruptible because before the module)
- 1 intermediate electro-pneumatic shut-off module, 4 signals M8 with conduit 12/14 closed
- 2 monostable solenoid valves (interruptible)
- 4 bistable solenoid valves (the first one is interruptible, the others are managed directly by the corresponding command signal)

**EXAMPLE 3**

Manifold of 20 solenoid valves on which you want to interrupt signals from 9 to 16 and 23 to 26.

Assembly:

- 4 bistable solenoid valves (not interruptible because before the module)
- 1 intermediate electro-pneumatic shut-off module, 8 signals M12 with conduit 12/14 open
- 2 monostable solenoid valves (interruptible)
- 6 bistable solenoid valves (the first three are interruptible, the others are managed directly by the corresponding command signal)
- 1 intermediate electro-pneumatic shut-off module, 4 signals M8 with conduit 12/14 closed
- 8 bistable solenoid valves (the first two are interruptible, the others are managed directly by the corresponding command signal)

**Key**

- S.V. electrically managed by the shut-off module: ———
- S.V. pneumatically managed (12/14) by the shut-off module: - - - - -

## Series 2200 "Optyma-Sc"

Optyma solenoid valves series comes completed by "Compact" version, useful when a limited number of solenoid valves is needed without managing input and output signals.

Standard base blocks provide 4 or 6 solenoid valves positions. Standard base blocks can be individually sold even without solenoid valves to allow maximum configuration flexibility. Solenoid valves can be chosen from whole Optyma-S range.

Manifolds made in this way allow great room and weight saving against correspondent pneumatic group from Optyma-S series.

- Flow rate: up to 550[Nl/min], using the modular base with Ø8 quick fitting tube.
- Modular base available with Ø4, Ø6, Ø8 quick fitting tube.
- The solenoid pilots are low consumption and fitted on the same side of the valve.
- Mono and bistable valves have the same dimension.
- Easy and fast assembly on the sub base thanks to the "one screw" mounting solution.
- Possibility to replace a valve without the need of disconnecting the pneumatic pipes.
- Electrical and pneumatic connections positioned on the same side.
- Possibility to operate with different pressures and vacuum.
- 4 or 6 electric signals management (two signals per position, independently of the mounted solenoid valve).
- The electrical connection is achieved thanks to a 9 or 15 poles connector.
- The protection grade is IP65 directly integrated in the manifold components.

"Shifting time of pneumatic directional control valves or moving parts, logic devices were measured in accordance to ISO 12238:2001"

### Construction characteristics

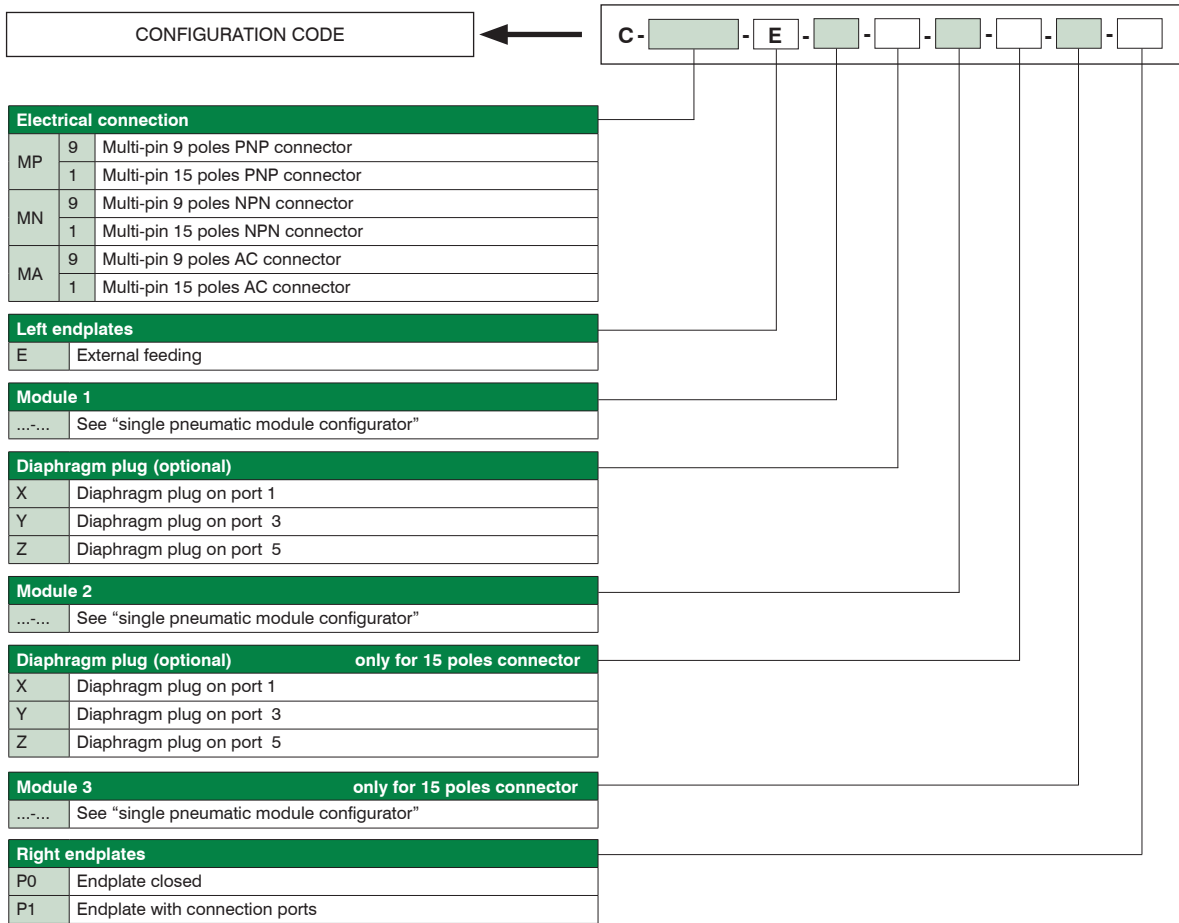

|              |                 |
|--------------|-----------------|
| Body         | Technopolymer   |
| Seals        | NBR             |
| Piston seals | NBR             |
| Springs      | Stainless Steel |
| Operators    | Technopolymer   |
| Pistons      | Technopolymer   |
| Spools       | Stainless Steel |

### Operational characteristics

|                                |  |
|--------------------------------|--|
| Supply voltage                 | 24V DC $\pm$ 10%   |
| Pilot consumption              | 0,5 W  |
| Pilot working pressure (12-14) | from 2,5 to 7 bar max.   |
| Valve working pressure [1]     | from 0 to 10 bar max.  |
| Operating temperature          | from -5°C to +50°C   |
| Protection degree              | IP40   |
| Fluid                          | Filtered air. No lubrication needed, if applied it shall be continuous |

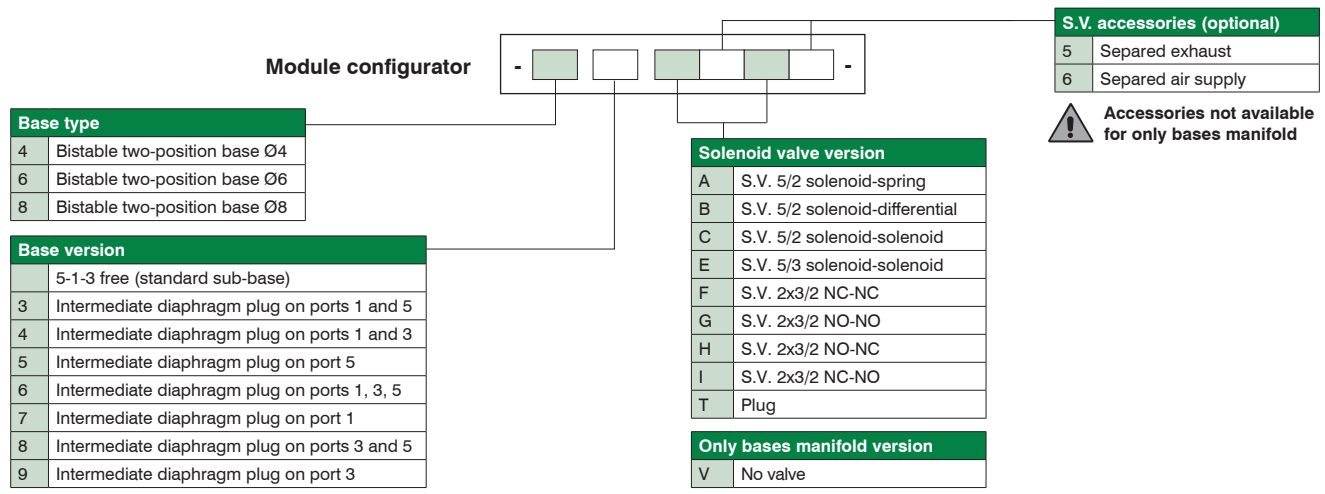

**Rules and configuration scheme**

1 AIR DISTRIBUTION

**Single pneumatic module configurator**

**⚠ It's possible to order an only base manifold by select the field V as described. This selection MUST be done for every place into the manifold. It's NOT possible to configure manifolds with positions both filled with S.V. and free.**

**Note:**

When composing the configuration, always bear in mind that the maximum number of electrical signals available is:

- 8 for multi-pin 9 poles connector (MP9)
- 12 for multi-pin 15 poles connector (MP1)

Consider that every base uses 4 signals and the number of available signals depends on the electrical connection type, so the number of bases you can use is related to the electrical connection you chose. You can order a "bases only" manifold by selecting "V" option in the solenoid valves dedicated field. If a monostable valve is used on a bistable type base (2 electrical signals occupied), an electrical signal is lost. However, this makes it possible to replace the monostable valve with a bistable valve in the same position. Diaphragm plugs are used to interrupt ports 1, 3 and 5 of the sub-base. If it is necessary to interrupt more than one port at the same time, put the letters that identify their position in sequence (e.g.: if it is necessary to intercept the ports 3 and 5 you must put the letters YZ).

**Only base configuration example: C-MP1-E-6VV-6VV-6VV-P0**

- 15 poles multi-pin connection
- Standard left endplate
- Bistable standard base Ø6 without solenoid valves (6VV)
- Bistable standard base Ø6 without solenoid valves (6VV)
- Bistable standard base Ø6 without solenoid valves (6VV)
- Right Endplates closed

**Attention:** Complete with solenoid valves before use.

**Standard configuration example: C-MP1-E-6AA-6CF-6FF-P1**

- 15 poles multi-pin connection
- Standard left endplate
- Bistable standard base Ø6 with AA type solenoid valves (6AA)
- Bistable standard base Ø6 with CF type solenoid valves (6CF)
- Bistable standard base Ø6 with FF type solenoid valves (6FF)
- Right endplate with supply and exhaust ports

**Attention:** The signal allocation is 2 signals for every positions, regardless of solenoid valve type.

PILOT STATE IDENTIFICATION LED  
(LED "ON" IDENTIFIES ACTUATED PILOT)

**DIN rail fixing**

**Supply ports and maximum possible size according to valves used**

**Manual override actuation**

**Instable function:**

Push to actuate  
(when released it moves back to the original position)

**Bistable function:**

Push and turn to get the bistable function

**Note:** we recommend the manual override is returned to its original position when not in use

1 AIR DISTRIBUTION

**Solenoid valves installation**

**Note:** Torque moment 0,8 Nm

**Sub-base assembly**

Minimum torque moment: 2 Nm  
Maximum fixing torque for fittings: 2,5 Nm

Series 2500 Optyma-F EVO

1  
AIR DISTRIBUTION

2500 SERIES Optyma-F EVO SOLENOID VALVES MANIFOLD

- Increased flexibility
- Digital and analogue I/O modules
- Manufactured in technopolymer
- Wide range of communication protocols

WE SPEAK EVO

The Optyma-F series becomes EVO and interfaces with the new PX series modular electronic system while still retaining all of its technical advantages. This is enriched with new features that further extend the flexibility of the product:

- Flow rate of 1000 NI/min
- Quick assembly using rotating pins
- Operating using different pressures and vacuum

Rules and configuration scheme

1  
AIR DISTRIBUTION

**Note:**  
When composing the configuration, always bear in mind that the maximum number of electrical signals available is:

- 32 if a 37-pole multi-pin module, a serial node or IO-Link interface are used.
- 24 if a 25-pole multi-pin module is used.

If a monostable valve is used on a bistable type base (2 electrical signals occupied), an electrical signal is lost. However, this makes it possible to replace the monostable valve with a bistable valve in the same position. Diaphragm plugs are used to interrupt ports 1, 3 and 5 of the sub-base. If it is necessary to interrupt more than one port at the same time, put the letters that identify their position in sequence (e.g.: if it is necessary to intercept the ports 3 and 5 you must put the letters YZ). If one or more ports must be interrupted more than once, the addition of the intermediate supply/discharge module is necessary.

**Electronic components configurator in technopolymer**

| U   | Separated supply (air/electric) and exhaust                 | 2 | 2 positions |
|   |   | 4 | 4 positions |
|   |   | 6 | 6 positions |
| K   | Separated supply (air/electric), exhaust and 12/14 piloting | 2 | 2 positions |
|   |   | 4 | 4 positions |
|   |   | 6 | 6 positions |
|   |   | 8 | 8 positions |

Configuration example of single module:

Bistable base, 5/2 Solenoid-Solenoid valve

Intermediate electropneumatic shut-off module 2 positions

Configuration example of complete group:

- Technopolymer PX3 serial system (P-A4-M12-M8-P4)
- Left endplates - External feeding (E)
- Bistable base with (F2) Solenoid valve
- Bistable base with (C2) Solenoid valve
- Monostable base with (A1) Solenoid valve
- Bistable base with (E2) Solenoid valve
- Bistable base with (C2) Solenoid valve
- Monostable base with (B1) Solenoid valve
- Right endplates closed (U0)

FE-P-A4-M12-M8-P4-E-F2-C2-A1-E2-C2-B1-U0

1  
AIR DISTRIBUTION

**Offset compensation plate**

**Attention:** This accessory is supplied on the manifold unless otherwise stated. This is not compatible for DIN rail mounting.

**DIN rail mounting support plate**

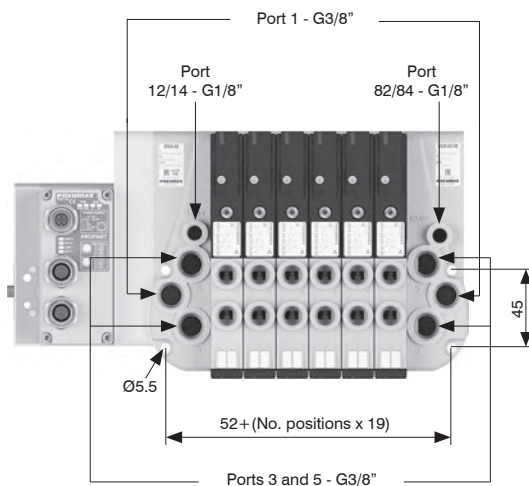

**Attention:** This must be included when creating the manifold configuration. Exclude the offset compensation plate.

**DIN rail fixing**

**Supply ports and maximum possible size according to valves used**  
Serial system node version

**Multi-pin version**

### Manual override actuation

**Instable function:**  
Push to actuate  
(when released it moves back to the original position)

**Bistable function:**  
Push and turn to get the bistable function

**Note:** we recommend the manual override is returned to it's original position when not in use

### Solenoid valves installation

**Note:** Torque moment 1 Nm

### Sub-base assembly

**Solenoid-Spring**

**WORKING PRINCIPLE / SIMPLIFIED FUNCTIONAL DIAGRAM**

Intermediate electro-pneumatic shut-off module allows you to interrupt at the same time the first 2, 4, 6 or 8 available command signals for the valves after the module itself.  
When the shut-off module is present, the controlled output logic signal values are equal to the input logic signal values which came from the serial node or the multi-pin module.  
If the supply input signal is absent, the controlled output logic signal values are all equal to zero.  
This module is particularly useful when control signals are used to block the valves; it is also effective both with serial management and multi-pin connection of the manifolds.  
It is possible to use more modules to interrupt every command signals simply by inserting them before the signals to be interrupted.

| PIN | DESCRIPTION   |
|-----|---------------|
| 1   | + 24 V DC     |
| 4   | NOT CONNECTED |
| 3   | GND           |

1 AIR DISTRIBUTION

## Usage examples

### EXAMPLE 1

Manifold of 12 monostable solenoid valves on which you want to interrupt signals 7-8.

Assembly:

- 6 monostable solenoid valves (not interruptible because before the module)
- 1 additional power supply module
- 6 monostable solenoid valves

**Note:** the first 2 of these 6 monostable solenoid valves are interruptible by the module, while the following 4 will work correctly managed directly by the corresponding command signals.

### EXAMPLE 2

Manifold of 12 monostable solenoid valves on which you want to interrupt signals 7-8-9.

Assembly:

- 6 monostable solenoid valves (not interruptible because before the module)
- 1 additional power supply module
- 3 monostable solenoid valves (interruptible)
- 1 closing plate mounted on a monostable base
- 3 monostable solenoid valves (work correctly managed directly by the corresponding command signals)

### EXAMPLE 3

Manifold of 7 monostable and 3 bistable solenoid valves in which you want to interrupt signals 2-3-4-5 and 8-9-10-11.

Assembly:

- 1 monostable solenoid valve (not interruptible because before the module)
- 1 additional electro-pneumatic shut-off module
- 6 monostable solenoid valves

**Note:** the first 4 of these 6 monostable solenoid valves are interruptible by the module, while the following 2 will work correctly managed directly by the corresponding command signals.

**Note no. 2:** The pilots of the 6 solenoid valves downstream of the intermediate electro-pneumatic shut-off module are pneumatically powered by the module itself.

- 1 additional electro-pneumatic shut-off module
- 3 bistable solenoid valves

**Note no. 3:** the first 2 of these 3 bistable solenoid valves are interruptible by the module, while the following will work correctly and are managed directly by the corresponding command signals.

**Note no. 4:** The pilots of the 3 solenoid valves downstream of the intermediate electro-pneumatic shut-off module are pneumatically powered by the module itself.

## Series 2500 Optyma-T EVO

### 2500 SERIES Optyma-T EVO SOLENOID VALVES MANIFOLD

- Increased flexibility
- Digital and analogue I/O modules
- Manufactured in technopolymer
- Wide range of communication protocols

CC-Link IE **Field Basic**

### WE SPEAK EVO

The Optyma-T series becomes EVO and interfaces with the new PX series modular electronic system while still retaining all of its technical advantages. This is enriched with new features that further extend the flexibility of the product:

- Flow rate of 750 NI/min
- Assembly with tie rods kit
- Operating using different pressures and vacuum
- Electro-pneumatic shut-off module

### Construction characteristics

| Protection degree              | IP65   |
| Fluid                          | Filtered air. No lubrication needed, if applied it shall be continuous |

**Rules and configuration scheme**

1  
AIR DISTRIBUTION

**Note:**

When composing the configuration, always bear in mind that the maximum number of electrical signals available is:

- 32 if a 37-pole multi-pin module, a serial node or IO-Link interface are used.
- 24 if a 25-pole multi-pin module is used.

If a monostable valve is used on a bistable type base (2 electrical signals occupied), an electrical signal is lost.

However, this makes it possible to replace the monostable valve with a bistable valve in the same position.

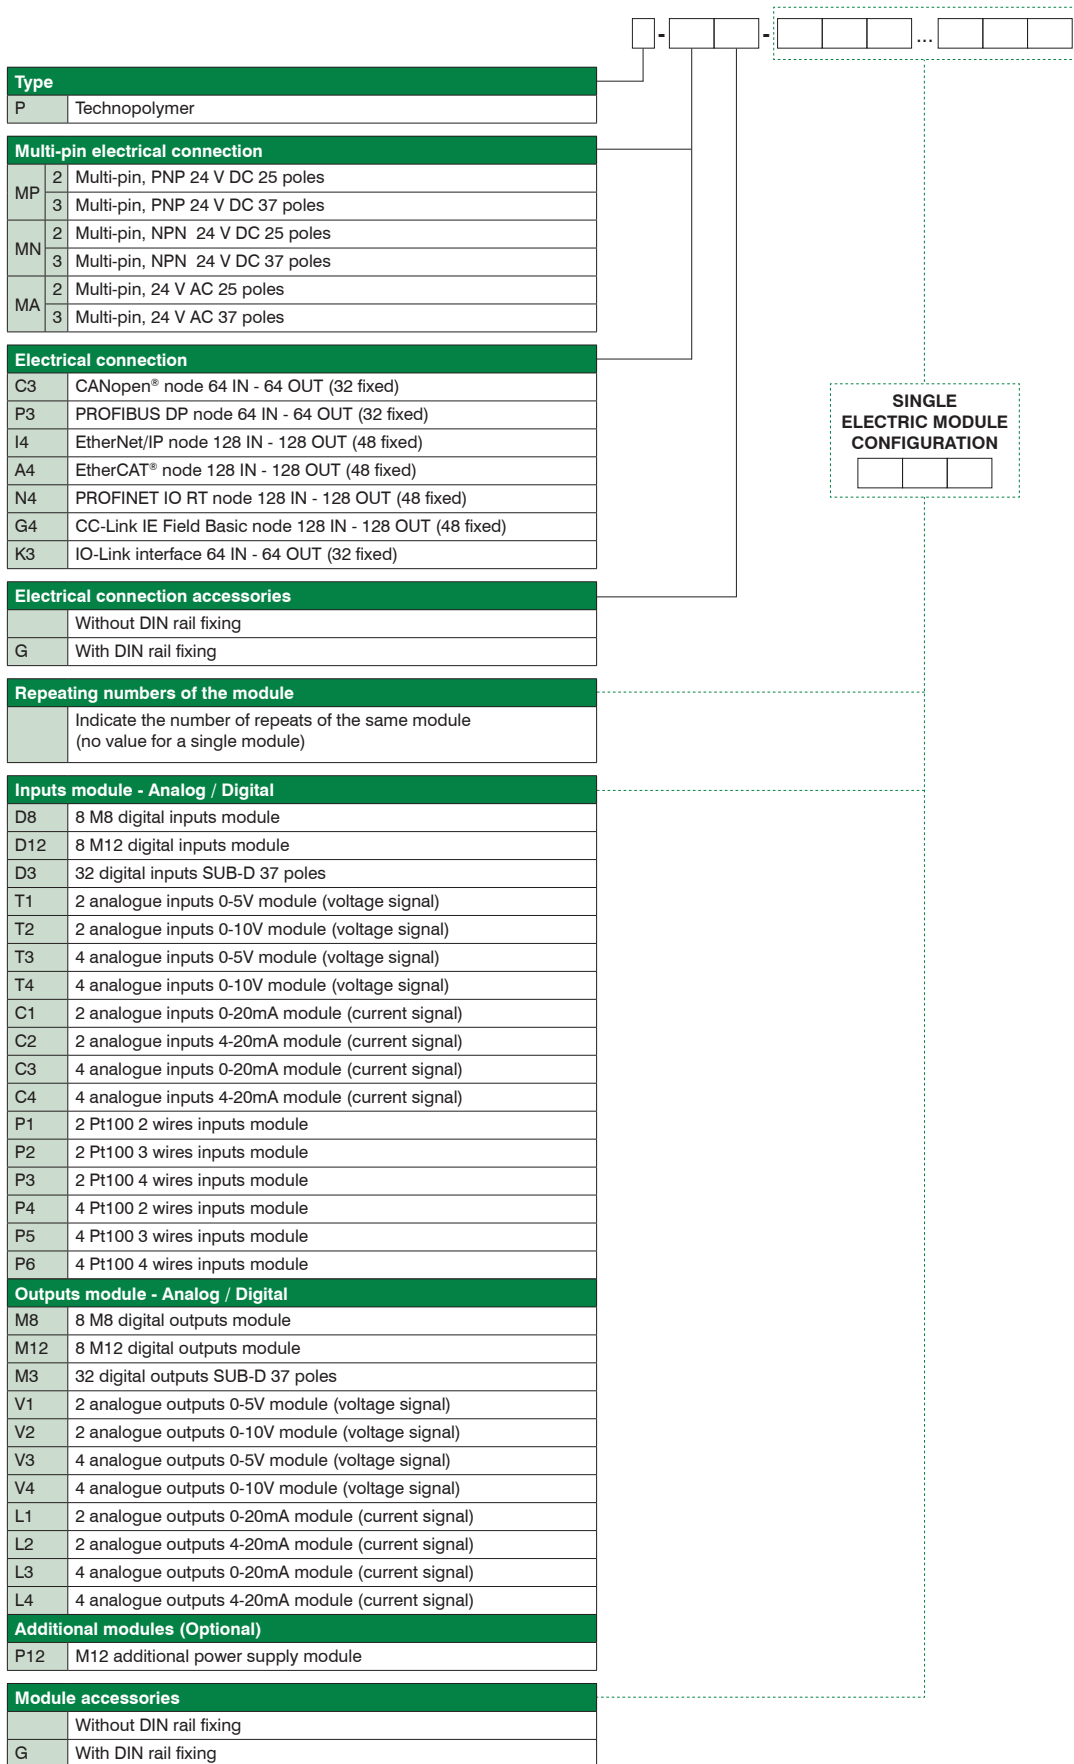

Diaphragm plugs are used to interrupt ports 1, 3 and 5 of the sub-base.

If it is necessary to interrupt more than one port at the same time, put the letters that identify their position in sequence (e.g.: if it is necessary to intercept the ports 3 and 5 you must put the letters YZ).

If one or more ports must be interrupted more than once, the addition of the intermediate supply/discharge module is necessary.

Electronic components configurator in technopolymer

Refer to the current limits indicated in the pages relating to the nodes / IO-Link interface

WORKING PRINCIPLE / SIMPLIFIED FUNCTIONAL DIAGRAM

Intermediate electro-pneumatic shut-off module allows you to interrupt at the same time the first 2, 4, 6 or 8 available command signals for the valves after the module itself. When the shut-off module is present, the controlled output logic signal values are equal to the input logic signal values which came from the serial node or the multi-pin module. If the supply input signal is absent, the controlled output logic signal values are all equal to zero. This module is particularly useful when control signals are used to block the valves; it is also effective both with serial management and multi-pin connection of the manifolds. It is possible to use more modules to interrupt every command signals simply by inserting them before the signals to be interrupted.

| PIN | DESCRIPTION   |
|-----|---------------|
| 1   | + 24 V DC     |
| 4   | NOT CONNECTED |
| 3   | GND           |

**Usage examples**

**EXAMPLE 1**

Manifold of 12 monostable solenoid valves on which you want to interrupt signals 7-8.

Assembly:

- 6 monostable solenoid valves (not interruptible because before the module)
- 1 additional power supply module
- 6 monostable solenoid valves

**Note:** the first 2 of these 6 monostable solenoid valves are interruptible by the module, while the following 4 will work correctly managed directly by the corresponding command signals.

**EXAMPLE 2**

Manifold of 12 monostable solenoid valves on which you want to interrupt signals 7-8-9.

Assembly:

- 6 monostable solenoid valves (not interruptible because before the module)
- 1 additional power supply module
- 3 monostable solenoid valves (interruptible)
- 1 closing plate mounted on a monostable base
- 3 monostable solenoid valves (work correctly managed directly by the corresponding command signals)

**EXAMPLE 3**

Manifold of 7 monostable and 3 bistable solenoid valves in which you want to interrupt signals 2-3-4-5 and 8-9-10-11.

Assembly:

- 1 monostable solenoid valve (not interruptible because before the module)
- 1 additional electro-pneumatic shut-off module
- 6 monostable solenoid valves

**Note:** the first 4 of these 6 monostable solenoid valves are interruptible by the module, while the following 2 will work correctly managed directly by the corresponding command signals.

**Note no. 2:** The pilots of the 6 solenoid valves downstream of the intermediate electro-pneumatic shut-off module are pneumatically powered by the module itself.

- 1 additional electro-pneumatic shut-off module
- 3 bistable solenoid valves

**Note no. 3:** the first 2 of these 3 bistable solenoid valves are interruptible by the module, while the following will work correctly and are managed directly by the corresponding command signals.

**Note no. 4:** The pilots of the 3 solenoid valves downstream of the intermediate electro-pneumatic shut-off module are pneumatically powered by the module itself.

**Key**

- S.V. electrically managed by the shut-off module: ———
- S.V. pneumatically managed (12/14) by the shut-off module: - - - - -

Series 2700 EVO

2700 SERIES EVO SOLENOID VALVES MANIFOLD

- Increased flexibility
- Digital and analogue I/O modules
- Manufactured according to ISO 15407-2
- Wide range of communication protocols

WE SPEAK EVO

The 2700 series becomes EVO and interfaces with the new PX series modular electronic system while still retaining all of its technical advantages. This is enriched with new features that further extend the flexibility of the product:

- Size 26 mm with nominal flow rate up to 1000 NI/min
- Compliant to directive 2014/30/UE
- Monitored solenoid valves
- Vertical configuration

Rules and configuration scheme

1 AIR DISTRIBUTION

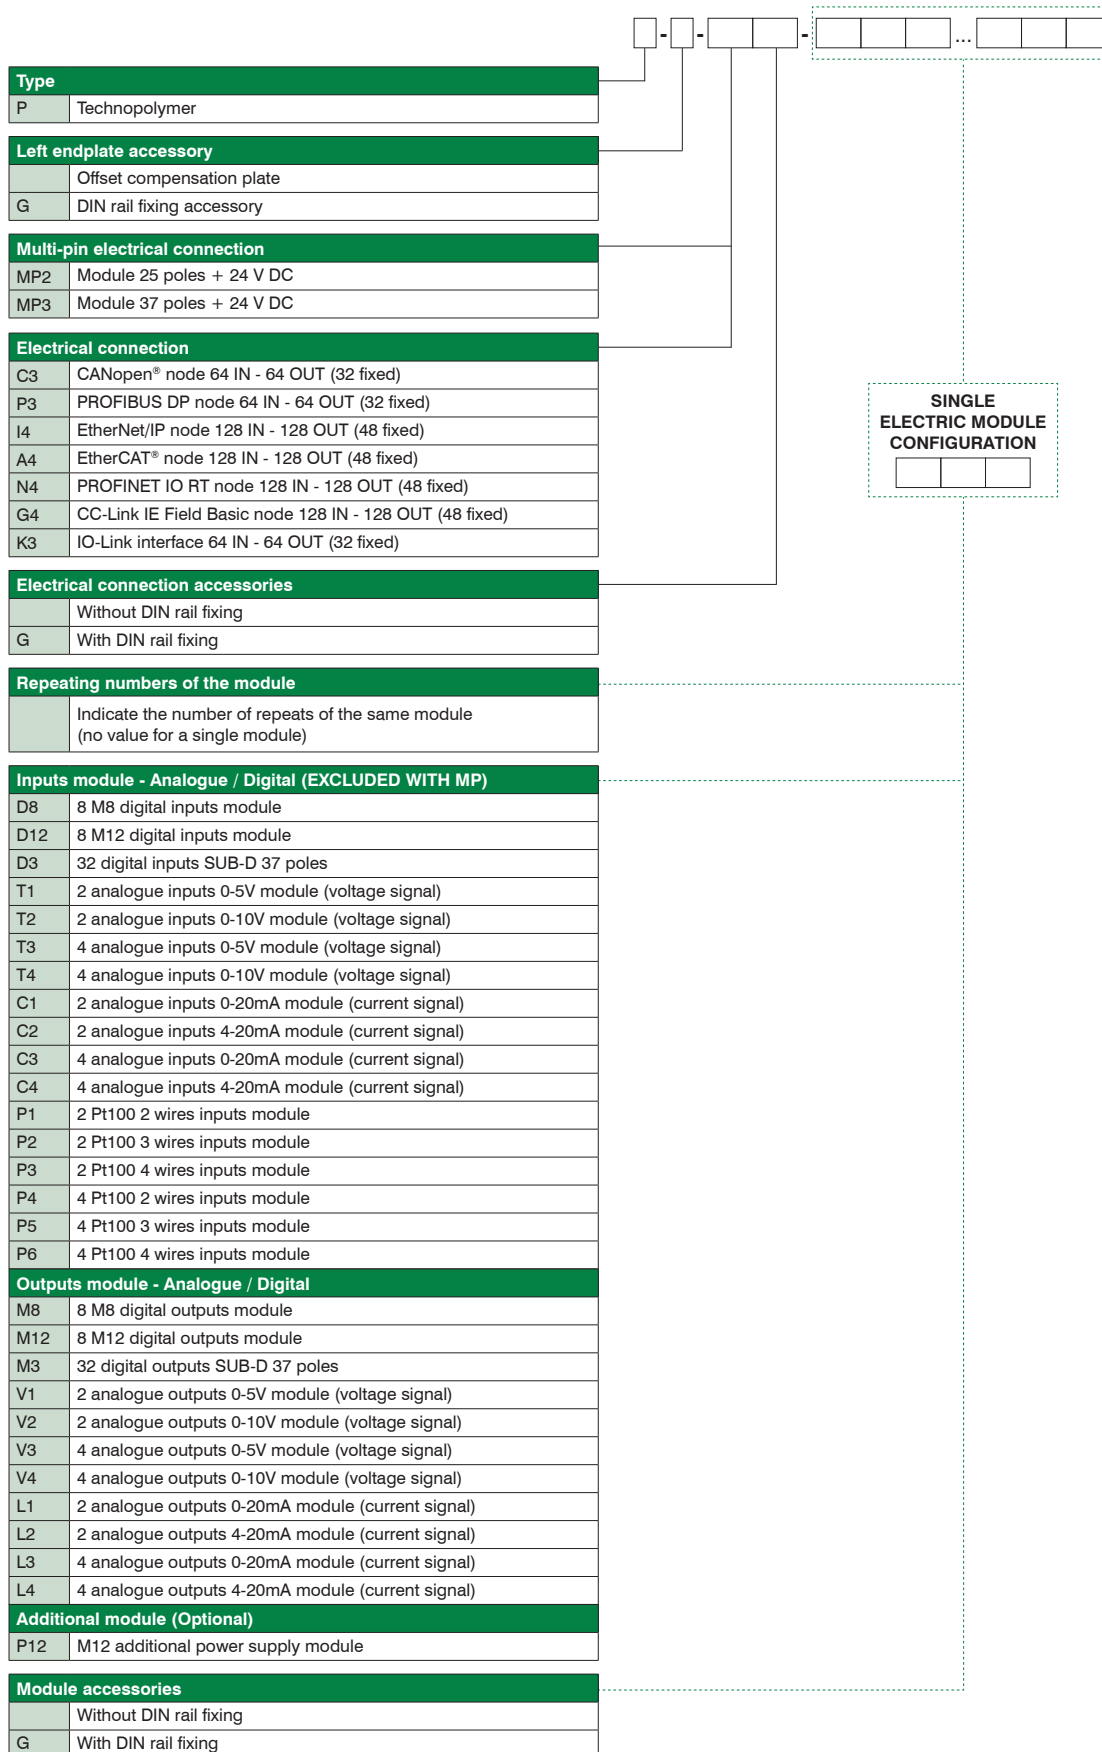

**Note:**  
When composing the configuration, always bear in mind that the maximum number of electrical signals available is:

- 32 if a 37-pole multi-pin module is used, if a node or IO-Link interface is used.
- 24 if a 25-pole multi-pin module is used.

If a monostable valve is used on a bistable type base (2 electrical signals occupied), an electrical signal is lost. However, this makes it possible to replace the monostable valve with a bistable valve in the same position. Use bases with dedicated closed ports to interrupt ducts 1, 3 and 5. If one or more ports must be interrupted more than once, the addition of the intermediate supply/discharge module is necessary.

Electronic components configurator in technopolymer

**From the top**

**Attention:** The overall dimensions shown refer to the modular (valve) sub-bases, and may differ when manifold accessories are included.

**DIN rail mounting support plate**

**Attention:** This must be included when creating the manifold configuration. Exclude the offset compensation plate.

**DIN rail fixing**

**Supply ports and maximum possible size according to valves used**

**Attention:** The overall dimensions shown refer to the modular (valve) sub-bases, and may differ when manifold accessories are included.

1 AIR DISTRIBUTION

### Manual override actuation

**Instable function:**  
Push to actuate  
(when released it moves back to the original position)

### Solenoid valves installation

1  
AIR DISTRIBUTION

### Offset compensation plate

**Attention:** This accessory is supplied on the manifold unless otherwise stated. This is not compatible for DIN rail mounting.

### Sub-base assembly

**Note:** Torque moment 4 Nm

**Attention:** Ensure the washer is mounted on the screw before tightening

1. Assemble the desired modules and tighten the fixing screws as shown in the figure below.

2. Complete the assembly with the 3100.KT.00 left endplate kit.

AIR DISTRIBUTION

3. To lock: rotate anticlockwise (in the direction of the LOCK print on the case).  
 To unlock: rotate clockwise (in the direction of the UNLOCK print on the case).  
 The same procedure shall be used to add or remove any module.

**Modules assembled for vertical configuration**

Modules for vertical configuration are as follows:

- Single external supply module
- Flow regulator module
- Shut-off and exhaust module
- Pressure regulator

**Attention:** The flow rate of the solenoid valve will be reduced compared to that shown in the general catalogue

### Solenoid-Spring 5/2

**Note B10d:**  
General Procedures for assessing pneumatic component reliability by testing performed in accordance with ISO 19973-1, Pneumatic fluid power - Assessment of component reliability by testing - Part 1: General Procedures.  
Reliability and lifetime of pneumatic valves assessed in accordance with ISO 19973-2: Pneumatic fluid power - Assessment of component reliability by testing - Part 2: Directional control valves.

Activities regarding the identification of the safety function, the estimation of the required reliability level (e.g. estimation of the PLr according to EN ISO 13849-1), the design and the production of the related safety circuit, its verification and validation are responsibilities of the operator who uses the device in its final application.  
The choice of the category and the satisfaction of its requirements according to EN ISO 13849-1 is in charge of the end-user who integrates the device in its final application while considering the final configuration of the safety circuit.  
The diagnostic coverage value guaranteed by the sensor must be calculated by the end-user in function of the final configuration of the safety circuit (e.g. in function of the PLC for safety design which controls the solenoid valve and acquires the state of the sensor).  
The estimation of the diagnostic coverage must satisfy the requirements of EN ISO 13849-1.  
According to EN ISO 13849-1, T10D value must be calculated by the enduser in function of the annual operation number in which the device will be subjected to; in any case, the device must be substituted every 20 years.

**Note B10d:**

General Procedures for assessing pneumatic component reliability by testing performed in accordance with ISO 19973-1, Pneumatic fluid power - Assessment of component reliability by testing - Part 1: General Procedures.  
Reliability and lifetime of pneumatic valves assessed in accordance with ISO 19973-2: Pneumatic fluid power - Assessment of component reliability by testing - Part 2: Directional control valves.

Activities regarding the identification of the safety function, the estimation of the required reliability level (e.g. estimation of the PL according to EN ISO 13849-1), the design and the production of the related safety circuit, its verification and validation are responsibilities of the operator who uses the device in its final application.  
The choice of the category and the satisfaction of its requirements according to EN ISO 13849-1 is in charge of the end-user who integrates the device in its final application while considering the final configuration of the safety circuit.  
The diagnostic coverage value guaranteed by the sensor must be calculated by the end-user in the function of the final configuration of the safety circuit (e.g. in function of the PLC for safety design which controls the solenoid valve and acquires the state of the sensor).  
The estimation of the diagnostic coverage must satisfy the requirements of EN ISO 13849-1.  
According to EN ISO 13849-1, T10D value must be calculated by the enduser in function of the annual operation number in which the device will be subjected to; in any case, the device must be substituted every 20 years.

Weight 615 g

- Monostable with mechanical spring return and proximity sensor
  - Control of downstream pressure in pilot channel 14
  - Safety component according to annex V of 2006/42/EC directive
  - Diagnostic system that monitors the state of the valve:
- Sensor ON: Valve at rest  
Sensor OFF: Valve activated

The "Activations time" values, are valid only for the 24 V DC 2,3W versions  
**Note:** Overall noise level depends on the final application of the device

Weight 600 g

- Suitable module for vertical configuration
- It allows the regulation of output pressure to actuators
- Actuator pressure regulation:
  - with regulator upstream of the solenoid valve (faster exhaust phase of the actuator)
  - with regulator downstream of the solenoid valve
- Possible installation of pressure regulators in succession (available on request)
- Pressure gauges adjustable in 3 positions

**Note:**  
Pressure must be set upwards.  
For greater accuracy and sensitivity, it is recommended using a regulator with a pressure rating as close as possible to the desired pressure.

**A UNIQUE CONTROL SYSTEM, A WIDE RANGE OF SOLUTIONS**

The PX Series multiseriial module can be integrated into all Optyma S-F-T and 2700 series solenoid valves manifolds in EVO versions. The solenoid valves manifolds can be configured by implementing all major communication protocols on the same electronics, ensuring maximum flexibility and reliability in any application context.

1 AIR DISTRIBUTION

### CANopen® protocol node kit

CANopen® node manages 64 inputs and outputs.

Accessory modules can be connected in whatever order and configuration.

Connection to CANopen® fieldbus is made via two M12, male and female, 5 pins, type A circular connectors, in parallel between them; connectors pinout is compliant to CiA Draft recommendation 303-1 (V. 1.3 : 30 December 2004).

Transmission speed and address, as well as termination resistor activation are set via DIP-switches.

CANopen® node is available in two versions with 32 or 48 outputs allocated to solenoid valves on the manifold directly connected to the node.

Such outputs correspond to least significant bytes and their allocation is independent of how many solenoid valves are installed.

Remaining outputs can be used to control the modules.

Byte allocation to additional modules is fully automatic.

#### Current limitations

Both stand alone and integrated components must operate within the current limits of the fieldbus node; please note: the solenoid valves are supplied by OUTPUTS + 24 V DC (pin 4).

To compute the maximum current on the OUTPUTS + 24 V DC, please use the following formula:

$$I_{24V\ DC\ out} = \sum_{i=1}^n I_{out,i} + m \cdot i_{EV}$$

$n$  = number of installed modules  
 $I_{out,i}$  = maximum total current absorbed by the i-th module on the OUTPUTS + 24 V DC supply rail (please see specifications of the single module)  
 $m$  = number of installed solenoid pilots  
 $i_{EV}$  = mean absorbed current per solenoid pilot (please see table below)

| Series         | $i_{EV}$                                     |

## PROFIBUS DP protocol node kit

PROFIBUS DP node manages 64 inputs and outputs.

Accessory modules can be connected in whatever order and configuration.

Connection to PROFIBUS DP fieldbus is made via two M12, male and female, 5 pins, type B circular connectors, in parallel between them; connectors pinout is PROFIBUS Interconnection Technology specifications compliant (Version 1.1, August 2001).

Address as well as termination resistor activation are set via DIP-switches.

PROFIBUS DP node is available in two versions with 32 or 48 outputs allocated to solenoid valves on the manifold directly connected to the node.

Such outputs correspond to least significant bytes and their allocation is independent of how many solenoid valves are installed.

Remaining outputs can be used to control the modules.

Byte allocation to additional modules is fully automatic.

Coding: K5330.64.VPB

| VERSION |   |
|---------|---|
| ✓       | 32 = 32 output bits available for valve connections |
|         | 48 = 48 output bits available for valve connections |

### Current limitations

Both stand alone and integrated components must operate within the current limits of the fieldbus node; please note: the solenoid valves are supplied by OUTPUTS + 24 V DC (pin 4).

To compute the maximum current on the OUTPUTS + 24 V DC, please use the following formula:

$$I_{24V\ DC\ out} = \sum_{i=1}^n I_{out,i} + m i_{EV}$$

$n$  = number of installed modules  
 $I_{out,i}$  = maximum total current absorbed by the  $i$ -th module on the OUTPUTS + 24 V DC supply rail (please see specifications of the single module)  
 $m$  = number of installed solenoid pilots  
 $i_{EV}$  = mean absorbed current per solenoid pilot (please see table below)

| Series          | $i_{EV}$                                     |
|-----------------|--|
| 2200 *Optyma S* | 36 mA  |
| 2500 *Optyma F* | 54 mA  |
| 2500 *Optyma T* | 54 mA  |
| Series 2700     | 24 mA (1 W version) / 100 mA (2,3 W version) |

For each fieldbus node, maximum deliverable current by OUTPUTS + 24 V DC supply is 4 A, moreover the sum of the currents on OUTPUTS + 24 V DC and INPUTS + 24 V DC must not exceed 4 A.

$$I_{24V\ DC\ out} + I_{24V\ DC\ in} < 4A$$

Where:

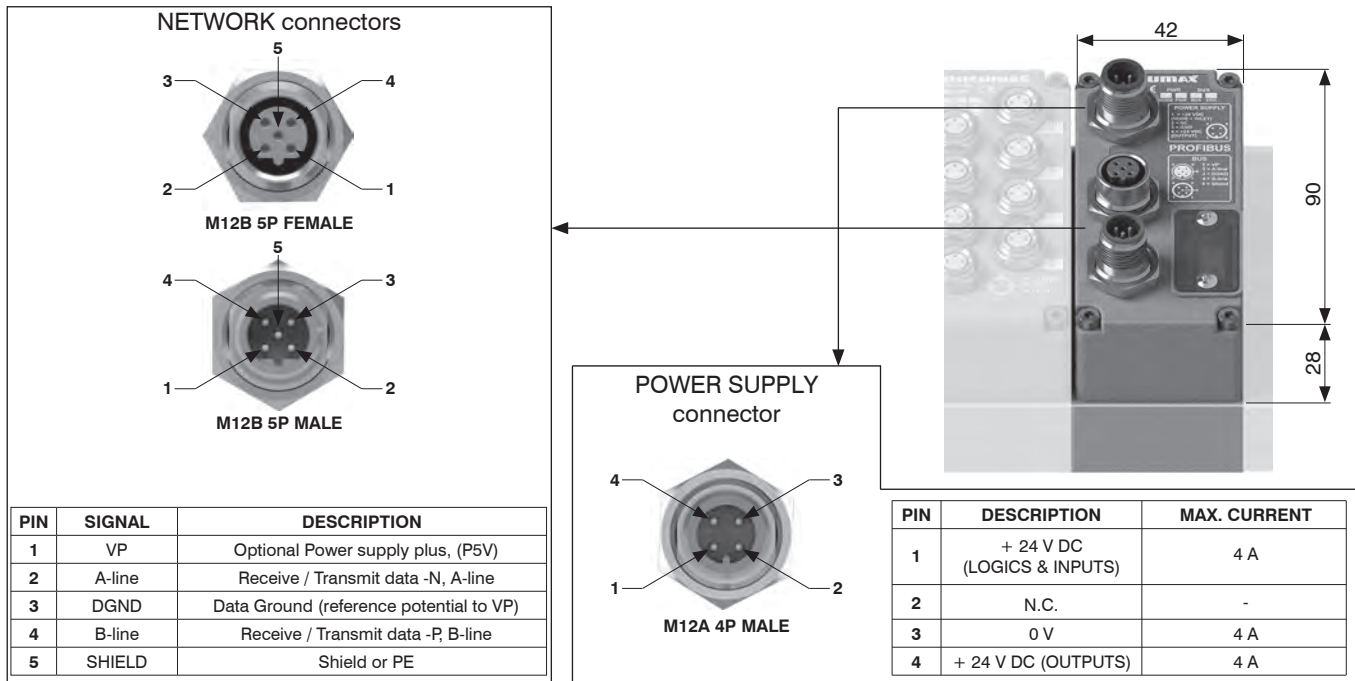

$$I_{24V\ DC\ in} = \sum_{i=1}^n I_{in,i}$$

$n$  = number of installed modules  
 $I_{in,i}$  = maximum total current absorbed by the  $i$ -th module on the INPUTS + 24 V DC supply rail (please see specifications of the single module)

In case total current is more than 4 A, it is mandatory to supply modules exceeding current limit with power supply module K5030.M12.

### IO-Link protocol interface kit

IO-Link interface manages 64 inputs and outputs.

Accessory modules can be connected in whatever order and configuration.

Electric power supply and IO-Link connection to the Master are made via M12, male, 5 pins, type A, circular connector, "CLASS B", according to IO-Link specifications.

Electric rails L+/L- supply interface only, while P24/N24 rails supply additional modules and solenoid valves.

Either power supplies are galvanically isolated in the IO-Link interfaces.

IO-Link interface is available in two versions with 32 or 48 outputs allocated to solenoid valves on the manifold directly connected to the node.

Such outputs correspond to least significant bytes and their allocation is independent of how many solenoid valves are installed.

Remaining outputs can be used to control the modules.

Byte allocation to additional modules is fully automatic.

#### Current limitations

Both stand alone and integrated components must operate within the current limits of the fieldbus node; please note: the solenoid valves are supplied by pin 2 and pin 5 (P24 / N24).

To compute the maximum current on the P24 / N24 supply, please use the following formula::

$$I_{24V\ DC\ out} = \sum_{i=1}^n I_{out,i} + m \cdot i_{EV}$$

$n$  = number of installed modules  
 $I_{out,i}$  = maximum total current absorbed by the i-th module on the OUTPUTS + 24 V DC supply rail (please see specifications of the single module)  
 $I_{in,i}$  = maximum total current absorbed by the i-th module on the INPUTS + 24 V DC supply rail (please see specifications of the single module)  
 $m$  = number of installed solenoid pilots  
 $i_{EV}$  = mean absorbed current per solenoid pilot (please see table below)

| Series          | i_EV   |
|-----------------|--|
| 2200 "Optyma S" | 36 mA  |

### 8 digital inputs module kit M8

M8 digital inputs module provides 8 M8, 3 pins, female connectors.

Inputs have PNP logic, + 24 V DC ± 10%.

It is possible to connect 2 wires devices (e.g. switches, magnetic limit switches, pressure switches, etc.) as well as 3 wires devices (e.g. proximity sensors, photocells, electronic magnetic limit switches, etc.).

Inputs module power supply is provided by + 24 V DC power input on the serial system (type A, 4 pin M12 power connector, pin 1) or by K5030.M12 additional power supply module, in case it were installed upstream of the inputs module.

### ▶ Additional power supply module kit

Additional power supply module supplies additional electric power for downstream optional modules, where “downstream” means farther from serial node, **resetting the current limits of the network node / IO-Link interface.**

Electric connection of the module to external power supply unit occurs via an M12 4 pins type A male connector.

M12 connector has two different pins to power up logics and inputs (Pin 1) and outputs (Pin 4).

Presence of each power supply rail is indicated by corresponding green LED.

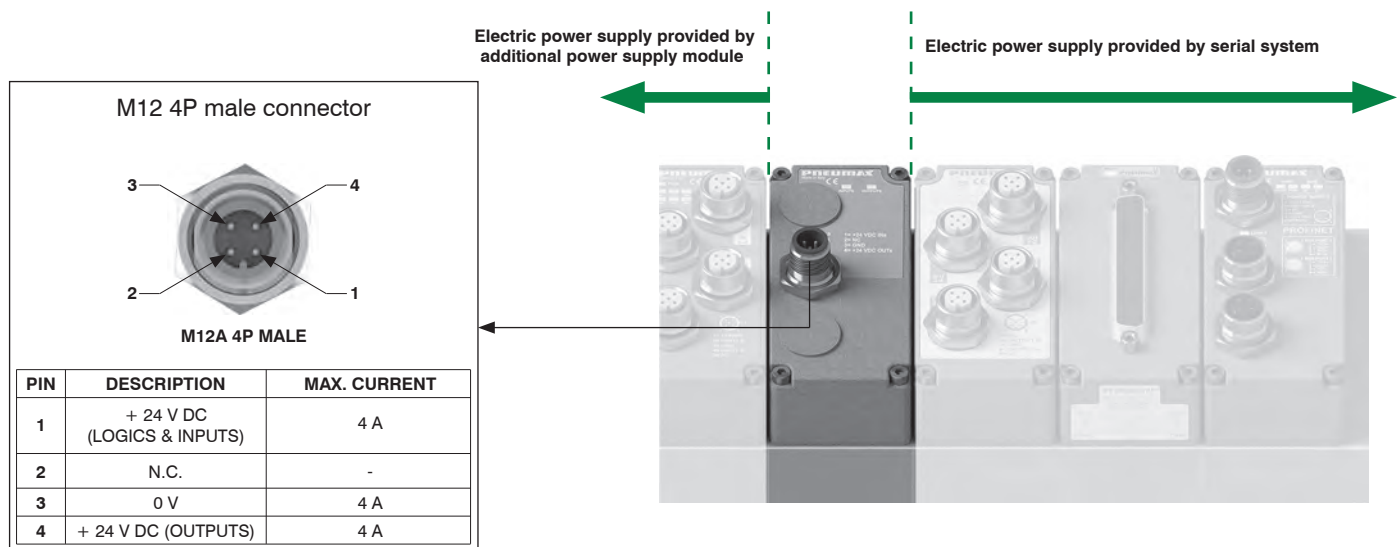

When using IO-Link interface, the additional power supply module is useful for separating the module power supplies of input from the output modules placed downstream.

## Series 2300 ENOVA®

Technical innovation, rational design, high performance and extremely compact size: these are the main features the ENOVA® series bring to the market.

Each valve comprises all the necessary pneumatic and electrical functions needed to produce a solenoid valve assembly.

There are no limits to the configuration of the solenoid valve island, as full priority has been given to the end user's needs; the addition or removal of modules is a simple operation that can be swiftly and easily achieved.

The management of the electrical signals through the valves is optimized through a patented dedicated connector in each valve.

Electrical connections are made via a twenty-five pin connector, which is capable of controlling up to twenty-two solenoids.

Electrical and pneumatic connections are located on the same module at one end of the assembly.

Serial bus nodes compatible with most common protocols are easily integrated.

Most widely used and known communication protocols, such as PROFIBUS DP, CANopen®, DeviceNet, AS-Interface can be directly integrated with the valve manifold by simply plugging the necessary module onto the electrical connection, maintaining IP65 environmental protection.

The management of inputs has also been foreseen, and can be achieved by adding one or more expansion modules directly to the serial module.

**“Shifting time of pneumatic directional control valves or moving parts, logic devices were measured in accordance to ISO 12238:2001”**

1 AIR DISTRIBUTION

### Main characteristics

- Clean profile prevents accumulation of dirt
- Compact size: modules of 12.5 mm
- Connections available: 4 , 6 , 8 mm
- IP65 protection grade
- Optimized electrical connection system
- Electrical and pneumatic line connections on one side
- Quick coupling connection system with visual indicator: locked/unlocked
- Freedom of configuration

### Functions

- 5/2 monostable
- 5/2 bistable
- 5/3 closed centres
- 2x3/2 N.C. - N.C. (5/3 open centres)
- 2x3/2 N.O. - N.O. (5/3 pressured centres)
- 2x3/2 N.C. - N.O.
- 2x2/2 N.C. - N.C.
- 2x2/2 N.O. - N.O.
- 2x2/2 N.C. - N.O.

### Construction characteristics

|                 |                                      |
|-----------------|--------------------------------------|
| Central body    | Reinforced technopolymer             |
| External casing | Reinforced technopolymer             |
| Spool seals     | PUR                                  |
| Springs         | Spring steel with protective coating |
| Operators       | Reinforced technopolymer             |
| Spools          | Aluminium 2011                       |

### Operational characteristics

|                                |  |
|--------------------------------|--|
| Supply voltage                 | 24 VDC ± 10% PNP (NPN on request)                                      |
| Pilot consumption              | 0,9 Watt   |
| Valve working pressure (1-11)  | from vacuum to 10 bar max.   |
| Pilot working pressure (12-14) | from 2,5 to 7 bar max.   |
| Operating temperature          | -5°C ... +50°C   |
| Protection degree              | IP65   |
| Fluid                          | Filtered air. No lubrication needed, if applied it shall be continuous |

**Attention:** dry air must be used for applications below 0°C"

AIR DISTRIBUTION

The electrical connection is achieved via a 25 pin connector and can manage up to 22 solenoid pilots.  
The management and distribution of the electrical signals between each valve is obtained thanks to a patented electrical connector which receives the signals from the previous module, uses one, two or none depending on the type, and carries forward to the next module the remaining.  
Bistable valves, 5/3, 2X3/2 and 2X2/2 valves which have two solenoid pilots built in, use two signals.  
The first is directed to the pilot side 14 the second to the pilot side 12.  
Monostable valves can be fitted with two type of electrical connector; one that uses only one signal (connected to the pilot side 14) and carries forward the remaining.  
The second one called CEB (Electrical contact for bistable) which uses two signals, one is needed for the valve the other is not used.  
This second solution (CEB) allows the modification of the manifold (replacement of monostable valves with bistable for example) without the need of reconfiguring the PLC outputs layout.  
On the other hand this solution limits the maximum number of valves to 11 (two signals for each position).  
Intermediate supply / exhaust modules are fitted with a dedicated electrical connector which carries forward all electric signals without using any.  
This allows the use of intermediate modules in any position of the manifold.

Example of manifold samples with the corresponding pin layout.

From the top

From the bottom

DIN rail fixing

Fixing with 90° bracket

Maximum possible size according to valves used

Manual override actuation

**Instable function:**  
Push to actuate  
(when released it moves back to the original position)

**Bistable function:**  
Push and turn to get the bistable function

**Note:** we recommend the manual override is returned to its original position when not in use

Manifold assembly

The assembly procedure should start from the end-plate which should be positioned on a flat surface. Add the requested modules by simply rotating by 180° the fastening pins by means of a 1x5.5 flat screw driver. The last module to be assembled shall be the inlet module.

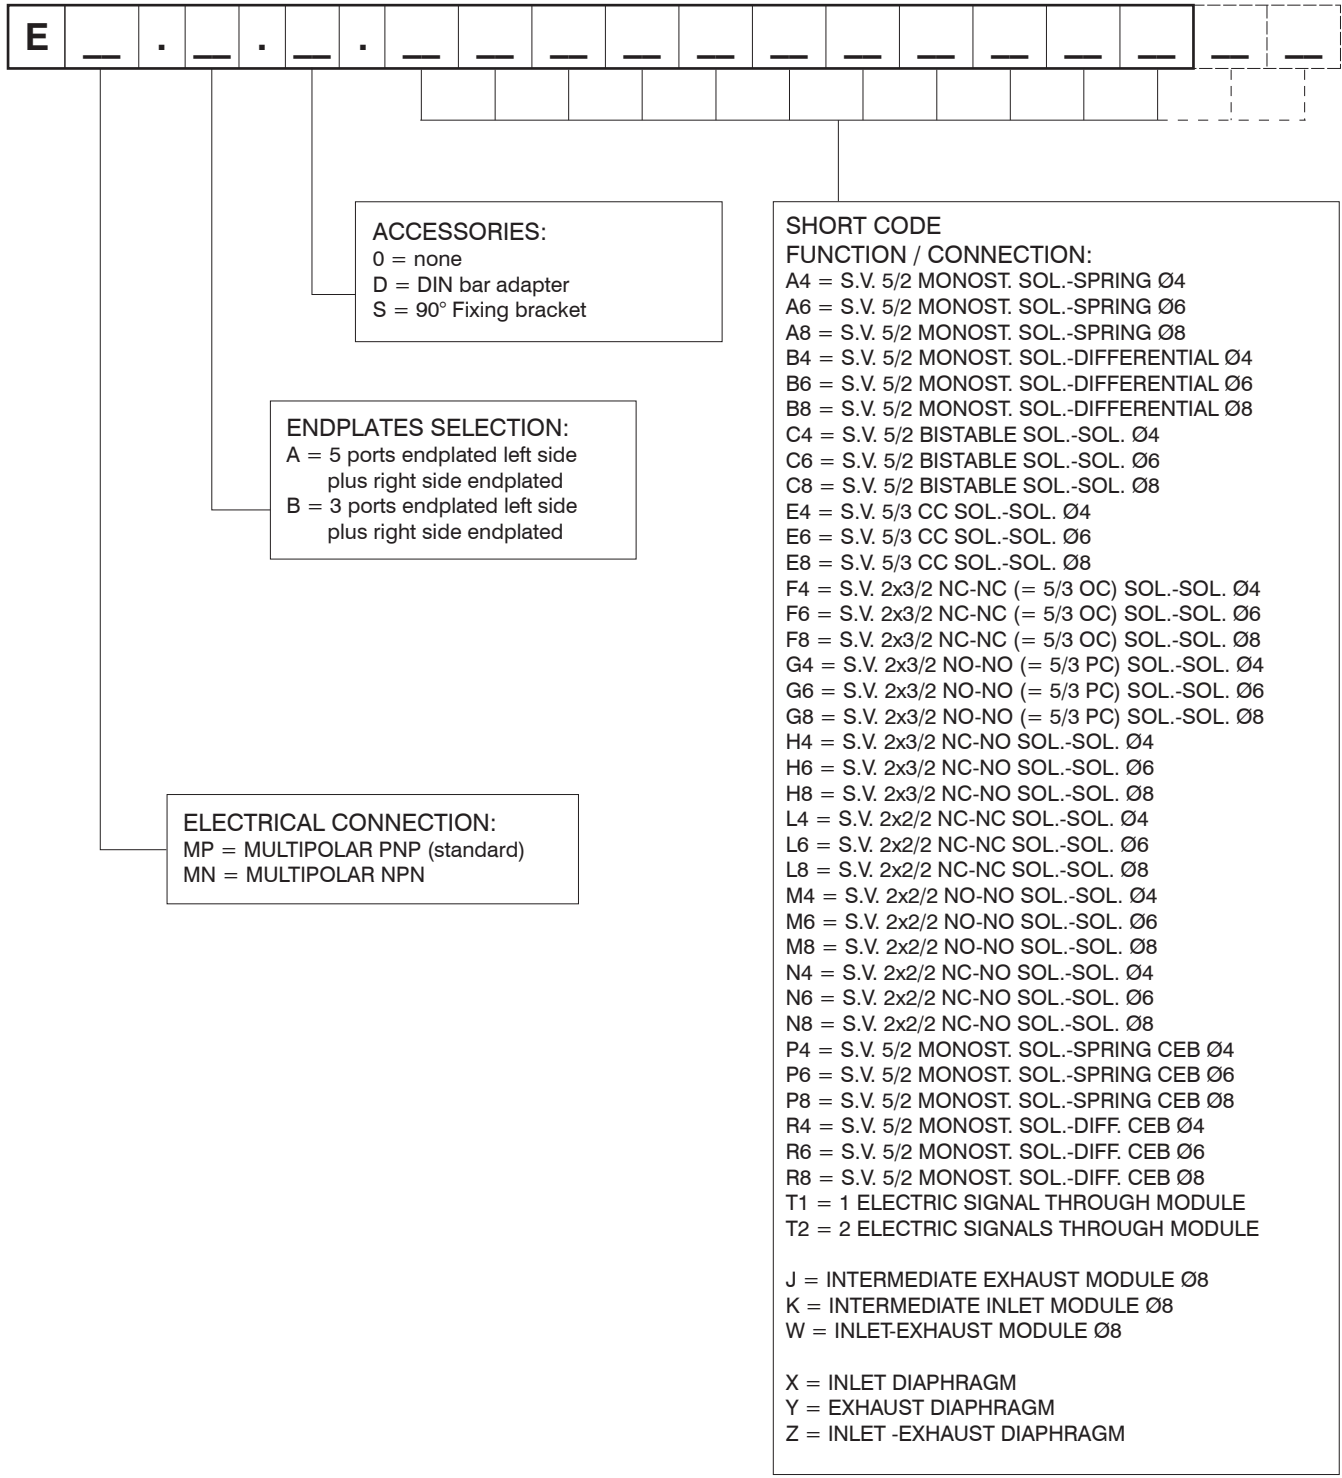

Fastening pins rotation direction:  
To lock: rotate anticlockwise (in the direction of the LOCK print on the case).  
To unlock: rotate clockwise (in the direction of the UNLOCK print on the case).  
The same procedure shall be used to add or remove any module.

1  
AIR DISTRIBUTION

**Note:**  
While configuring the manifold always bear in mind that the maximum number of electrical signals available is 22.  
N.B. CEB = Electrical connector for bistable valves ( uses two electric signals).  
Intermediate supply / exhaust modules require the same space as a valve but do not use any electric signals (as the electric connector carries forward all signals received from the module immediately before).  
The separation diaphragms are positioned between two modules and replace the standard seal therefore do not increase the dimension of the assembly.  
When using a separation diaphragm of any type, it is necessary to add, in any position between diaphragm and the manifold and plate, an extra air supply / exhaust module depending on the type of diaphragm used.

## CANopen® protocol node

CANopen® node is directly integrated on Enova® solenoid valves manifold via a 25 poles connector, normally used for multi-pin cable connection.

Enova® solenoid valves connected to node must be PNP equivalent (final 02 in ordering code).

The node can be easily installed also on solenoid valves manifold already mounted on equipment.

Node can manage up to 22 solenoid valves, and, in the same time, a max number of 3 Input modules 5200.08.

CANopen® node recognizes automatically the presence of the Input modules on power on.

Regardless of the number of Input modules connected, the manageable solenoid valves are 22.

Node power supply is made by a M12 4P male circular connector.

The separation between node 24 V DC Power supply and outputs 24 V DC allows to switch off the outputs maintaining powered the node and inputs, if present.

Connection to Bus CANopen® is possible via 2 M12 5P male - female circular connectors; these two are connected in parallel and according to CiA Draft Standard Proposal 301 V 4.10 (15 August 2006).

Transmission speed can be set by 3 dip-switches.

The node address can be set by 6 dip-switches using BCD numeration.

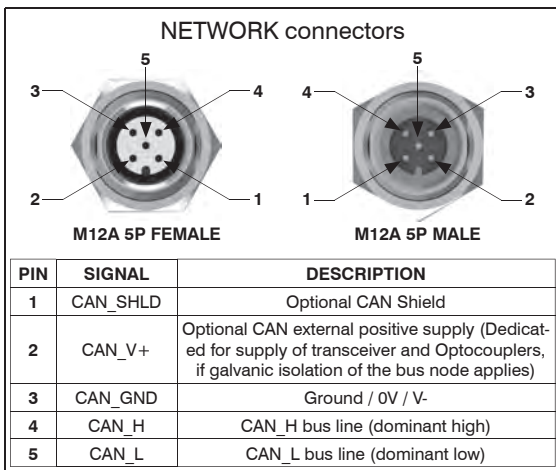

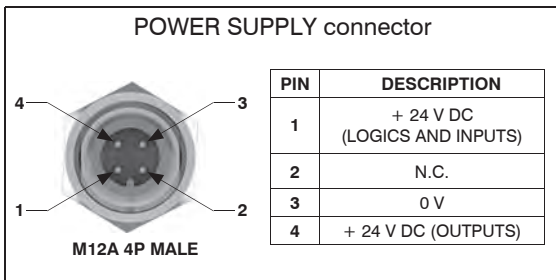

The node includes an internal terminating resistance that can be activated by a dip-switch.

## PROFIBUS DP protocol node

PROFIBUS DP node is directly integrated on Enova® solenoid valves manifold via a 25 poles connector, normally used for multi-pin cable connection.

Enova® solenoid valves connected to node must be PNP equivalent (final 02 in ordering code).

The node can be easily installed also on solenoid valves manifold already mounted on equipment.

Node can manage up to 22 solenoid valves, when is connected 0 or 1 INPUT modules, or 16 if node is fitted with 2 INPUT modules. The max number of INPUT modules 5200.08, is 2.

PROFIBUS DP node recognizes automatically the presence of the Input modules on power on.

Node power supply is made by a M12 4P male circular connector.

The separation between node 24 V DC Power supply and outputs 24 V DC allows to switch off the outputs maintaining powered the node and inputs, if present.

Connection to Bus PROFIBUS DP is possible via 2 M12 type B 5P male - female circular connectors; these two are connected in parallel and according to PROFIBUS Interconnection Technology (Version 1.1 : August 2001).

The node address can be set using BCD numeration: 4 dip-switches for the units and 4 dip-switches for the tens.

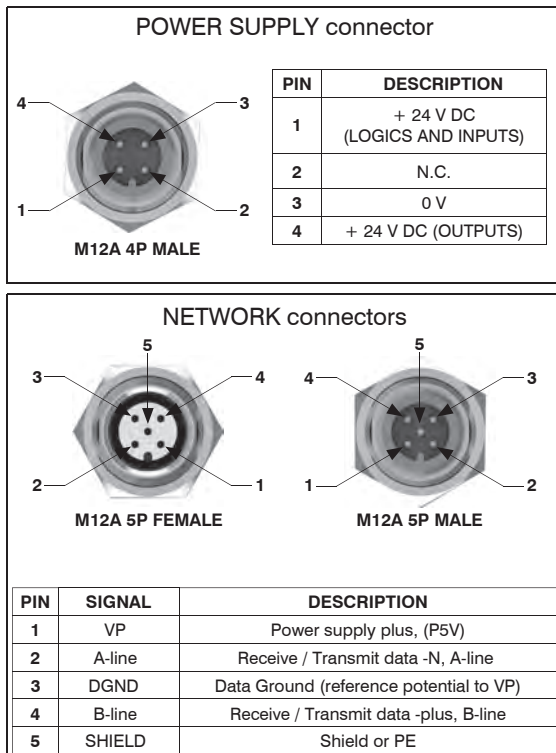

The node includes an internal terminating resistance that can be activated by a dip-switch.

### 8 input module

M8 digital inputs module provides 8 M8, 3 pins, female connectors.

Inputs have PNP logic, + 24 V DC ± 10%.

It is possible to connect 2 wires devices (e.g. switches, magnetic limit switches, pressure switches, etc.) as well as 3 wires devices (e.g. proximity sensors, photocells, electronic magnetic limit switches, etc.).

The maximum current available for all 8 outputs is 200 mA.

Each module includes a 200 mA resettable fuse. If a short circuit or a overcharge (overall current >200 mA) occur the safety device acts cutting the 24 VDC power supply to all M8 connectors on the module and switching off the green LED PWR.

Any other input module connected to the node will remain powered and will function correctly.

Once the cause of the fault disappears the green led PWR light up indicating the ON state and the node will re-start to operate.

The maximum number of Input modules supported is 3 for CANopen® and DeviceNet, 2 for PROFIBUS DP.

Coding: 5200.08

1  
AIR DISTRIBUTION

**Note:**

While configuring the manifold always bear in mind that the maximum number of electrical signals available is 22.

N.B. CEB = Electrical connector for bistable valves ( uses two electric signals).

Intermediate supply / exhaust modules require the same space as a valve but do not use any electric signals (as the electric connector carries forward all signals received from the module immediately before).

The separation diaphragms are positioned between two modules and replace the standard seal therefore do not increase the dimension of the assembly.

When using a separation diaphragm of any type, it is necessary to add, in any position between diaphragm and the manifold and plate, an extra air supply / exhaust module depending on the type of diaphragm used.

Section 02

# Air treatment

## Components for compressed air treatment

### Air service units

Wide range of components for compressed air treatment, are available in aluminium, technopolymer and steel, in several sizes with connections from 1/8" to 1" and flow rates up to 8000 NI/min.

|---|--------------------|--------------|---|------------------|--------------|

## Air quality

Compressed air is a fundamental element for the operation of various modern industrial machines.

Different compressed air purity classes are required depending on its application and the industrial sector in which it is used.

Generally, it must be free of pollutants (dusts, water and oil) in order to maintain the characteristics of the final product and guarantee safety.

Standard ISO 8573-1:2010 specifies the permissible level of pollution for every cubic meter of compressed air.

The pollutants that have been analysed are grouped in three macro-families:

- Dusts / Solid particles

Each cubic meter of compressed air could contain a maximum quantity of particles in function of its dimension.

- Water

It could be present in liquid or gaseous state.

- Oil

Each cubic meter of compressed air can contain a maximum oil quantity in any of its form: liquid, aerosol, or vapour.

To uniquely determine the purity of compressed air, it is necessary to identify a numeric value for each of the three groups of pollutants illustrated above.

In general, industrial machines require compressed air with purity class of ISO 8573-1:2010 [1:4:1] of which:

- the first number (1) refers to solid particles with maximum concentration in proportion to their size but still less than 0.1 mg/m<sup>3</sup>
- the second number (4) refers to dried air with dewpoint temperature less than +3°C
- The third number (1) refers to residual oil content less than 0.01 mg/m<sup>3</sup>

For a correct operation of our devices, we require compressed air with purity class of ISO 8573-1:2010 [7:4:4] unless otherwise indicated.

For example, our proportional regulators require compressed air with a purity class of ISO 8573-1:2010 [1:4:1].

According to standard ISO 8573-1:2010 pollutant levels could be summarized in the following table:

| Compressed air purity classes according to ISO 8573-1:2010 |  |                     |                     |  |                           |  |   |
|--|--|---------------------|---------------------|--|---------------------------|--|---|
| Class  | Particles  |                     |                     | Mass Concentration <sup>b</sup> C <sub>p</sub><br>[mg/m <sup>3</sup> ] | Humidity and Liquid Water |  | Oil   |
|  | Maximum number of particles per cubic meter<br>as a function of particle size d <sup>b</sup> |                     |                     |  | Pressure Dewpoint<br>[°C] | Concentration of liquid<br>water <sup>b</sup> C <sub>w</sub> [g/m <sup>3</sup> ] | Concentration of total oil <sup>b</sup> (liquid,<br>aerosol and vapour)<br>[mg/m <sup>3</sup> ] |
|  | 0,1 μm < d ≤ 0,5 μm  | 0,5 μm < d ≤ 1,0 μm | 1,0 μm < d ≤ 5,0 μm |  |                           |  |   |
| 0  | As specified by the equipment user or supplier and more stringent than class 1               |                     |                     |  |                           |  |   |
| 1  | ≤ 20000  | ≤ 400               | ≤ 10                | /  | ≤ -70                     | /  | ≤ 0,01  |
| 2  | ≤ 400000   | ≤ 6000              | ≤ 100               | /  | ≤ -40                     | /  | ≤ 0,1   |
| 3  | /  | ≤ 90000             | ≤ 1000              | /  | ≤ -20                     | /  | ≤ 1   |
| 4  | /  | /                   | ≤ 10000             | /  | ≤ +3                      | /  | ≤ 5   |
| 5  | /  | /                   | ≤ 100000            | /  | ≤ 100000                  | /  | /   |
| 6  | /  | /                   | /                   | 0 < C <sub>p</sub> ≤ 5   | ≤ +10                     | /  | /   |
| 7  | /  | /                   | /                   | 5 < C <sub>p</sub> ≤ 10  | /                         | C <sub>w</sub> ≤ 0,5   | /   |
| 8  | /  | /                   | /                   | /  | /                         | 0,5 < C <sub>w</sub> ≤ 5   | /   |
| 9  | /  | /                   | /                   | /  | /                         | 5 < C <sub>w</sub> ≤ 10  | /   |
| X  | /  | /                   | /                   | C <sub>p</sub> > 10  | /                         | C <sub>w</sub> > 10  | >5  |

<sup>b</sup> At reference condition:

 - absolute air pressure 100 kPa = [1 bar] (a)  
 - relative water vapour pressure 0

## Series Airplus

2

AIR TREATMENT

- **Modular system**
- **Compact and linear design**
- **Maximum flexibility and reliability**
- **Plug-n-play connection thru couplig flanges**
- **Integral safety elements in assembled group**
- **Available in 4 sizes with connections from 1/8" to 1"**
- **ATEX certification (II 2GD or II 3GD)**

### Construction and working characteristics

Pneumax AIRPLUS air treatment units have been designed and developed to increase reliability, modularity and user-friendly operation and installation. Thanks to a wide range of modules with different functions and characteristics, together with a wide choice of materials selection, make the Pneumax AIRPLUS air treatment units a robust, reliable and extremely flexible modular system, adaptable to many applications. AIRPLUS units correctly assembled are modular with unlimited configurations and solutions, capable of fulfilling all functions of compressed air treatment such as filtration, regulation, lubrication, interception and distribution.

Filters, including coalescing and active carbon elements as well as oil separators provide adequate media filtration. Precise and reliable pressureregulation is provided by the regulators or filter-regulators which are also available with a built in pressure gauge or integral digital pressure switch. The lubricators provide oil mist lubrication in proportion to air being consumed whilst the shut-off valves, which can be operated pneumatic, electro-pneumatic or manually will effectively manage the supply and exhaust of the compressed air system. The range is completed by a series of complementary modules, such as pneumatic connection by-pass, pressure switch and progressive start-up. The complete assembly is built up using the individual modules connected together via quick coupling flanges which provide a 'plug & play' assembly. This provides quick and easy installation or replacement. Pneumax Airplus air treatment units can be integrated with safety elements that comply with EN-ISO 13849-1 and CE marking according to EU Machinery Directive, Annex V.

AIRPLUS air treatment units are available in 4 different sizes, with connections from 1/8 "to 1" and flow rates performances up to 8000NI/min.

### Instructions for installation and use

The FRL unit should be installed as close as possible to the 'point of use'. The air flow direction should follow the direction indicated on the individual modules, following threaded connections (IN and OUT). Units fitted with a with bowl should be mounted vertically with the bowl facing down. All units should be operated in accordance to the specified pressure and temperature ranges and should never exceed 0.2 Hz max frequency whether pulsing inlet pressure occur.

Fittings shall be mounted according to the maximum torque specified.

### Maintenance

To carry out maintenance which involves the removal of the caps or supports above the body and where the retaining screws are present, it is necessary to remove the cover plates beforehand. If you attempt to dis-assemble the caps or supports without removing the cover plates and retaining screws, the integrity and function of the device could be compromised.

Bowls, plugs and supports are assembled with a bayonet type mechanism. In order to remove them, rotate anti-clockwise until the mechanical stop is reached and then remove from the body (for the bowls firstly press down the green safety button). Bowls and transparent parts can be cleaned with water and neutral soap. Do not use solvents or alcohol. Filtering elements (present in filters and filter regulators) made of HDPE can be regenerated by washing and blowing them. In order to remove them it is necessary to remove the bowl unscrew the filter element and replace it with a new one or clean it. Lubricator oil recharge might be performed during normal operation (apart size 1) depressurizing the bowl thru dedicated plug. Pneumax suggest refilling oil directly into the bowl. No others maintenance operation shall be carried out by client itself, due to complexity of the assembly and Pneumax dedicated post-maintenance testing activities.

### FILTRATION

Filter pore sizes from 50  $\mu\text{m}$  to 5  $\mu\text{m}$

Coalescing filter with retention efficiency of 99,97% particle removal down to 0,01  $\mu\text{m}$

Coalescing/oil removal filter with oil residual up to 0,01 ppm

Carbon filter with oil residual up to < 0,003 ppm

### REGULATION

Regulators and filter regulators

Pressure regulation range up to 12 bar

Available with integrated pressure gauge, pressure switch or G1/8" connection

### LUBRICATION

Manual adjustment of oil quantity complete with visual indicator

Oil refilled with pressurized circuit

Oil mist lubrication

### SHUT OFF

Manual, pneumatic or electropneumatic operation availability

Manual version lockable up to 3 padlock

### COMPLEMENTARY MODULES

Pressure switch

Air intake

Progressive start-up valve

### SAFETY

Integrated diagnostic system

Single version CAT.2 in accordance with ISO EN 13849 up to PL=C

Double version CAT.4 in accordance with ISO EN 13849 up to PL=E

In accordance with EU Machinery directive, annex V

2

AIR TREATMENT

**Filters (F)**

- ▶ Double filter action: air flow centrifugation and filter element
- ▶ Available in 4 sizes with flow rates up to 14000 NI/min and connections from 1/8" to 1"
- ▶ Filtering cartridge made of HDPE available in three different filtration grades (5µm, 20µm, 50µm)
- ▶ Filter cartridge can be regenerated by washing / blowing it or replaced
- ▶ Bowl assembly via bayonet type quick coupling mechanism with safety button
- ▶ Semi-automatic or automatic drain
- ▶ ATEX certification (II 2GD or II 3GD)
- ▶ Inlet pressures up to 20 bar

**Note**

In order to ensure that any fluid discharged by the auto drain assembly is adequately drained away, it is recommended you use a 6mm fitting and tube.

**Coalescing filters (DA)**

- ▶ Coalescing filter
- ▶ Available in 4 sizes with flow rates up to 8000 NI/min and connections from 1/8" to 1"
- ▶ Filtering cartridge with filtration grade of 0,01 μm
- ▶ Filtering performances 99.97% (particles up to 0.01 μm)
- ▶ Bowl assembly via bayonet type quick coupling mechanism with safety button
- ▶ Semi-automatic or automatic drain
- ▶ Atex certification (II 2GD or II 3GD)
- ▶ Inlet pressures up to 20 bar

**Note**

In order to ensure the high level of filtration, it is recommended that a 5μ filter is installed before the coalescing filter. In order to ensure that any fluid discharged by the auto drain assembly is adequately drained away, it is recommended you use a 6mm fitting and tube

**Oil removal filters (DBV - DCV - DAV)**

- ▶ Oil removal filter with coalescing filter element
- ▶ Available in 2 sizes with connections from 3/8" to 1"
- ▶ Particle removal up to 0,01 μm
- ▶ Oil residual 0,01 ppm
- ▶ Cartridge clogging level display:
  - green color - ok
  - red color - warning ( $\Delta p > 0,5$  bar)
- ▶ Bowl assembly via bayonet type quick coupling mechanism with safety button
- ▶ Automatic drain mounted as standard
- ▶ Atex certification (II 2GD or II 3GD)

**Note**

In order to ensure the high level of filtration, it is recommended that a 5μ filter is installed before the coalescing filter. In order to ensure that any fluid discharged by the auto drain assembly is adequately drained away, it is recommended you use a 6mm fitting and tube

► Carbon filters (DD)

- ▶ Carbon filter
- ▶ Available in 2 sizes with connections from 3/8" to 1"
- ▶ Active carbon cartridge with built in particulate filter
- ▶ Used to remove oil vapours, hydrocarbons, odours and particles
- ▶ Oil residue up to <0,003 ppm (max input aerosol 0.01 ppm)
- ▶ High absorption capacity, with low differential pressure
- ▶ Filtering performances 99.97% (particles up to 0.01 μm)
- ▶ Bowl assembly via bayonet type quick coupling mechanism with safety button
- ▶ Semi-automatic drain
- ▶ Atex certification (II 2GD or II 3GD)
- ▶ Inlet pressures up to 20 bar

**Note**

A 5μ filter, coalescing filter and oil removing filter must be installed prior to the carbon filter, this is to ensure that the carbon filter operates correctly and safe guard the life of the active carbon element. It may also be necessary to replace the carbon element at fixed intervals.

| Semi-automatic drain | 15,7               | 18    | Plastic hose connector Ø6 |

**Filter regulators (E - EM - EW - EP - EZ)**

- ▶ Filter - diaphragm pressure regulator with relieving
- ▶ Available in 4 sizes with flow rates up to 8000 NI/min and connections from 1/8" to 1"
- ▶ Low hysteresis rolling diaphragm and balanced spool
- ▶ Filtering element made of HDPE available in 3 different filtration grades (5µm, 20µm and 50µm)
- ▶ Bowl assembly via bayonet type quick coupling mechanism with safety button
- ▶ Semi-automatic or automatic drain
- ▶ Available in four pressure ranges up to 12 bar
- ▶ Fitted with panel mounting locking ring
- ▶ Available with pressure gauge or digital pressure switch integrated
- ▶ Atex certification (II 2GD or II 3GD)
- ▶ Inlet pressures up to 20 bar

**Note**

For installations where a more accurate and constant pressure is required, the unit should be installed as close as possible to the point of use. In order to ensure that any fluid discharged by the auto drain assembly is adequately drained away, it is recommended you use a 6mm fitting and tube.

**Digital pressure switch**

- ▶ 3 color digital LCD display, easy readout
- ▶ 4 units of measurement for pressure indication
- ▶ Optional PNP or NPN digital output
- ▶ N.O. and N.C. output contact selection directly on the digital pressure switch
- ▶ Available with M8-3PIN connector or 3 wire cable length 2 m

2

Connector

| Technical characteristics      |   |
|--------------------------------|---|
| Pressure range and display     | 0 ... 10 bar  |
| Max. inlet pressure            | 15 bar  |
| Fluid                          | 40µm filtered and dehumidified air  |
| Display unit of measurement    | MPa - kgf/cm <sup>2</sup> - bar - psi   |
| Supply voltage                 | 12 ... 24 VDC   |
| Current consumption            | ≤40mA (without load)  |
| Digital output type            | PNP - NPN   |
| Type of contact output         | Normally Open - Normally Closed   |
| Max. load current              | 125 mA  |
| Digital output activation mode | single threshold with fixed hysteresis - window with fixed hysteresis - window without hysteresis |
| Digital output activation time | 0.05s - 0.25s - 0.5s - 1s - 2s - 3s (selections for chattering-proof options)                     |
| Display characteristics        | Double 3 1/2 digit display<br>Digital output status indication<br>Three-pushbuttons touchpad      |
| Indicator accuracy             | ±2% full scale value ± 1 digit  |
| Protection degree              | IP40  |
| Working temperature            | 0 °C ... 50 °C  |
| Cable section                  | 3 x 0,129 mm <sup>2</sup> , Ø4 mm, PVC  |

**Regulators (R - RM - RW - RP - RZ)**

- ▶ Diaphragm pressure regulator with relieving
- ▶ Available in 4 sizes with flow rates up to 8000 NI/min and connections from 1/8" to 1"
- ▶ Low hysteresis rolling diaphragm and balanced spool
- ▶ Available in four pressure ranges up to 12 bar
- ▶ Fitted with panel mounting locking ring
- ▶ Available with pressure gauge or digital pressure switch integrated
- ▶ Atex certification (II 2GD or II 3GD)
- ▶ Inlet pressures up to 20 bar

**Note**

For installations where a more accurate and constant pressure is required, the unit should be installed as close as possible to the point of use.

2 AIR TREATMENT

► Piloted pressure regulators (RP - RMP - RPP)

- Piston piloted pressure regulator
- Available with pressure gauge or digital pressure switch integrated
- Atex certification (II 2GD or II 3GD)
- Inlet pressures up to 20 bar

**Note**

Always regulate the rising pressure.

## Digital pressure switch

- ▶ 3 color digital LCD display, easy readout
- ▶ 4 units of measurement for pressure indication
- ▶ Optional PNP or NPN digital output
- ▶ N.O. and N.C. output contact selection directly on the digital pressure switch
- ▶ Available with M8-3PIN connector or 3 wire cable length 2 m

### Output circuit wiring diagrams

**► Pressure regulators for manifold (B - M - P)**

- Diaphragm pressure regulator with relieving
- Available with 2 front outputs connections G1/8" or with 1 front output and integrated pressure gauge on the opposite side
- Low hysteresis rolling diaphragm and balanced spool
- Available in four pressure ranges up to 12 bar
- Fitted with panel mounting locking ring
- Available with integrated pressure gauge or digital pressure switch
- Air supply can be applied by both directions (Right or Left)
- Max. 6 off pressure regulators in manifold configuration
- Atex certification (II 3GD)

**Note**

For installations where a more accurate and constant pressure is required, the unit should be installed as close as possible to the point of use.

▶ **Manifold pressure regulators**

- ▶ Manifold pressure regulators
- ▶ Available in four pressure ranges up to 12 bar
- ▶ Inlet pressure common for the whole manifold of pressure regulator
- ▶ A maximum of 6 pressure regulators can be mounted
- ▶ Atex certification (II 3GD)
- ▶ Assembly with X or Y flanges

**Lubricators (L)**

- ▶ Oil mist lubricator
- ▶ Available in 4 sizes with flow rates up to 16000 NI/min and connections from 1/8" to 1"
- ▶ Bowl assembly via bayonet type quick coupling mechanism with safety button
- ▶ Variable orifice size in function of the flow rate
- ▶ Oil quantity regulation mechanism and oil quantity visualization dome made of polycarbonate (PC)
- ▶ Oil refill plug
- ▶ Lubricator oil recharge with pressurized system
- ▶ Available with low level electrical sensor NO and NC
- ▶ Atex certification (II 2GD or II 3GD)

| C1                   | Ø 3,5 mm                |
| C2                   | PVC                     |
| C3                   | 2x 0,25 mm <sup>2</sup> |

▶ Shut off valves (VL - VP - VE)

- ▶ 3/2 N.C. shut off valve
- ▶ Suitable for system downstream pneumatic feeding or exhaust
- ▶ Manual, pneumatic and electropneumatic operation available
- ▶ Up to 3 off manual operation lockable device available (closed position)
- ▶ Atex certification (II 2GD or II 3GD)

▶ Progressive start-up valve (AP - APW)

- ▶ Progressive start-up valve
- ▶ Available in 4 sizes with flow rates up to 15000 NI/min and connections from 1/8" to 1"
- ▶ Suitable for downstream system gradual pressurization
- ▶ Downstream circuit filling time regulated via a built in flow regulator
- ▶ Full pressure is allowed once the down stream circuit pressure reaches 50% of the inlet pressure
- ▶ Atex certification (II 2GD or II 3GD)

► Pressure switch (PP)

- 2 to 10 bar adjustable pressure switch with electrical connection
- The electrical connection is made by mean of a 15 mm connector (DIN 43650 type C)
- The microswitch contact could be normally closed or open (change overswitch)

► Air intake with pressure gauge or digital pressure switch integrated (PM-PW-PP-PZ)

- Available with pressure gauge or digital pressure switch integrated
- Air intake connection device available
- Material and version wide selection
- Available in 4 sizes with connections from 1/8" to 1"
- Atex certification (II 2GD or II 3GD) for Integrated pressure gauge version

**Digital pressure switch**

- ▶ 3 color digital LCD display, easy readout
- ▶ 4 units of measurement for pressure indication
- ▶ Optional PNP or NPN digital output
- ▶ N.O. and N.C. output contact selection directly on the digital pressure switch
- ▶ Available with M8-3PIN connector or 3 wire cable length 2 m

► Supply and discharge valves SAFELINE

2

AIR TREATMENT

Upon implementation of the AIRPLUS size 3 series, air-treatment units, PNEUMAX develops a supply and discharge valve, with an electropneumatic control and spring-return, fitted with a diagnostic system regarding the state of the valve, with the possibility of creating a double channel to determine the system's redundancy.

The valve, as a safety feature, provides the interruption of the air supply and the exhaust of the air circuit it is connected to. The version with one single channel emphasises the features of an EV 3/2 NC, monostable with electropneumatic control and spring-return, whose operation involves:

- condition of the VALVE AT REST, with a DE-ENERGISED coil; Port 1 (air supply) is not been connected to Port 2 (downstream air circuit). Port 2 is discharged out of Port 3;
- condition of the VALVE ACTIVATED, with an ENERGISED coil; Port 1 (air supply) is connected to Port 2 (downstream air circuit), with Port 3 (Discharge) closed. By de-energising the coil, the system resets the condition of VALVE AT REST by means of the return spring, which repositions the spool. Once again Port 2 (downstream air circuit), discharges via Port 3.

The state of the valve is constantly monitored by a diagnostic system, using a Hall effect sensor, which reads the position of the spool and consequently takes note of the valve's position.

The sensor is in the ON position when the valve is at rest (DE-ENERGISED coil), while it is in the OFF position when the valve is activated (ENERGISED coil).

The sensor is in the OFF position under conditions of an activated valve (DE-ENERGISED coil), indicating a possible problem.

**The SAFELINE supply and discharge valve in the single version is a classified component in CATEGORY 2 according to ISO EN 13849 and is appropriate for use in safety circuits until PL=C.**

The version with a double redundant channel is made using two single solenoid valves 3/2 NC provided with diagnostics, mounted in series so that the Port 2 of the first solenoid valve is linked to the Port 1 of the second solenoid valve.

It is sufficient that only one of the EV is de-energised to guarantee the discharge of the air circuit.

If one of the two EV must remain blocked due to a malfunction, the other one ensures the discharge function of the pneumatic installation. Even in this case, the diagnostic system of both solenoid valves constantly monitors the state of the 2 single EV.

**The SAFELINE supply and discharge valve in the double version is a classified component in CATEGORY 4 according to ISO EN 13849 and is appropriate for use in safety circuits until PL=E.**

Both single and double solenoid valves are provided with the following certifications released by BUREAU VERITAS:

- TYPE APPROVAL certificate according to the EN ISO 13849 regulations
- certification of examination of compliance in accordance to the machinery directive 2006/42/CE

The AIRPLUS SAFELINE are solenoid valves marked as ATEX

| Minimum working pressure    | 2,5 bar  |
| Maximum working pressure    | 10 bar   |

### Instructions for installation and use

Undertake the installation respecting the safety requirements with regards to the system and components for hydraulic and pneumatic transmissions. Install the device as close as possible to the point of use. Its assembly is possible in any position. Pay attention to the flow direction, indicated on the main body with the labels IN and OUT. During the components discharge, high levels of noise occur.

The use of a silencer on the discharge port is recommended. Ensure there is sufficient space for assembly during the installation process. Please ensure that the discharge area is always clear, and in case a silencer is used, periodically verify that it is not obstructed.

It is possible to integrate and install the device in an existing AIRPLUS group or in a new installation, or else to use the device individually attaching it by aligning the assembled unit with the relevant fastening flange for the supply and discharge valve, or to use the device individually attaching it by aligning the assembled unit with the type "Y" fastening flange for the double supply and discharge valve

**WARNING!**

Pay particular attention to external factors such as the nearness of live wires, magnetic fields, metallic objects providing magnetic conduction very close to the device, which may influence and disturb the diagnostic system.

**WARNING!**

The electrical connection must be made exclusively by specialized personnel, using components that have no voltage present. Only use power supplies which can guarantee a safe electrical isolation of the working voltage in accordance to IEC/EN 60204-1. Additionally, observe the requirements anticipated by the PELV circuits in accordance to IEC/EN 60204-1.

### Care and maintenance

**WARNING!**

Do not connect or disconnect the device when energised! Do not open and/or disassemble the parts that are included in the energised valve. Once the power supply is disconnected, wait for a few minutes before opening or disassembling parts of the valve that result in its disassembly.

Before carrying out any operation, it is essential to remove the pneumatic and power supply to the device and wait for the residual pressure to be completely discharged.

Please ensure that the discharge is always clear, and in case a silencer is used, periodically verify that it is not obstructed.

Periodically remove any dust deposits from the valve using a damp cloth.

Use soapy water to clean the device.

Do not use corrosive or alcohol-based products.

For maintenance operations on internal components, please consult with PNEUMAX SPA.

\* no additional letter required.

Dimensions

Installation tip of a safety system by means of a single valve.

**Please note: the safety valve is not sufficient alone to guarantee the safety function.**

**Its setup requires the use of a monitoring device.**

In this setup, the SIEMENS® 3SK1112-1BB40 monitoring device has been indicated, activated by an S2 start / reset pushbutton, blocked by an S1 emergency shutdown key.

Said monitoring device, by means of the readings of the sensor placed inside the valve (reading made by means of the K1 relay), operates the activation of the valve itself.

The monitoring device transmits the safety status as an output.

The preliminary estimate and the final verification of the achieved PL are the responsibility of the designer of the part of the system dedicated to providing the safety function.

**Note: with a single valve, it is not possible to obtain a PL greater than “c”.**

### Setup suggestions

- The double stop pushbutton is connected to clamps T1-IN1 and T2-IN2 of 3SK1112-1BB40.
- The start / reset pushbutton is connected between +24 V and the INS clamp of 3SK1112-1BB40.
- The valve is supplied between 0 V (Pin 3 of the supply connector) and the 14 clamp of 3SK1112-1BB40 (Pin 2 of the supply connector).
- The HALL effect sensor is supplied between 0 V (Pin 3 of the supply connector) and 24 V (Pin 1 of the supply connector).
- The HALL effect sensor drives (Pin 4 of the supply connector) the K1 relay, whose N.O. contact will be connected between the monitoring device's clamp T2 and INF.

The circuit diagram of the **suggested** configuration is provided, along with the configuration of 3SK1112-1BB40.

| 3SK1112-1BB40 Configuration |  |
|-----------------------------|--|
| <input type="checkbox"/>    | 1 Autostart / Monitored Start                |
| <input type="checkbox"/>    | 2 Cross fault detection OFF / ON             |
| <input type="checkbox"/>    | 3 2 single-ch. sensors / 1 double-ch. sensor |
| <input type="checkbox"/>    | 4 Startup test YES / NO                      |

### Analysis of malfunctions

The diagnostic system (monitoring device plus sensor) has the purpose of verifying the appearance of malfunctions within the valve that undermine the safety function. In particular, (with 3SK1112-1BB40 configured as in the illustration), the K1 relay prevents resetting the system by means of S2 when the coil is de-energised, but the sensor remains in the OFF position (K1 remains de-energised).

**Installation tip of a safety system by means of a double valve**

**Please note: the safety valve is not sufficient alone to guarantee the safety function.**

**Its setup requires the use of a monitoring device.**

In this setup, the SIEMENS® 3SK2112 monitoring device has been indicated, activated by an S2 start / reset pushbutton, blocked by an S1 emergency shutdown key. Said monitoring device, by means of the readings of the sensors placed inside the double valve, operates the activation of the valve itself. The preliminary estimate and the final verification of the achieved PL are the responsibility of the designer of the part of the system dedicated to providing the safety function.

**Setup suggestions**

- The double stop pushbutton is connected to clamps T1-F-IN1 and T2-F-IN2 of 3SK2112.
  - The start /reset pushbutton is connected between +24 V and the F-IN10 clamp of 3SK2112.
- The double valve, for notation simplicity, is indicated as consisting of 2 valves: S.V.1 and S.V.2

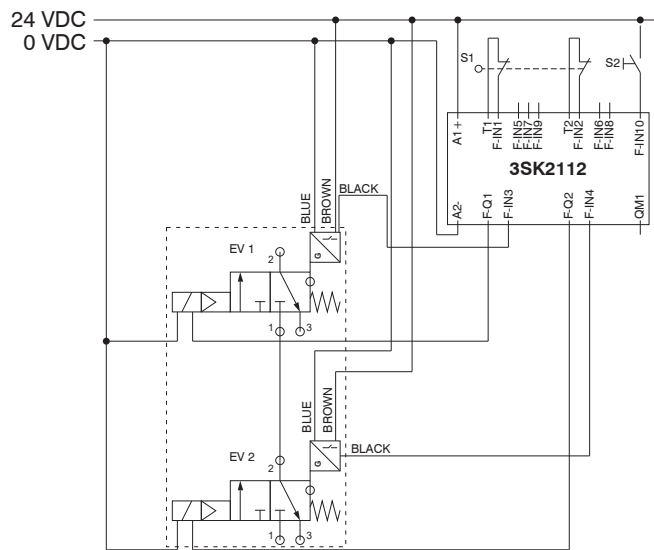

**S.V.1**

- The valve is supplied between 0 V (Pin 3 of the supply connector) and the F-Q1 clamp of 3SK2112 (Pin 2 of the supply connector).
- The HALL effect sensor is supplied between 0 V (Pin 3 of the supply connector) and 24 V (Pin 1 of the supply connector).
- The HALL effect sensor is attached (Pin 4 of the supply connector) to the monitoring device's F-IN3 clamp.

**S.V.2**

- The valve is supplied between 0 V (Pin 3 of the supply connector) and the F-Q2 clamp of 3SK2112 (Pin 2 of the supply connector).
- The HALL effect sensor is supplied between 0 V (Pin 3 of the supply connector) and 24 V (Pin 1 of the supply connector).
- The HALL effect sensor is attached (Pin 4 of the supply connector) to the monitoring device's F-IN4 clamp.

The circuit diagram of the **suggested** configuration is provided.

**Analysis of malfunctions**

The diagnostic system (monitoring device plus sensors) has the purpose of verifying the appearance of malfunctions within the valves, which undermine the safety function. In particular, the monitoring device must be appropriately programmed to avoid the system's reset by means of S2 when both coils are de-energised and at least one sensor remains in an OFF position.

## Regulatory Framework

The purpose of the EU's Machinery Directive is to define the health and safety requirements in the framework of designing and constructing machinery.

Since 2009, the new Machinery Directive has become effective in the European Union.

Member countries of the EU are required to implement this standard.

The manufacturers of machinery can comply with the Machinery Directive applying the harmonised standards listed in the Official Journal of the European Union.

The design and manufacture of safety controls are developed in compliance with one of the two important harmonised standards:

| UNI EN ISO 13849-1  |
|---|
| Safety of machinery<br>Safety-related parts of control systems<br>Part 1: General design principles |

| EN 62061  |
|---|
| Safety of machinery<br>Functional safety of electrical, electronic and programmable<br>control systems regarding safety |

The UNI EN ISO 13849-1 standard is one of the most important harmonised standards, which has been widely used; it is intended to provide a guide to principles for design and integration of safety-related parts of the control system.

Each safety-related control system must be designed and constructed in accordance with the principles of ISO 12100 and ISO 14121 by which the possible risks are considered and assessed, in view of the intended uses and the reasonably anticipated incorrect uses.

The parts of a machinery's control system are called "Safety-related parts of control systems". Their capacity to perform a safety function under predictable conditions is assigned by means of five possible levels called "**performance levels**" (PL). These levels are defined in terms of probability of dangerous malfunction per hour.

| PL - Performance Level | Average probability of dangerous malfunction per hour (1/h) |
|------------------------|---|
| a                      | $\geq 10^{-5}$ up to $< 10^{-4}$                            |
| b                      | $\geq 3 \times 10^{-6}$ up to $< 10^{-4}$                   |
| c                      | $\geq 10^{-6}$ up to $< 3 \times 10^{-6}$                   |
| d                      | $\geq 10^{-7}$ up to $< 10^{-6}$                            |
| e                      | $\geq 10^{-8}$ up to $< 10^{-10}$                           |

The calculated PL must be greater or equal to the necessary value, which arises from the calculation of the risk correlated to one single function and to the need to reduce it to an acceptable level.

| Calculated risk assessment |   |                                 |                |
|----------------------------|---|---------------------------------|----------------|
| S1 - Slight danger         | F1 - Occasional danger and brief exposure | P1 - possibly avoidable danger  | PL= a<br>PL= b |
|                            |   | P2 - largely unavoidable danger |                |
| S2 - Serious danger        | F1 - Occasional danger and brief exposure | P1 - possibly avoidable danger  | PL= c<br>PL= d |
|                            |   | P2 - largely unavoidable danger |                |
|                            | F2 - Frequent danger and long exposure    | P1 - possibly avoidable danger  | PL= e          |
|                            |   | P2 - largely unavoidable danger |                |

► **Manifold unit**

- Modular system
- Compact and linear design
- Maximum flexibility and reliability
- Up to 10 items assembly with unlimited configuration
- Plug-n-play connection thru couplig flanges
- Maintenance possible without completely disassembling the group
- Integral safety elements in assembled group
- Material and version wide selection
- Available in 4 sizes with connections from 1/8" to 1"
- Atex certification (II 2GD or II 3GD)

\* Module configuration shall be identified according to individual technical details of each items included in applicable manifold.

**Manifold assembly**

The assembly operation of selected items (module) is carried out thru dedicated quick connection flanges. Both aluminum and techno polymer materials selection available, with fixing holes in case of panel mounting configuration. Due to its design, Pneumax connection flanges allow user-friendly maintenance activities with no need of entire manifold disassembling procedure.

Thanks to a wide range of modules with different functions and characteristics, together with a wide choice of materials selection, make the Pneumax AIRPLUS air treatment units a robust, reliable and extremely flexible modular system, adaptable to different applications.

AIRPLUS units properly assembled are modular with unlimited configurations and solutions and capable to satisfy and fulfill all their functions of compressed air treatment. Pneumax Airplus air treatment units can be integrated with safety elements that comply with EN-ISO 13849-1 and CE marking according to EU Machinery Directive, Annex V. Simple instruction provides an easy manifold configuration.

### Configuration instructions

Manifold configuration as per following instructions.

As a result, a dedicated code will be provided, and the two main parameters will be identified, as follow:

- Features applicable to all items included in manifold (i.e. version, size, connection, flow direction).
- Assembly sequence of the single item + coupling flanges.

Note: Max 10 items for each manifold.

The group can be configured by consulting the Pneumax catalog here:

<http://pneumax.partcommunity.com/3d-cad-models/>  
also reachable through a special link available on the home page of the Pneumax website

### Coding

Initial code that identifies the main characteristics of the group such as:  
- version  
- size and connections  
- flow direction  
These will be the same for all the modules included in manifold, in accordance with the characteristics of the individual items available.

Code that identifies the succession of individual modules and related coupling flanges included in manifold from module 1 to 10.

| Version |   |
|---------|---|
| N       | Technopolymer body and metal inserts (not available for size 4) |
| T       | Technopolymer body and thread (not available for size 4)        |
| P       | Aluminum body (not available for size 1)                        |
| L       | Aluminum body, low temperature (not available for size 1)       |

| Size and connections |   |
|----------------------|---|
| 1A                   | Size 1 - G1/8" only for N version                                       |
| 1B                   | Size 1 - G1/4" only for T - N versions                                  |
| 1C                   | Size 1 - 1/4" NPT only for N version                                    |

Examples of module identification: 5 µm filter, automatic drain, metal bowl is identified as: **F A S T**

- Filter regulator with pressure gauge 50 µm, 0-12 bar semi-automatic drain, without relieving, technopolymer bowl protection, PA bowl, is identified as: **E M C D L N**

**AIRPLUS assembled groups configuration**

Configuration example of a Size 3, G1/2" technopolymer group SX - DX composed of:

- Shut off valve
- Filter regulator, 20µm, 0-12bar, automatic drain
- Lubricator with electrical minimum level sensor NO
- Electric shut off valve, 22mm, without coil
- Progressive start-up valve

AIR TREATMENT

Applicable order code:

Initial code that identifies the main characteristics of the group such as:  
- version  
- size and connections  
- flow direction  
These will be the same for all the modules included in manifold, in accordance with the characteristics of the individual items available.

Code that identifies the succession of individual modules and related coupling flanges included in manifold from module 1 to 10.

G T 17 3B - VL - Y - EMBDS - X - LAN - X - VEB2 - Y - AP

**GT173 - VL - Y - EMBDS - X - LAN - X - VEB2 - Y - AP**

**Flanges positioning schematic**

Here below some indications related to flanges positioning according to the number of seats. Pneumax recommend configuration in compliance with the following schematic.

**Y:** Y type flange (Aluminium or technopolymer)  
**X:** X type flange (Aluminium or technopolymer)  
**1...10:** AIRPLUS modules

2  
AIR TREATMENT

**Quick coupling flanges**

Pneumax Airplus quick coupling flanges series allow both module rapid fixing and panel mounted configuration. Due to its design, Pneumax connection flanges allow user-friendly maintenance activities with no need of entire manifold disassembling procedure. Two types of flange are available: X type flange for assembling the modules together, and Y type flange suitable for panel mounted also.

Both types are made of technopolymer or die-cast aluminum.

Technopolymer flanges

▶ Panel mounted pressure regulators (RP)

- ▶ Diaphragm pressure regulator with relieving
- ▶ Aluminium body version
- ▶ High flow rates with low pressure drops
- ▶ Available with 1/8" and 1/4" connections
- ▶ Low hysteresis rolling diaphragm and balanced spool
- ▶ Available in four pressure ranges up to 12 bar
- ▶ Fitted with panel mounting locking ring
- ▶ Atex certification Atex II 2GD

**Note**

For installations where a more accurate and constant pressure is required, the unit should be installed as close as possible to the point of use.

▶ Panel mounted pressure regulator with pressure gauge built into the adjusting knob (RP)

- ▶ Diaphragm pressure regulator with relieving
- ▶ Aluminium body version
- ▶ High flow rates with low pressure drops
- ▶ Available with G1/8" and G1/4" connections
- ▶ Low hysteresis rolling diaphragm and balanced spool
- ▶ Available in four pressure ranges up to 12 bar
- ▶ Fitted with panel mounting locking ring
- ▶ Atex certification Atex II 2GD
- ▶ Ø 24,5 pressure gauge built into adjusting knob
- ▶ Pressure gauge with 4 mounting positions relative to IN connection (0°-90°-180°-270°)
- ▶ Class 4 pressure gauge (±4% full scale)

**Note**

For installations where a more accurate and constant pressure is required, the unit should be installed as close as possible to the point of use.

## Series 1700

- Modular sistem
- Available for 4 sizes with connections from 1/8" to 1"
- ATEX certification (II 2GD o II 3GD) on request

### Construction and working characteristics

1700 air treatment series includes a wide range of elements for individual use or modular assembling. Available in 4 sizes e connections from 1/8" to 1".

The bowls are made in zinc alloy body with zinc alloy integrated connections, technopolymer with integrated metal connections for size 1 and aluminium with integrated aluminium connections for sizes 2, 3 and 4.

The bowls are in Nylon, with technopolymer protection for sizes 1, 2, 3 (also available for size 1 without protection). The bowls are in metal with condensation drain display for size 4.

Filters can be equipped with manual or semiautomatic condensation drain; furthermore it's possible to install the automatic draining device inside the bowl.

Wall mounting by means of screws directly through the body and hidden by protective covers.

The pressure regulator handle is lockable in the desired position, the shut-off valves are lockable with a maximum of three pad-locks to prevent accidents or damages due to unauthorized operation.

The lubricator oil flow is adjustable with proper handle and it is visibly checked through the sight dome.

The progressive start-up valve, pneumatically or electropneumatically controlled, allows air supply to the circuit progressively and with adjustable time. The accessories like panel mounted brackets, pressure gauges with different scales and diameters and the air intake blocks are completing the range. They are assembled between the elements to get filtered or filtered non-lubricated air in the system.

### Instruction for installation and operation

Pay attention to install a group or a single component with air flow direction according to the arrows and to the following sequence: filter, pressure regulator, lubricator and with bowls downwards. The group can be fixed to the wall by removing the covers, which can be installed again after fixing for covering the screws. Do not exceed the recommended torque while assembling the connectors.

Do not exceed the recommended air pressure and temperature limits. The moisture should not exceed the level marked on the bowl and it can be drawn off and carried by a flexible tube of Ø 6/4 directly connected to the discharge valve handle.

The pressure should be set from minimum to maximum, rotating the adjusting handle clockwise.

As lubricant, we suggest to use oil class FD22 or HG32. Verify that the lubricator is not fed with a flow lower than the minimum operational.

To set the oil flow rotate the proper adjusting handle in order to get one drop of oil every 300-600 liters of air.

The oil flow will be kept automatically and proportionally to the air flow. The oil can be refilled by mean of proper plug or directly into the bowl after having de-pressurized the system. Do not exceed the maximum level indicated on the bowl. For opening the shut-off valve push and rotate clockwise the operating handle. For closing it and consequently discharging the down stream line, rotate the handle counter-clockwise.

### Maintenance

Clean the bowls with water and detergent. Do not use alcohol.

The filter element made with HPDE is reusable by blowing and cleaning it with proper detergent. For replacing or cleaning it, remove the bowl and unscrew the baffle spins.

Replace the pressure regulator diaphragm whenever the operation is not correct or there is a continuous air leaking through the relieving (over pressure discharge); reinstall the adjusting mechanism support, locking it with about 8 Nm torque. In case it is necessary to replace the lubricator transparent dome, tight it at 5 Nm torque maximum.

Filters

- ▶ Double filter action: air flow centrifugation and filter element
- ▶ Available in 4 sizes with flow rates up to 10000 NI/min and connections from 1/8" to 1"
- ▶ Filtering cartridge made of HDPE available in three different filtration grades (5µm, 20µm, 50µm)
- ▶ Filter cartridge can be regenerated by washing / blowing it or replaced
- ▶ Bowls screwed to the body (Size 1)
- ▶ Bowl assembly via bayonet type quick coupling mechanism with safety button (Size 2 - Size 3 - Size 4)
- ▶ Semi-automatic or automatic condensation drain
- ▶ Atex certification (II 2GD o II 3GD) on request

**Note**

In order to ensure that any fluid discharged by the auto drain assembly is adequately drained away, it is recommended you to use a 6mm fitting and tube

AIR TREATMENT

► Coalescing filters

- ▶ Coalescing filter
- ▶ Available in 4 sizes with flow rates up to 3000 NI/min and connections from 1/8" to 1"
- ▶ Filtering cartridge with filtration grade of 0,01  $\mu\text{m}$
- ▶ Filtering performances 99.97% (particles up to 0.01  $\mu\text{m}$ )
- ▶ Bowls screwed to the body (Size 1)
- ▶ Bowl assembly via bayonet type quick coupling mechanism with safety button (Size 2 - Size 3 - Size 4)
- ▶ Semi-automatic or automatic drain
- ▶ Atex certification (II 2GD o II 3GD) on request

**Note**

In order to ensure the high level of filtration, it is recommended that a 5 $\mu$  filter is installed before the coalescing filter. In order to ensure that any fluid discharged by the auto drain assembly is adequately drained away, it is recommended you use a 6mm fitting and tube.

2  
AIR TREATMENT

Filter regulators

- ▶ Filter - diaphragm pressure regulator with relieving
- ▶ Available in 3 sizes with flow rates up to 3500 NI/min and connections from 1/8" to 3/4"
- ▶ Low hysteresis rolling diaphragm and balanced spool
- ▶ Filtering element made of HDPE available in 3 different filtration grades (5µm, 20µm and 50µm)
- ▶ Bowls screwed to the body (Size 1)
- ▶ Bowl assembly via bayonet type quick coupling mechanism with safety button (Size 2 - Size 3)
- ▶ Semi-automatic or automatic drain
- ▶ Available in four pressure ranges up to 12 bar
- ▶ Fitted with panel mounting locking ring
- ▶ Atex certification (II 2GD o II 3GD) on request

**Note**

For installations where a more accurate and constant pressure is required, the unit should be installed as close as possible to the point of use. In order to ensure that any fluid discharged by the auto drain assembly is adequately drained away, it is recommended you to use a 6mm fitting and tube.

AIR TREATMENT

Regulators

- ▶ Diaphragm pressure regulator with relieving
- ▶ Available in 4 sizes with flow rates up to 8000 NI/min and connections from 1/8" to 1"
- ▶ Low hysteresis rolling diaphragm and balanced spool
- ▶ Available in four pressure ranges up to 12 bar
- ▶ Fitted with panel mounting locking ring
- ▶ High flow rate of the discharge valve for the downstream overpressure (Size 4)
- ▶ Atex certification (II 2GD o II 3GD) on request

**Note**

For installations where a more accurate and constant pressure is required, the unit should be installed as close as possible to the point of use.

► Pressure regulators for manifold

- ▶ Diaphragm pressure regulator with relieving.
- ▶ Available with 2 front outputs connections G1/8"
- ▶ Available in four pressure ranges up to 12 bar
- ▶ Ring nut for panel mounting
- ▶ Available with integrated pressure gauge on the top of adjusting knob
- ▶ Air supply can be applied by both directions (Right or Left)
- ▶ Max. 6 off pressure regulators in manifold configuration
- ▶ Atex certification (II 2GD) on request

**Note**

For installations where a more accurate and constant pressure is required, the unit should be installed as close as possible to the point of use.

Size 1 pressure regulators for manifold, Zinc alloy body, G1/8" connections, 0 - 12 bar, without pressure gauge, Lockable version

**Dimensions**

Size 1

**Characteristic curves**

Size 1

Size 1

▶ Manifold pressure regulators

- ▶ Manifold pressure regulators
- ▶ Available in four pressure ranges up to 12 bar
- ▶ Inlet pressure common for the whole manifold of pressure regulator
- ▶ A maximum of 6 pressure regulators can be mounted
- ▶ Atex certification (II 2GD) on request

Shut-off valve Size 3, Aluminium body, G1/2" connections, with not lockable handle

Dimensions

**Electric shut-off valve**

- ▶ 3/2 N.C. poppet valve for entering and exhausting the circuit
- ▶ It allows to pneumatically supply the part of the system downstream of the valve
- ▶ Opening and closing of the valve via solenoid operator
- ▶ The supply pressure must be minimum 2 bars or higher
- ▶ It is possible to produce the external supplied solenoid version by mounting the 305.10.05 between the valve main body and the solenoid pilot valve.
- ▶ The air supply can only be done via port 1
- ▶ Ensure that the downstream air consumption will not cause a pressure drop which could result in the pressure falling below the minimum operating values.
- ▶ If the pressure inside the valve falls below 2 bars , the valve might shut off.
- ▶ Atex certification (II 2GD o II 3GD) on request

Example: 17330.M2

Electric shut-off valve Size 3, Aluminium body, G1/2" connections, electric with M2

Dimensions

**Pneumatic shut-off valve**

- ▶ 3/2 N.C. poppet valve for entering and exhausting the circuit
- ▶ It allows to pneumatically supply the part of the system downstream of the valve
- ▶ Opening and closing of the valve via pneumatic operator
- ▶ The piloting pressure must be minimum 2 bar or higher
- ▶ The air supply can only be done via port 1
- ▶ Ensure that the downstream air consumption will not cause a pressure drop which could result in the pressure falling below the minimum operating values
- ▶ If the pressure inside the valve falls below 2 bars , the valve might shut off
- ▶ Atex certification (II 2GD o II 3GD) on request

AIR TREATMENT

**Progressive start-up valve**

- ▶ 3 way valve with double poppet
- ▶ Aluminium body
- ▶ Possibility to adjust the down stream circuit filling time by the enclosed adjustable metering screw
- ▶ Quick down stream circuit discharge
- ▶ Possibility for a pneumatic or electric piloting control
- ▶ Atex certification (II 2GD o II 3GD) on request

AIR TREATMENT

► **Pressure Switch complete with adapter**

- The pressure switch can be set at desired pressure from 2 to 10 bar with electrical connection applied
- The electrical connection is made by mean of a 15 mm connector DIN 43650 type C
- The microswitch contact could be Normally Closed or open (change over switch)

**Filter pressure regulator + Lubricator**

- ▶ Filter - diaphragm pressure regulator with relieving
- ▶ Low hysteresis rolling diaphragm and balanced spool
- ▶ Filtering element made of HDPE available in 3 different filtration grades (5µm, 20µm, 50µm)
- ▶ Semi-automatic or automatic drain
- ▶ Available in four pressure ranges up to 12 bar
- ▶ Oil mist lubricator
- ▶ Variable orifice size in function of the flow rate
- ▶ Oil quantity regulation mechanism and oil quantity visualization dome made of polycarbonate (PC)
- ▶ Oil refill plug
- ▶ Available with low level electrical sensor NO and NC
- ▶ Bowls screwed to the body (Size 1)
- ▶ Bowl assembly via bayonet type quick coupling mechanism with safety button (Size 2 - Size 3)
- ▶ Atex certification (II 2GD o II 3GD) on request

AIR TREATMENT

**Filter + Pressure regulator + Lubricator**

- ▶ Double filter action: air flow centrifugation and filter element
- ▶ Filtering cartridge made of HDPE available in three different filtration grades (5µm, 20µm, 50µm)
- ▶ Filter cartridge can be regenerated by washing / blowing it or replaced
- ▶ Semi-automatic or automatic drain
- ▶ Diaphragm pressure regulator with relieving
- ▶ Low hysteresis rolling diaphragm and balanced spool
- ▶ Available in four pressure ranges up to 12 bar
- ▶ Oil mist lubricator
- ▶ Variable orifice size in function of the flow rate
- ▶ Oil quantity regulation mechanism and oil quantity visualization dome made of polycarbonate (PC)
- ▶ Oil refill plug
- ▶ Available with low level electrical sensor NO and NC
- ▶ Bowls screwed to the body (Size 1)
- ▶ Bowl assembly via bayonet type quick coupling mechanism with safety button (Size 2 - Size 3 - Size 4)
- ▶ Atex certification (II 2GD o II 3GD) on request

Characteristic curves

**High sensitive air pressure regulators with high flow rate relieving**

- ▶ Accurate capacity to maintain set pressure
- ▶ Sensitivity combined with high relieving rates
- ▶ High flow rate with extremely low pressure drop
- ▶ Pressure adjusting lockable handle by simply pressing it downwards in the desired position
- ▶ Aluminium body
- ▶ Ring nut for panel mounting
- ▶ Construction with controlled refuel
- ▶ Atex certification (II 2GD) on request

### Accessories and fixing

The regulator can be mounted by means of a bracket. To enable fixing, unscrew the two screws indicated and screw them back with the bracket mounted. It is advisable to apply soft thread-locker to the screws before screwing them back in.

## Series 1700 Steel line

- Wide working temperature range
- Available in 3 sizes with connections from 1/4" to 1"
- ATEX certification (II 2G or II 2D), SIL, EAC
- Clean profile versions available

The stainless steel SS1700 air treatment series has been engineered and developed to approach specifically the OIL & GAS industry and more widely for all the severe service applications that require excellent corrosion resistance due to chemical and/or harsh environmental condition.

**All external and internal parts (except for the automatic drain version) are AISI 316L stainless steel material in compliance with NACE standard MR0175/ISO 15156/1.** The product range includes FILTER, with filtration elements up to 3 filtration degree ( $5\mu\text{m}$ - $20\mu\text{m}$ - $50\mu\text{m}$ ), available in AISI316 stainless steel or HDPE (high density polyethylene), and manual or automatic condensed exhaust; The PRESSURE REGULATOR is supplied with low hysteresis rolling diaphragm and an over-pressure exhaust valve (RELIEVING), available in 4 different adjustment ranges from 0 to 12 bar. As a last the FILTER REGULATOR range, which combines the features of a filter and pressure regulator into a one single device. "CLEAN PROFILE" version is available for all the sizes, featuring a glossy finish on the external surface. The over-pressure exhaust hole (RELIEVING) has a 1/8" NPT threading, and it is protected by an AISI 316 sintered filter series. Note: for CLEAN PROFILE series this is a simple unthread hole.

### Instructions for installation and use

Product shall be installed reducing the distance from inlet point. Check and install the device following the flow direction (clearly marked with an arrow stamped on the body). Vertical position installation with condensed exhaust tap pointing downward is recommended.

Devices must be used in compliance with pressure and temperature operating range. To set the pressure there is an adjustable knob, located on the top of the device. Pneumax recommend selection of pressure regulator adjusting range option in line with client required performance. The condensed exhaust action for the manual drain version shall be performed only in the absence of pressure. To discharge liquid, turn the tap clockwise until the discharge of liquid is triggered, then tighten it all the way.

**Maintenance**

Filtration elements and filter regulator are reusable through blowing and/or washing and is made of stainless steel or HDPE (high density polyethylene). To replace, remove the cup, loosen the set screw of the support and replace the filter element with a new one or refurbished one. Replace the regulator diaphragm whenever the performance is compromised or if there is a continuous discharge from the relieving hole (over-pressure exhaust). Fully discharge the adjustment spring before removing the adjustment mechanism. For other maintenance activities, due to complexity of assembly and requirement for dedicated **PNEUMAX** testing activities, it is strongly recommended to contact the manufacturer.

**Certifications available**

Filter

- ▶ Body, bowl and internal components in AISI 316L stainless steel
- ▶ A4 (AISI 316) stainless steel fixing screws
- ▶ Manual or automatic drain
- ▶ ATEX certification (II 2G or II 2D), SIL, EAC
- ▶ Filter cartridge available in AISI 316 stainless steel or HDPE
- ▶ Clean profile versions available
- ▶ Versions with 1/8" NPT pressure gauge connection available

Regulators

- ▶ Pressure regulator diaphragm with over-pressure drain (Relieving)
- ▶ Body, adjustment mechanism, back plate and caseback internal components in AISI 316L stainless steel
- ▶ AISI 316 stainless steel adjustment springs
- ▶ Fixing screws, adjustment screw and locking nut in inox A4 (AISI 316)
- ▶ Clean profile versions available
- ▶ Low hysteresis rolling diaphragm
- ▶ Balanced system
- ▶ ATEX certification (II 2G or II 2D), SIL, EAC

**Note**

The pressure must be always regulating while increasing. For a more precise regulation and higher sensibility, the use of a regulator with a pressure range as close as possible to the regulated pressure is recommended.

**Series 1700 - Electronic proportional regulators - Size 0 - 1 - 3**

Modern industrial applications require increasingly high performances from their pneumatic components. For example, the speed and thrust of a pneumatic actuator may need to be varied. These parameters often need to be modified dynamically while an operation is running.

This solution can be achieved by means of a regulator that can vary pressure over time.

Pneumax portfolio includes 1700 Series electronic proportional regulator, available in three different sizes with flow rates of 7, 1100, and 4000 NI/min respectively and supporting Analog/Digital, CANopen® or IO-Link communication interfaces.

**Application fields**

Typical applications will include the necessity to dynamically control the force of the actuator, be it thrust or torque.

Examples include: Closing systems, painting systems, tensioning systems, packaging systems, pneumatic braking systems, force control for welding grippers, thickness compensation systems, balancing systems, laser cutting, pressure transducers for the control of modulating valves, test benches for system testing, force control for buffers on polishers, etc.

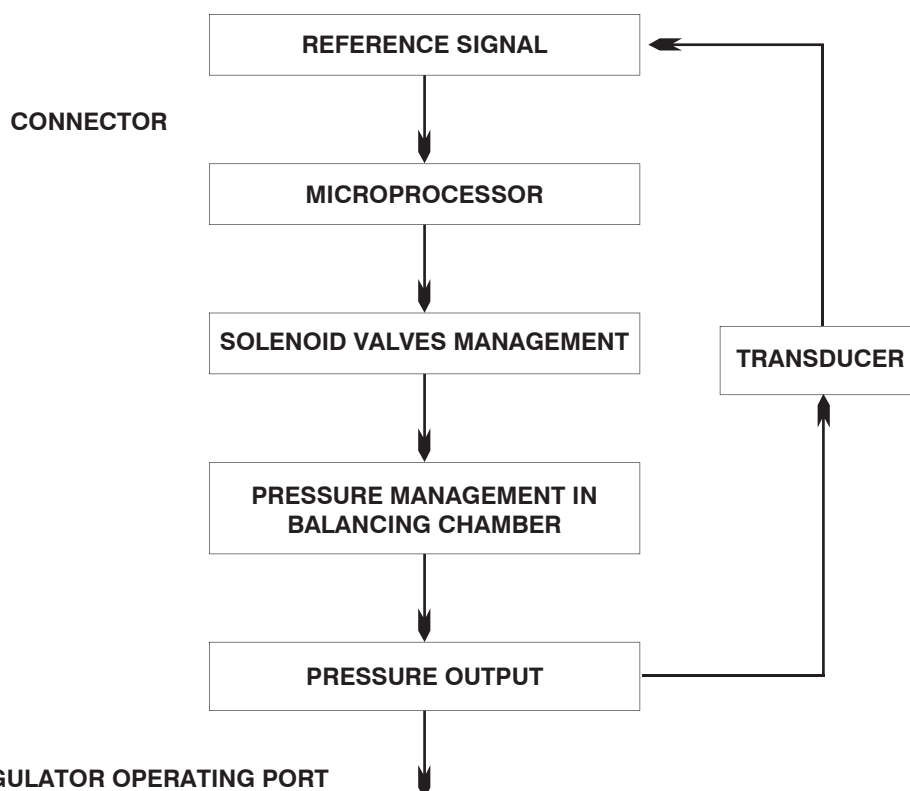

**Product presentation**

The supply and exhaust connections are on one side of the regulator and the working port is on the opposite side. The two remaining sides carry G 1/8" ports that are blanked off with removable plugs, these can be used to connect a pressure gauge or as an outlet port. If you order the version with the external feedback there is a M5 threaded connection to which connect the feedback pressure (to the pressure transducer). This connection is placed on the outlet connection side. This option allows to take the signal from a remote point instead of directly from the outlet connection; this function is typically used when the regulated pressure is used far away from the regulator. The control solenoid valves, the pressure sensor, and the management electronics are placed in upper part of the regulator. The electronic management system is the same for all the size 0, size 1 and size 3 regulators.

**CLOSED LOOP diagram (internal control circuit)**

The proportional regulator is known as a CLOSED LOOP regulator because a pressure transducer in the circuit transmits a continuous analog signal to the microprocessor, which compares the reference value and supplies the control solenoid valves accordingly.

## Installation/Operation

### PNEUMATIC CONNECTION

The compressed air is connected by means of M5 threaded holes (for size 0 regulators), G 1/4" threaded holes (for size 1 regulators) and G 1/2" threaded holes (for size 3 regulators) on the body.

Before making the connections, eliminate any impurities in the connecting pipes to prevent chippings or dust entering the unit. Do not supply the circuit with more than 10 bar pressure and make sure that the compressed air is dried (excessive condensate could cause the appliance to malfunction) and filtered at 5 micron. The supply pressure to the regulator must always be at least 1 bar greater than the desired outlet pressure.

If a silencer is applied to the discharge path the unit response time may change; periodically check that the silencer is not blocked and replace it if necessary.

### ELECTRICAL CONNECTION

For the electrical connection a SUB-D 15-pole female or a M12 connector is used (accordingly to the model, to be ordered separately). Wire in accordance with the wiring diagram shown below.

**Warning: INCORRECT CONNECTIONS MAY DAMAGE THE DEVICE**

### NOTES ON OPERATION

If the electric supply is interrupted, the outlet pressure is maintained at the set value. However, maintaining the exact value cannot be ensured as it is impossible to operate the solenoid valves.

In order to discharge the circuit downstream, zero the reference, make sure that the display shows a pressure value equal to zero and then disconnect the electric power supply.

A version of the device is available that exhausts the downstream circuit when the power supply is removed. (Option "A" at the end of the ordering code).

If the compressed-air supply is suspended and the electric power supply is maintained a whirring will be heard that is due to the solenoid valves; an operating parameter can be activated (P18) that triggers the regulator protection whenever the requested pressure is not reached within 4 seconds of the reference signal being sent. In this case the system will intervene to interrupt the control of the solenoid valves. Every twenty seconds, the unit will start the reset procedure until standard operating conditions have been restored.

## Series 1700 - Miniaturised proportional pressure regulator - Size 0 - 1 - 3

Modern industrial applications constantly require more sophisticated and better performing pneumatic components. Flexibility and adaptability are key factor when designing a machine. The possibility to change the application parameter during operation such as for example the speed of a cylinder or the force generated by a rotary actuator are beneficial to the designer.

In the past it was necessary to design complicated pneumatic circuits based on pneumatic logic elements which required a lot of space and complicated set up, today, thanks to the electronic proportional regulators such operations are extremely easy to achieve and offer even more flexibility.

Pneumax miniaturized proportional regulators series integrates all the main features of the 521 series with the exclusion of the display and analogue/digital output.

High precision in pressure regulation, fast response speed, assembling options and reduced dimensions are the main advantages.

2  
AIR TREATMENT

| Pneumatic characteristics                                |   |
|--|---|
| Fluid  | Air filtered at 5 micron and dehumidified |
| Minimum inlet pressure                                   | Desired outlet pressure + 1 bar           |
| Maximum inlet pressure                                   | 10 bar                                    |
| Outlet pressure  | Ordering code                             |
|  | Pressure value                            |
| Nominal flowrate from 1 to 2 (6 bar $\Delta p$ 1 bar)    | 0 ... 9 bar                               |
| Discharge flowrate<br>(at 6 bar with 1 bar overpressure) | 7 NI /min                                 |
| Air consumption  | 7 NI /min                                 |
| Operating connection                                     | M5 / Ø4                                   |
| Exhaust connection                                       | M5 / Ø4                                   |
| Maximum fitting tightening                               | 3 Nm                                      |

| Electrical characteristics                  |  |
|---|--|
| Supply voltage                              | 24VDC $\pm$ 10% (stabilised with ripple <1%) |
| Standby current consumption                 | 55 mA  |
| Current consumption with solenoid valves on | 145 mA                                       |
| Reference signal                            | Voltage*                                     |

\* Request during ordering process

### PARAMETER 18 - Protection mode

If during operation in "standard" mode the desired pressure cannot be reached (for example, there is no compressed-air supply or it is insufficient) or the discharge conduit is blocked or closed, the regulator continues to work on the solenoid valves to try to reach the desired pressure. This parameter allows the automatic switch-off of the control solenoid valves for up to 20 seconds to be enabled. This function is used to safeguard the solenoid valves over time. The protection is triggered if the desired pressure is not reached and the outlet pressure does not undergo significant variations within a 4-seconds control of the solenoid valves. A significant variation is defined as a variation that is greater than the defined insensitivity value, parameter P1. After the 4 seconds have elapsed in which the regulator attempts to reach the desired pressure, the protection is triggered. This protection switches off the solenoid valves for a maximum of 20 seconds. If the 20 seconds have elapsed or if during the 20 seconds during which the solenoid valves are switched off the required pressure (reference) varies or the outlet pressure varies the regulator will again start to control the solenoid valves for another 4 seconds, trying to reach the desired pressure. If this does not occur, the protection is reactivated. From this point on 4 seconds of controlling the solenoid valves and 20 seconds of switch-off alternate cyclically.

### Coding For Proportional Pressure Regulator Modular Manifold

It is possible to assemble a manifold of Miniature Proportional Regulators to a maximum of 12 Regulators. For the coding of the Manifold, refer to the configuration Table below.

The Regulators are feed by a single supply pressure via the G1/8" connection. In the Manifold, the Pressure Regulators operate independently, the output pressure is supplied via the M5 or 4mm output connection depending on the model requested. The electrical signal is controlled via the M8 connector.

There are also configured single bases up to a maximum of 12 positions with power supplies and independent consumptions (See following pages).

| G     | 1      | 7    | 0             | -         | -            | -                     | M              | -           | -       | -                               | P | - |
|-------|--------|------|---------------|-----------|--------------|-----------------------|----------------|-------------|---------|---------------------------------|---|---|
| Group | Series | Size | Parameter 18  | N. Places | Control Type | Electrical connection | Pressure range | Connection  | Version | Options                         |   |   |

AIR TREATMENT

Series WPR

2 AIR TREATMENT

- Output pressure up to 18 bar
- Flow rate up to 4000NI/min
- There are versions available with or without proportional integration
- Proportional Integrated versions available with Analogue/Digital, CANopen®, IO-Link, EtherCAT®, PROFINET IO RT and EtherNet/IP interface
- IN / OUT connections, main regulator G1/2"
- EXH connection, main regulator G1/4"
- IN connection, pilot regulator M5
- Versions available with external feedback

WPR proportional piloting pressure regulators are designed to be able to provide an output pressure value P2 up to 18 bar and are available with the integrated pilot proportional pressure regulator or with an M5 connection for pneumatic proportional remote piloting. The main regulator and pilot regulator maintain separate supplies, while the main regulator has a maximum inlet pressure of 20 bar the proportional pilot regulator maintains the inlet pressure of 10 bar. The ratio of pilot pressure to outlet pressure is between 1:1 and 1:2 depending on the inlet pressure and pilot pressure. The device is made with G1/2" IN/OUT main connections and provides a nominal flow rate of 4.000 NI/min. The device is available with pneumatic, Analog/Digital, CANopen®, IO-Link, EtherCAT®, PROFINET IO RT and EtherNet/IP interfaces. Proportional management refers only to the low-pressure piloting part. Proportional management refers only to the low-pressure piloting part.

**Product presentation and applications**

WPR proportional regulators (Wide Pressure Range) are ideal for all applications where there is a need to use a low-pressure (0-9 bar) reference signal resulting in a high-pressure (0-18 bar) P2 output. The devices have separate pneumatic supplies for the main regulator and the integrated pilot proportional regulator. The main regulator features G1/2" IN/OUT connections and a G1/4" EXH drain connection. The input connection of the integrated pilot proportional regulator is M5 ported. An external feedback version is available an option that allows the P2 pressure signal to be taken from a remote point rather than directly from the usage connection. This function is usually used when the end user is not near to the devices. At the top is located the management electronics or the connection for remote piloting. The fixing takes place through the use of a special fixing bracket.

**Technical characteristics**

|  |   |
|--|---|
| IN/OUT connections   | G1/2"   |
| EXH connections  | G1/4"   |

\* Selectable by keyboard or by RS-232

\*\* Valid only for devices with analog input

2 AIR TREATMENT

**Installation and operation of the piloting proportional regulator**

**PNEUMATIC CONNECTION**

The compressed air is connected by means of M5 threaded port in the body.  
Ensure the compressed air entering the unit is filtered for both water and dust down to 5 microns.  
Maximum inlet pressure is 10 Bar.  
The supply pressure to the regulator must always be at least 1 bar greater than the required outlet pressure.

**ELECTRICAL CONNECTION**

For the electrical connection a D-SUB 15-pole female connector is used (supplied separately).  
Wire in accordance with the wiring diagram shown below.  
Warning: INCORRECT CONNECTIONS MAY DAMAGE THE DEVICE.

**OPERATING NOTES**

If the electric supply is interrupted, the outlet pressure is maintained at the set value.  
However, maintaining the exact value cannot be ensured as it is impossible to operate the solenoid valves.  
In order to discharge the circuit downstream, zero the reference, make sure that the display shows a pressure value equal to zero and then disconnect the electric power supply.  
A version of the device is available that exhausts the downstream circuit when the power supply is removed. (Option A at the end of the part number).  
If the compressed-air supply is suspended and the electric power supply is maintained a whirring will be heard that is due to the solenoid valves; an operating parameter can be activated (P18) that triggers the regulator protection whenever the requested pressure is not reached within 4 seconds of the reference signal being sent.  
In this case the system will intervene to interrupt the control of the solenoid valves. Every twenty seconds, the unit will start the reset procedure until standard operating conditions have been restored.

## Series 1700

It is not unusual that, during some applications the thrust generated by a pneumatic cylinder is not sufficient for the specific purpose it has been designed for.

In order to get over the problem, the working pressure may be increased to a maximum line pressure which normally is 6 - 7 bar; alternatively the problem is solved by an higher bore cylinder that suits the machine.

Three size pressure boosters, with pressure ratio of 2:1, have been designed to avoid these problems.

This device is utilizing the compressed air of the circuit where it is installed.

### Construction and working characteristics

The working method is based on the pump effect of the four chambers cylinder as shown in fig. 1. Two chambers are alternatively compressing the air in the boost one, while the fourth one is discharging.

By means of an internal circuit, the pressure booster keeps on pumping air till the down stream pressure reaches a value double the inlet pressure. In these circumstances there is a balance condition.

When the down stream pressure decreases, the pressure booster starts again its alternating cycle till a new balance condition is restored.

The pressure booster can be furnished complete with pressure regulator installed on the inlet port for getting an accurate outlet pressure value. A wall mounting plate is also available.

### Instructions for installation and use

Do not exceed the indicated pressure and temperature limits.

It is advisable to install a small air tank after the pressure booster to avoid pressure pulsation effects.

Discharge the down stream circuit before any maintenance operation as the inner circuit of the booster does not allow the down stream line discharge even if the inlet pressure drops down.

### Maintenance

Pressure booster has an average life of about 20 millions of valve cycles, depending on working conditions (every back stroke corresponds to one valve cycles).

A proper lubrication and filtration of air improve the life of pressure booster parts.

It is advisable to protect the exhaust ports in environment.

Replaceable spare seal kits are available.

### How to calculate the required time of pressure booster to increase the air pressure in a tank whose capacity is known.

#### Operating Data

P1 = Inlet pressure

P2' = Tank initial pressure

P2'' = Tank final pressure

V = Tank volume

#### Procedure:

- 1) Calculate the ratio K' between the initial pressure of the tank and the inlet pressure of the booster ( P2' / P1 ).
- 2) Calculate the ratio K'' between the final pressure of the tank and the inlet pressure of the booster ( P2'' / P1 ).
- 3) Locate the intersection point between the ratio K' and the curve on filling time diagram related to the specific booster. Trace a vertical line from the above point and read the correspondent time T' (the example shows the ratio K = 0.8 and correspondent time of about 4.8 seconds).
- 4) Repeat same procedure also for ratio K'' to get time T''.
- 5) Use the following formula

$$T = \frac{V}{5} \cdot (T'' - T')$$

to obtain the total time required to move the pressure P2' to P2'' of tank volume V.

P1 = inlet pressure  
P2 = tank pressure

**Pressure booster Ø40**

Coding: 1740.50N

**Flow rate characteristics**

P1 = inlet pressure (bar)

**Filling curve**

P1 = inlet pressure (bar) P2 = tank pressure (bar)

**Construction characteristics**

- Self operating pressure booster with pressure ratio of 2:1.
- Automatic functioning: to operate the booster just connect it to compressed air line.
- Body made with light alloy.
- Barrel made of extruded and anodized aluminium.
- Downstream circuit pressure is kept under pressure even in absence of inlet pressure.

**Technical characteristics**

Pressure booster Ø63 complete with pressure regulator

Coding: 1763.80NR

Flow rate characteristics

P1 = inlet pressure (bar)

Filling curve

P1 = inlet pressure (bar) P2 = tank pressure (bar)

Construction characteristics

- Self operating pressure booster with pressure ratio of 2:1.
- Automatic functioning: to operate the booster just connect it to compressed air line.
- Body made with light alloy. - Barrel made of extruded and anodized aluminium.
- Downstream circuit pressure is kept under pressure even in absence of inlet pressure.
- Regulation of the inlet pressure (and as a consequence regulation of the outlet pressure).

Technical characteristics

|                            |             |

## Series P+

In some cases the force generated by a pneumatic actuator is not sufficient to carry out its required function. To overcome this problem it is then necessary, where possible, to either increase the working pressure or use a larger bore actuator providing it will fit within the structure of the machine.

If you cannot fit a larger actuator, the solution is to use a pressure booster to increase the air pressure to that portion of the pneumatic circuit. The booster operates using the same compressed air used by the pneumatic system and does not require an external power supply. It is easy to install and can increase the working pressure in any part of the system where ever its needed, maintaining the normal working pressure in the rest of the system.

The new pressure booster **P+** is lightweight with a new compact and linear design.

**P+** has an integrated pressure regulator that adjusts the setting of the output pressure P2 which is also fitted with a pressure relief valve.

The design of the internal circuit provides high flow rates and fast filling times whilst the two G1/8" manometer connections built into the body of the booster allow monitoring of the input and output pressures.

### Operation

The operating principle of the device is based on a four chamber pump in which with a reciprocating movement, two chambers compress the air in the compression chamber whilst the fourth chamber is in the discharge phase.

The incoming air passes through the non-return valves and supplies the compression chambers "A" and "B" at the same time.

Meanwhile the integrated pressure regulator, via the switching valve, feeds the thrust chamber "C", discharging chamber "D".

The movement of the piston, with the thrust of chamber "C", compresses the air in the multiplication chamber "B", which is pushed through the output Non return valve and then onto the OUT connection.

When the piston reaches the end of stroke the switching valve feeds chamber "D" putting chamber "C" into the discharge position thus reversing the motion of the piston.

The previous process compressing the air in compression chamber "A", pushing it through the non-return valve and out through the outlet connection.

The oscillating motion of the piston allows the pressure booster to pump intensified air into the downstream circuit until the chambers reach a state of equilibrium; this in turn stops the booster.

When the downstream pressure decays the booster restarts oscillating until the state of equilibrium is re-established

### Pneumatic Circuit

The **P+** pressure booster, is certified by ATEX:

**CE II 3GD c T6 T85°C X 5°C ≤ Ta ≤ 50°C.**

## General Warning

It is recommended you follow the instructions below in order to prevent personal injury or damage to the booster.

- The pressure booster is supplied as standard with the regulating spring completely unwound. In this condition it is possible to detect a leak of air from below the regulating knob or through the exhaust port. This condition is standard for the unit. When the spring is completely unwound the downstream pressure and the inlet pressure are the same. In order to increase the downstream pressure it is necessary to operate the regulation knob increasing the spring compression.
- Please apply the necessary safety measures to ensure that the booster only operates within the specified pressure range. Exceeding the maximum output pressure is dangerous.
- The booster is fitted with a non-return valve on the output which prevents discharge of the downstream pressure. It is recommended that a 3/2 valve be installed in the OUT connection if it is necessary to rapidly discharge the downstream pressure.
- When the booster is not in use it is recommended that the inlet pressure is removed to let the booster stop, thus avoiding unexpected operation or malfunction.
- If there is not downstream air consumption it is possible to register a leak through the exhaust port of the unit. This condition is normal and is the consequence of the internal design aimed at discharging any pressure building up in the unit in the rest condition.

## Use and maintenance

The pressure booster must always be used in accordance with the operating parameters and instruction.

Any improper use may cause injury or malfunction.

The pressure booster is not an alternative to a compressor because continuous uninterrupted operation will greatly reduce the life of the unit.

- The operating life of the device depends mainly on the operational duty cycle. Prolonged uninterrupted use without pause may reduce the operating life of the booster.
- Ensure the unit is supplied with a suitable compressed air supply, please note: appropriate filtration and lubrication may help to increase the durability of the product.
- **The input flow value must be equal or greater than double the output flow value ( $Q1/Q2 > 2$ ). Ensure that the value of the output pressure is at least 1bar higher than the input pressure ( $P2 > P1 + 1$ ).**
- To avoid pulsation of the output pressure during operation, it is recommended that an accumulation tank (reservoir) is installed in the downstream circuit.
- To avoid pulsation of the output pressure during operation, it is recommended that an accumulation tank (reservoir) is installed in the downstream circuit.
- To reduce the noise generated by the unit, install silencers into the exhaust ports.
- Pressure booster has an average life of about 20 millions of valve cycles, depending on working conditions (every back stroke corresponds to one valve cycle).

## Pressure regulation

The booster is fitted with an internal pressure regulator which allows regulation of the output pressure P2 and is also fitted with pressure relief valve. For correct operation of the booster, please consider the following instructions:

- Air leaking from under the adjusting knob when the spring is decompressed is not a defect but a sign that the device is working correctly.
- In order to increase the regulated pressure, pull the knob upwards to unlock, then rotate the knob in the direction indicated by the arrow (+).
- The rotation of the knob has an upper and lower block beyond which the knob is damaged.
- To lock the knob after the adjustment has been made, push the knob downwards until it detents in the locked position.
- To reduce the output pressure, pull the knob upwards, rotate the knob indicated by the arrow (-), the built in pressure relief valve will discharge the excess pressure from under the adjusting knob.
- Always regulate the rising pressure.

## Method of calculation of the time necessary to increase the pressure in a tank of a given volume using a pressure booster.

DATA:

P1 = Inlet pressure

P2' = Tank initial pressure

P2" = Final tank pressure

V = Tank volume

**Procedure**

- 1) Calculate the K' ratio between the initial tank pressure and the inlet booster pressure (P2'/ P1).
- 2) Calculate the K'' ratio between the final tank pressure and the inlet booster pressure (P2''/ P1).
- 3) Locate, on the chart illustrating, the booster filling time, the intersection point between the K' ratio and the curve, then trace a vertical line from the intersection point to the vertical axis and read the correspondent value T' (in the example chart, to a ratio of 0.8 corresponds a time value of about 3.6 seconds).
- 4) Repeat the operation for the K'' ratio, obtaining the T'' time.
- 5) Use the following formula

$$T = \frac{V}{5} \cdot (T'' - T')$$

to obtain the total time needed to take the tank of volume V from the pressure value P2' to the pressure value P2''.

Example of calculation of the necessary time to take a 10L tank from the pressure value P2' to the value P2''

$$K' = 0,8 \quad T' = 3,6 \text{ sec.} \quad V = 5L.$$

$$K'' = 1,5 \quad T'' = 12 \text{ sec.}$$

$$T = \frac{5}{5} \cdot (12 - 3,6) = 8,4 \text{ sec.}$$

**Transport and Installation**

The installation and implementation of the device must be done by skilled personnel. Respecting the safety requirements specified in the **UNI norm UNI EN 983-97 Machinery Safety – Safety Requirements concerning oleo-hydraulic and pneumatic systems** and their components. The following instructions are essential for a correct installation:

- Do not use the green knob to lift and transport the device, because it could rip off causing injuries or damaging objects.
- Install the booster by fixing it through the threaded M4 holes on the body of the machine or using the special accessories (see the “Accessories” chapter).

#### Hydro-pneumatic speed control cylinders according to standard ISO 15552

ISO 15552 hydro-pneumatic speed control cylinders with internal hydraulic circuit for movement control

|   |                                       |             |
|---|---------------------------------------|-------------|
|  | <b>Series 1450 - 1463 - Ø50 - Ø63</b> | <b>3.86</b> |
|---|---------------------------------------|-------------|

## Compact cylinders according to standard ISO 21287

Compact cylinders according to standard ISO with integrated slots suitable for sensors mounting without adaptors. Bores from Ø20 to Ø100 mm. Versions with end stroke adjustable pneumatic cushioning are also available according to ISO 21287

|   |                             |             |
|---|-----------------------------|-------------|
|  | <b>Series 1500 Ecompact</b> | <b>3.92</b> |
|---|-----------------------------|-------------|

## Cylinders with piston rod not according to standard

### Threaded body microbore cylinders

Special performance microbore cylinders with hexagonal or round bodied and either completely threaded or threaded with a plain rod ending

|   |  |              |
|---|--|--------------|
|  | <b>Series 1200<br/>Special performance<br/>microbore cylinders</b> | <b>3.108</b> |
|---|--|--------------|

### Profile tube cylinders, non rotating

Non rotating profile tube cylinders twin rod version, available with bores from Ø32 to Ø100 mm, and strokes up to 500 mm

|   |  |              |
|---|--|--------------|
|  | <b>Series 1325-1326-1345-1347<br/>Twin rod cylinders</b> | <b>3.110</b> |
|---|--|--------------|

### Flat profile cylinders

ECOFLAT cylinders available with sizes from Ø25 to Ø63 mm and strokes up to 300 mm. Profiled tube has two "T" slots on the side hosting sensors 1580.\_, MRS.\_, MHS.\_, without adaptors. Two additional connections are also available on rear cover for cylinder feeding

|   |                       |              |
|---|-----------------------|--------------|
|  | <b>Series ECOFLAT</b> | <b>3.115</b> |
|---|-----------------------|--------------|

### Hydraulic speed control cylinders

Hydraulic speed control cylinders with outward, inward and outward/inward control, with lateral or in-line tank. Available with SKIP valve (accelerating device) and blocking valve (STOP).

|   |                                |              |
|---|--------------------------------|--------------|
|  | <b>Series 1400 - Ø40 - Ø63</b> | <b>3.121</b> |
|---|--------------------------------|--------------|

### Compact cylinders

Short stroke and compact cylinders with bores from Ø20 to Ø100 mm, available in single and double acting versions, tandem and through rod with magnetic piston versions. The Europe versions are mainly compliant with the ISO or UNITOP standard (depending on bores), while the Ecompact-S versions have connections and rods according to the ISO 15552 standard

|   |   |              |
|---|---|--------------|
|  | <b>Series 1500 - Short stroke cylinders</b> | <b>3.132</b> |
|---|---|--------------|

|  |                               |              |
|--|-------------------------------|--------------|
|  | <b>Series 1500 Ecompact-S</b> | <b>3.147</b> |
|--|-------------------------------|--------------|

|   |                           |              |
|---|---------------------------|--------------|
|  | <b>Series 1500 Europe</b> | <b>3.139</b> |
|---|---------------------------|--------------|

## Cylinders with piston rod not according to standard (following)

### Multimount cylinders

Multimount cylinders available with bores from Ø10 to Ø25 mm, with strokes up to 50 mm and with magnetic piston versions

|   |                    |              |
|---|--------------------|--------------|
|  | <b>Series 6500</b> | <b>3.152</b> |
|---|--------------------|--------------|

### Guided compact cylinders

These cylinders are available in sizes Ø12 to Ø80 mm, and comprise a single compact cylinder with integral guide rods, the rod guide is available in two styles: self-lubricating bronze bushes and bearing bushes

|   |                              |              |
|---|------------------------------|--------------|
|  | <b>Series 6100-6101-6110</b> | <b>3.154</b> |
|---|------------------------------|--------------|

### Slide cylinders

Slide cylinders manufactured with bores from Ø8 to Ø25 mm, with strokes up to 150 mm. Available with simple and double regulation end stroke and also with front and rear shock absorber

|  |                    |              |
|--|--------------------|--------------|
|  | <b>Series 6600</b> | <b>3.168</b> |
|--|--------------------|--------------|

### Slide units

Twin-rod linear guide units with bores from Ø10 to Ø32 mm, and with control unit with bronze bush versions, with control unit with bearing bush versions. Are also available the through twin-rod slide units and the compact slide units

|   |   |              |
|---|---|--------------|
|  | <b>Series 6200 - Twin-rod slide units</b> | <b>3.179</b> |
|---|---|--------------|

|   |   |              |
|---|---|--------------|
|  | <b>Series 6210<br/>Through twin-rod slide units</b> | <b>3.183</b> |
|---|---|--------------|

|  |                    |              |
|--|--------------------|--------------|
|  | <b>Series 6700</b> | <b>3.188</b> |
|--|--------------------|--------------|

## Rodless cylinders

### Rodless cylinders - Standard

Rodless cylinders with bore from Ø16 to Ø63 mm, and strokes up to 6000 mm, available also with linear control unit

|   |                    |              |
|---|--------------------|--------------|
|  | <b>Series 1605</b> | <b>3.195</b> |
|---|--------------------|--------------|

|  |                        |              |
|--|------------------------|--------------|
|  | <b>Series 1605 Ø16</b> | <b>3.206</b> |
|--|------------------------|--------------|

## Rotary actuators

### Rack rotary actuators

Double or single rack & pinion rotary actuators

|   |   |              |
|---|---|--------------|
|  | <b>Series 1330 - 1331 - 1332 - 1333, rotary actuators</b>         | <b>3.211</b> |
|  | <b>Series 6400 - Double rack rotary actuators with turn table</b> | <b>3.215</b> |

### Vane type rotary actuators

Vane type rotary actuators with the shaft that runs into ball bearings, available with sizes from Ø10 to Ø100 mm

|   |                    |              |
|---|--------------------|--------------|
|  | <b>Series 6420</b> | <b>3.221</b> |
|---|--------------------|--------------|

## Handling

### Pneumatic grippers

Pneumatic grippers manufactured with 2 angular fingers (from -10° to +30°), wide opening 180°, or 3 finger parallel style. Swing clamp cylinders has been developed to meet the need to clamp a workpiece by means of a clamping arm.

## Accessories and fixing devices

### Piston rod lock

Piston rod lock for cylinders with bores from da Ø12 to Ø125 mm

|   |                           |              |
|---|---------------------------|--------------|
|  | <b>Series 1260 - 1320</b> | <b>3.279</b> |
|---|---------------------------|--------------|

### Linear guiding units

Linear guiding units series 1200 (Ø20-25 mm) and series 1320 (from Ø32 to Ø80 mm)

|  |                           |              |
|--|---------------------------|--------------|
|  | <b>Series 1260 - 1320</b> | <b>3.281</b> |
|--|---------------------------|--------------|

### Shock absorbers

Shock absorbers with M8x1-M10x1-M14x1,5-M20x1,5-M27x1,5 threads

|   |                    |              |

|                       | mm  | 15 | 18 | 18 | 18 | 22 | 22 |

### Operational characteristics

|                       |  |  |  |  |  |  |  |
|-----------------------|--|--|--|--|--|--|--|
| Fluid                 | filtered air, preferably lubricated  |  |  |  |  |  |  |
| Max. working pressure | 10 bar   |  |  |  |  |  |  |
| Working temperature   | -5°C ... +70°C with standard seals magnetic or non magnetic piston<br>-5°C ... +80°C with FPM seals magnetic piston<br>-5°C ... +80°C with HNBR seals magnetic piston<br>-5°C ... +120°C with HNBR seals non magnetic piston<br>-5°C ... +150°C with FPM seals non magnetic piston |  |  |  |  |  |  |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

### Standard strokes

*Double acting version*

**Ø8 - Ø10:**

15 - 25 - 50 - 75 - 80 - 100 mm

**Ø12 - Ø16:**

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 - 300 mm

**Ø20 - Ø25:**

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 - 300 - 320 - 350 - 400 mm

**Ø32 ... Ø50:**

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 - 300 - 320 - 350 - 400 - 450 - 500 mm

On request are available strokes up to:

**Ø8 - Ø10:** 250 mm

**Ø12 - Ø16:** 700 mm

**Ø20 ... Ø50:** 1000 mm

*Single acting version*

**Ø12 ... Ø50:**

up to stroke 40 mm

On request are available strokes up to 200 mm

### Minimum and maximum springs load for single acting version

| Bore          | Ø12 ... Ø20 | Ø25 | Ø32 | Ø40 - Ø50 |
|---------------|-------------|-----|-----|-----------|
| Min. load (N) | 10          | 10  | 20  | 40        |
| Max. load (N) | 25          | 50  | 55  | 110       |

Basic version

Coding: 12T.Ø.stroke.VG

|   |  |
|---|--|
| T | TYPE   |
|   | 60 = Double acting version   |
|   | 71 = front spring from Ø12 (max stroke 40 mm)<br>72 = rear spring from Ø12 (max stroke 40 mm)            |
| Ø | BORE   |
|   | 8 = Ø8   |
|   | 10 = Ø10<br>...<br>50 = Ø50  |
| V | VERSION  |
|   | A = Adjustable cushioning (from Ø16)   |
|   | M = Magnetic piston (from Ø10)   |
|   | X = Stainless steel rod  |
|   | MA = Cushioning with magnetic piston<br>MAX = Cushioning, magnetic piston and stainless steel piston rod |
| G | SEALS  |
|   | = NBR  |
|   | T = HNBR   |
|   | V = FPM  |

Standard execution, fully complying with ISO standards from ø8 to ø25. Bores 32, 40 and 50 not included in the standard, comply with our own specifications. Can use all available mountings. For single acting type, the maximum stroke is 40 mm., after which overall dimensions increase in length to an extent not proportional to the stroke (and in any case not longer than stroke 100).

Without rear eye version

Coding: 12T.Ø.stroke.VG

|                              | E = version with non-rotating hexagonal rod, non magnetic piston (from Ø12)                   |
|                              | M = Magnetic piston (from Ø10)  |
|                              | X = Stainless steel rod   |
|                              | AE = version with non-rotating hexagonal rod, with cushioning (from Ø16)                      |
|                              | MA = Cushioning with magnetic piston  |
|                              | ME = version with non-rotating hexagonal rod, magnetic piston (from Ø12)                      |
|                              | MAE = version with non-rotating hexagonal rod, with cushioning and magnetic piston (from Ø16) |
|                              | MAX = Cushioning, magnetic piston and stainless steel piston rod                              |
| L = Air inlet at 90° version |   |
| G                            | SEALS   |
|                              | = NBR   |
|                              | T = HNBR  |
|                              | V = FPM   |

Version derived from standard execution 1260 and not included in ISO standard. Not having a rear eye it is shorter and the air inlet is from the rear or at 90° like it is on the front. The considerations made for the basic type 1260 apply for all single-acting types.

Through rod cylinder version

Coding: 1262.Ø.stroke.VG

|   |   |
|---|---|

| G | SEALS   |
|   | = NBR   |
|   | T = HNBR*   |
|   | V = FPM*  |

Execution by rod coming out from both end caps, with overall dimensions. except for the rod, equal to 1260 version. Not available with Ø8 and 10.

\*Excludes hexagonal rod version

PNEUMATIC ACTUATION

► Non rotating hexagonal piston rod version (from Ø 12)

Coding: 12T.Ø.stroke.VG

|   |  |
|---|--|
| T | TYPE   |
|   | 60 = Double acting version   |
|   | 71 = front spring from Ø12 (max stroke 40 mm)<br>72 = rear spring from Ø12 (max stroke 40 mm)  |
| Ø | BORE   |
|   | 8 = Ø8   |
|   | 10 = Ø10   |
|   | ...<br>50 = Ø50  |
| V | VERSION  |
|   | E = with non magnetic piston   |
|   | AE = version with non-rotating hexagonal rod, with cushioning (from Ø16)   |
|   | ME = Hexagonal piston rod with magnetic piston (from Ø12)<br>MAE = version with non-rotating hexagonal rod, with cushioning and magnetic piston (from Ø16) |
| G | SEALS  |
|   | = NBR  |
|   | T = HNBR   |
|   | V = FPM  |

Similar overall dimensions as 1260 basic type, it differs because of the hexagonal rod (instead of circular) to avoid the rotation. It is particularly suitable when it is used as a guide and support to the linked element. Not for use with high frequencies and long strokes. For which, whenever possible use front spring.

3

## Series 1200 Tecno-MIR

### Construction characteristics

|                |  |
|----------------|--|
| Barrel         | nylon 66 reinforced with glass fibres  |
| Fixing devices | steel painted / stainless steel AISI 304   |
| Forks          | zinc plated steel / stainless steel AISI 304   |
| Piston seals   | NBR oil-resistant rubber seal  |
| Rod seal       | PUR  |
| Pistons        | aluminium  |
| Piston rod     | C43 chromed (non magnetic piston version)<br>stainless steel (magnetic piston version) |
| End caps       | nylon 66 reinforced with glass fibres  |

### Operational characteristics

|                       |                                     |
|-----------------------|-------------------------------------|
| Fluid                 | filtered air, preferably lubricated |
| Max. working pressure | 8 bar                               |
| Working temperature   | -5 °C ... +50 °C                    |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

### Standard strokes

*Double acting version*

**Ø12:**

15 - 25 - 50 - 75 - 80 - 100 - 125 - 150 - 160 - 200 mm

**Ø16:**

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 mm

**Ø20 - Ø25:**

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 - 300 mm

On request are available strokes up to:

**Ø12:** 200 mm

**Ø16:** 250 mm

**Ø20 - Ø25:** 300 mm

### Maximum fitting torque

| Bore | Thread | Maximum torque (Nm) |
|------|--------|---------------------|
| Ø12  | M5     | 1                   |
| Ø16  | M5     | 1                   |
| Ø20  | G 1/8" | 4                   |
| Ø25  | G 1/8" | 4                   |

PNEUMATIC ACTUATION 3

**Basic version**

Coding: 1230.Ø.stroke.▼

|   |                       |
|---|-----------------------|
| Ø | BORE                  |
|   | 12 = Ø12              |
|   | 16 = Ø16              |
|   | 20 = Ø20              |
|   | 25 = Ø25              |
| ▼ | VERSION               |
|   | = non magnetic piston |
|   | M = magnetic piston   |

Standard version, fully complying with ISO standards. Can use all available mountings.

**Without rear eye version**

Coding: 1231.Ø.stroke.▼

|   |                       |
|---|-----------------------|
| Ø | BORE                  |
|   | 12 = Ø12              |
|   | 16 = Ø16              |
|   | 20 = Ø20              |
|   | 25 = Ø25              |
| ▼ | VERSION               |
|   | = non magnetic piston |
|   | M = magnetic piston   |

This version derived from standard version 1230 and not included in ISO standard. Not having a rear eye it is shorter. The inlet connection is lateral on the rear caps (like on the front caps).

**Through rod cylinder version**

Coding: 1232.Ø.stroke.▼

(1 piece)

Used to mount the cylinder on the mounting plane with the rod parallel to said plane. Use one for short strokes and two for long strokes. It is made of stamped steel, made corrosion resistant by cathophoresis treatment. Attached to the end caps by means of nuts (or lock nuts) 05.

Attention: the dimensions of microbore cylinders with threaded end covers (\*) increase of 10 mm. for microbore cylinders equipped with magnetic piston and spring return, and of 9 mm. for microbore cylinders with 10 mm. bore magnetic piston.

| 40   | = Ø40 |
| 50   | = Ø50 |

Use with the rear end cover to mount the cylinder either parallel or at a right-angle to the mounting plane. This allows the cylinder to oscillate and self-align with the linked element to the rod. This is necessary when the rod may be subject to lateral during travel.

### Operational characteristics

|                       |  |  |  |  |  |
|-----------------------|--|--|--|--|--|
| Fluid                 | filtered air, preferably lubricated  |  |  |  |  |
| Max. working pressure | 10 bar   |  |  |  |  |
| Working temperature   | -5°C ... +70°C with standard seals magnetic or non magnetic piston<br>-5°C ... +80°C with FPM seals magnetic piston<br>-5°C ... +80°C with HNBR seals magnetic piston<br>-5°C ... +120°C with HNBR seals non magnetic piston<br>-5°C ... +150°C with FPM seals non magnetic piston |  |  |  |  |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

### Standard strokes

*Double acting version*

**Ø8 - Ø10:**

15 - 25 - 50 - 75 - 80 - 100 mm

**Ø12 - Ø16:**

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 - 300 mm

**Ø20 - Ø25:**

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 - 300 - 320 - 350 - 400 mm

**Ø32:**

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 - 300 - 320 - 350 - 400 - 450 - 500 mm

On request are available strokes up to:

**Ø8 - Ø10:** 250 mm

**Ø12 - Ø16:** 700 mm

**Ø20 - Ø32:** 1000 mm

*Single acting version*

Front spring **Ø8 - Ø32:** up to stroke 50 mm

Rear spring **Ø16 - Ø32:** up to stroke 50 mm

### Minimum and maximum springs load for single acting version

| Bore          | Ø8  | Ø10 | Ø12 | Ø16 | Ø20 | Ø25  | Ø32  |
|---------------|-----|-----|-----|-----|-----|------|------|
| Min. load (N) | 2.2 | 2.2 | 4   | 7.5 | 11  | 16.5 | 23   |
| Max. load (N) | 4.2 | 4.2 | 8.7 | 21  | 22  | 30.7 | 52.5 |

PNEUMATIC ACTUATION

### Basic version

Coding: 12**T**.**Ø**.stroke.**V****G**

|          |  |
|----------|--|
| <b>T</b> | TYPE   |
|          | 80 = Double acting version   |
|          | 91 = front spring (max stroke 50 mm)<br>92 = rear spring from Ø16 (max stroke 50 mm) |
| <b>Ø</b> | BORE   |
|          | 8 = Ø8   |
|          | 10 = Ø10   |
|          | ...<br>32 = Ø32  |
| <b>V</b> | VERSION  |
|          | A = Adjustable cushioning (from Ø16)   |
|          | M = Magnetic piston<br>AM = Cushioning with magnetic piston (from Ø16)               |
| <b>G</b> | SEALS  |
|          | = NBR  |
|          | T = HNBR   |
|          | V = FPM  |

Standard version, fully compliant with ISO standards. Can use all available mountings. For single acting type, the maximum stroke is 50 mm, after which overall dimensions increase in length to an extent not proportional to the stroke (and in any case not longer than stroke 100).

### Without rear eye version

Coding: 12**T**.**Ø**.stroke.**V****G**

|          |  |
|----------|--|
| <b>T</b> | TYPE   |
|          | 81 = Double acting version   |
|          | 93 = front spring (max stroke 50 mm)<br>94 = rear spring from Ø16 (max stroke 50 mm) |
| <b>Ø</b> | BORE   |
|          | 8 = Ø8   |
|          | 10 = Ø10   |
|          | ...<br>32 = Ø32  |
| <b>V</b> | VERSION  |
|          | A = Adjustable cushioning (from Ø16)   |
|          | M = Magnetic piston<br>AM = Cushioning with magnetic piston (from Ø16)               |
| <b>G</b> | SEALS  |
|          | = NBR  |
|          | T = HNBR   |
|          | V = FPM  |

Version derived from standard version 1260 and not included in ISO standard. Not having a rear eye it is shorter. Rear inlet connection is at 90 like the front one, in line and plugged. The considerations made for the basic type 1280 apply for all single-acting types.

### Through rod cylinder version

Coding: 1282.**Ø**.stroke.**V****G**

|          |  |
|----------|--|
| <b>Ø</b> | BORE   |
|          | 8 = Ø8   |
|          | 10 = Ø10   |
|          | ...<br>32 = Ø32  |
| <b>V</b> | VERSION  |
|          | = Double acting version  |
|          | A = Adjustable cushioning (from Ø16)                                   |
|          | M = Magnetic piston<br>AM = Cushioning with magnetic piston (from Ø16) |
| <b>G</b> | SEALS  |
|          | = NBR  |
|          | T = HNBR   |
|          | V = FPM  |

This version having rods coming out from both end plates with overall dimensions, except for the rod, equal to 1280 version. This version is not suitable for Ø8 and Ø10 due to difficulty in anchoring the pistons to rods.

Table of dimensions

| Bore        | 8        | 10       | 12      | 16      | 20      | 25       | 32       |

PNEUMATIC ACTUATION

## Series 1200 Rolled end covers MIR-INOX

### Construction characteristics

|                |  |
|----------------|--|
| Barrel         | stainless steel AISI 304   |
| Fixing devices | stainless steel AISI 304   |
| Forks          | stainless steel AISI 304   |
| Piston seals   | standard: NBR Oil resistant rubber, PUR Piston rod seals<br>(FPM seals available upon request) |
| Pistons        | aluminium  |
| Piston rod     | stainless steel  |
| End caps       | stainless steel AISI 316   |

### Operational characteristics

|                       |   |
|-----------------------|---|
| Fluid                 | filtered air, preferably lubricated   |
| Max. working pressure | 10 bar  |
| Working temperature   | -5°C ... +70°C with standard seals magnetic or non magnetic piston<br>-5°C ... +80°C with FPM seals magnetic piston<br>-5°C ... +150°C with FPM seals non magnetic piston |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

### Standard strokes

*Double acting version*

**Ø16:**

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 - 300 mm

**Ø20 - Ø25:**

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 - 300 - 320 - 350 - 400 mm

**Ø32:**

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 - 300 - 320 - 350 - 400 - 450 - 500 mm

On request are available strokes up to:

**Ø16:** 700 mm

**Ø20 - Ø32:** 1000 mm

**Basic version**

Coding: 1280.Ø.stroke.VG

|   |   |
|---|---|
| Ø | BORE  |
|   | 16 = Ø16  |
|   | 20 = Ø20  |
|   | 25 = Ø25  |
| V | VERSION   |
|   | X = non-magnetic  |
|   | AX = non-magnetic version with cushions (non-adjustable cushioning) |
|   | MX = Stainless steel magnetic version                               |
| G | SEALS   |
|   | = NBR   |
|   | V = FPM   |

Standard version, fully complying with ISO standards. Can use all available mountings.

**Through rod cylinder version**

Coding: 1282.Ø.stroke.VG

|   |   |
|---|---|
| Ø | BORE  |
|   | 16 = Ø16  |
|   | 20 = Ø20  |

|----------|
| BORE     |
| 16 = Ø16 |
| 20 = Ø20 |
| 25 = Ø25 |
| 32 = Ø32 |

Used to mount by using the rear end cover to mount either parallel or at a right angle to the mounting plane. Allows the cylinder to oscillate and self-align with the linked element to the rod. Necessary to use when the rod may be subject to lateral forces during travel. Made of stamped stainless steel AISI 303.

## Series 1200, Steel line

The 12X stainless steel ISO 6432 cylinders Series are designed for corrosion resistance application such as marine, pharmaceutical and food ambiances.

The pre lubrication grease used is NSF H1 certified for food application.

Specific care has been taken during the design stages and the result is a clean profile cylinder easy to clean and free from possible residue build-up areas.

All parts in contact with the external environment are in Stainless steel 316L and the seals are available in three different compounds for different temperature applications:

NBR -5 °C ... +70 °C, PUR -30 °C ... +80 °C, FPM -5 °C ... +150 °C

The range starts from 16 bore up to 63 bore, double acting version standard or with through rod, magnetic or not magnetic piston available. The end caps are crimped onto the barrel for bore sizes 16 to 25 and screwed on the barrel from 32 to 63 bore.

Depending on the type of mounting required it is possible to choose different end caps style.

The piston is aluminium and the sensor bracket, when required is in stainless steel 316 with plastic adaptor or in plastic material. The cylinder can be fixed with the wide range of stainless steel accessories.

### Use and maintenance

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

### Standard strokes

Ø16 :

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 - 300 mm

Ø20-Ø25 :

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 - 300 - 320 - 350 - 400 mm

Ø 32 ... Ø 63 :

15 - 25 - 50 - 75 - 80 - 100 - 150 - 160 - 200 - 250 - 300 - 320 - 350 - 400 - 450 - 500 mm

The kit comprises:  
n° 1 clevis (AISI 316)  
n° 1 pin (AISI 316)  
n° 2 circlips (AISI 420)

Used to mount by using the rear end cover to mount either parallel or at a right angle to the mounting plane. Allows the cylinder to oscillate and self-align with the linked element to the rod. Necessary to use when the rod may be subject to lateral forces during travel. Made of stamped stainless steel.

|----------|
| BORE     |
| 32 = Ø32 |
| 40 = Ø40 |
| 50 = Ø50 |
| 63 = Ø63 |

The kit comprises:  
n° 1 clevis (AISI 316)  
n° 2 bushings (Technopolymer)

Used to mount by using the front end cap to mount parallel to the mounting plane. Allows the cylinder to oscillate and self-align with the linked element to the rod. Necessary to use when the rod may be subject to lateral forces during travel. Made of stamped stainless steel AISI 316.

## Series 1303-1308

They conform to CNOMO standards, fully complying with CETOP and ISO standards, with mounted fixing devices 32 to 100.

### Construction characteristics

|                     |  |
|---------------------|--|
| Cushion bushings    | aluminium  |
| Piston rod bushings | brass (Ø32, Ø40, Ø50) in aluminium with self-lubricating bearings in sinterized bronze for the remaining bores |
| Barrel              | oxidised aluminium   |
| Seals               | standard: NBR Oil resistant rubber, PUR Piston rod seals (FPM seals available upon request)                    |
| Pistons             | aluminium lathed from bar  |
| Piston rod          | C43 chromed steel, by thickness or stainless steel   |
| End caps            | solid aluminium bar up to Ø100, alloy aluminium from Ø125 to Ø200  |
| Tie rods            | steel with rolled threads  |

### Operational characteristics

|                     |   |
|---------------------|---|
| Fluid               | filtered and lubricated air - hydraulic oil (with special bushing)  |
| Pressure            | max. 12 bar (air) - 20 bar (oil)  |
| Working temperature | -5 °C ... +70 °C with 1303 ... 1308 standard seals<br>-5 °C ... +80 °C with FPM seals for 1306 ... 1308 Series (magnetic piston)<br>-5 °C ... +150 °C with FPM seals for 1303 ... 1305 Series (non magnetic piston) |

|                   |    |    |    |    |    |    |     |     |     |     |
|-------------------|----|----|----|----|----|----|-----|-----|-----|-----|
| Cushioning lenght | Ø  | 32 | 40 | 50 | 63 | 80 | 100 | 125 | 160 | 200 |
|                   | mm | 20 | 20 | 22 | 24 | 24 | 25  | 27  | 35  | 35  |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

### Standard strokes

#### Double acting version

From 0 to 150 every 25 mm; from 150 to 500 every 50 mm; from 500 to 1000 every 100 mm. (for all diameters).  
On request are available strokes up to: 2800 mm

#### Single acting version

up to stroke 50 mm.

### Minimum and maximum springs load for single acting version

|               |     |        |     |            |

► Support for solenoid valves

Coding: 1306.15  
Ø32 ... Ø100

Fixing holes for valves series:

- A = 414/2
- B = 824
- C = 828, T488, 488, 484
- D = 2400
- E = 2600
- F = Bases for ISO solenoid valves
- G = 858/2
- H = T424
- L = 888\_

This accessory allows valves or solenoid valves to mount on the side of the cylinder. Support should be anchored to the tie rods and on it either a threaded distributor can be mounted or a base upon which an ISO distributor can be mounted. Once installed the connections must be done with fittings and pipes. All of the threaded holes on the support plate are dedicated to different valves series as per attached drawing.

This type of mounting allows anchorage of the cylinder both parallel and at a right angle to the plane; the cylinder rod can oscillate and self-align as necessary. It is made of aluminium alloy and painted black.

This type of mounting allows anchorage of the cylinder both parallel and at a right angle to the plane; the cylinder rod can oscillate and self-align as necessary. It is made of aluminium alloy and painted black.

| 100 = Ø 100 |
| 125 = Ø 125 |
| 160 = Ø 160 |
| 200 = Ø 200 |

For CETOP-ISO cylinders May be used with CNOMO cylinders but is not specified in the standards

Similar to 09 clevis except for the connection, which is male rather than female. It can also be used as a counter clevis for type 10 (only CETOP - ISO). Allows mounting of cylinder at right angle to the plane of the cylinder rod.

PNEUMATIC ACTUATION

## Series 1319-1320-1321

This series of pneumatic cylinders is manufactured according to ISO 6431 standards adapted to VDMA 24562 and CNOMO/AFNOR 49003 that guarantee the interchangeability of the cylinders even without mounted anchoring.

### Construction characteristics

|                           |   |
|---------------------------|---|
| Cushion bushings          | hardened aluminium  |
| Piston rod bushings       | self-lubricating sintered bronze  |
| Barrel                    | oxidised aluminium  |
| Seals                     | standard: NBR Oil resistant rubber, PUR Piston rod and cushion seals (FPM seals available upon request)   |
| Pistons                   | vulcanized rubber block on steel core with incorporated plastoferrite permanent magnet, or without magnet for non magnetic version (plus rear spacer).          |
| Piston rod                | stainless steel or C43 chromed steel  |
| End caps                  | from Ø32 to Ø125: UNI 5079 aluminium alloy casting painted black by cataphoresis<br>from Ø160 to Ø200: UNI 3051 aluminium chilled painted black by cataphoresis |
| Cushion adjustment screws | brass   |

### Operational characteristics

|                     |  |
|---------------------|--|
| Fluid               | filtered and lubricated air  |
| Pressure            | max. 10 bar  |
| Working temperature | -5 °C ... +70 °C with standard seals (magnetic or non magnetic piston)<br>-5 °C ... +80 °C with FPM seals for 1319 and 1320 series (magnetic piston)<br>-5 °C ... +150 °C with FPM seals for 1321 series (non magnetic piston) |

|                   |    |    |    |    |    |    |     |     |     |     |
|-------------------|----|----|----|----|----|----|-----|-----|-----|-----|
| Cushioning lenght | Ø  | 32 | 40 | 50 | 63 | 80 | 100 | 125 | 160 | 200 |
|                   | mm | 28 | 32 | 32 | 40 | 44 | 50  | 55  | 55  | 55  |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

### Standard strokes (for all diameters)

#### Double acting version

from 0 to 150, every 25 mm  
over 150 up to 500, every 50 mm  
over 500 up to 1000, every 100 mm

On request are available strokes up to: 2800 mm

#### Single acting version

From 32 to 125, up to stroke 50 mm.  
On request are available strokes up to: 200 mm

### Stroke tolerance (ISO 15552)

| Bore        | Stroke              | Tolerance |
|-------------|---------------------|-----------|
| 32-40-50    | up to 500 mm        | +2<br>0   |
|             | over 500 up to 1000 | +3,2<br>0 |
| 63-80-100   | up to 500 mm        | +2,5<br>0 |
|             | over 500 up to 1000 | +4<br>0   |
| 125-160-200 | up to 500 mm        | +4<br>0   |
|             | over 500 up to 1000 | +5<br>0   |

### Minimum and maximum springs load (stroke 0 ... 50mm)

| Bore          | Ø32 | Ø40 | Ø50 - Ø63 | Ø80 - Ø100 | Ø125 |
|---------------|-----|-----|-----------|------------|------|
| Min. load (N) | 15  | 25  | 50        | 100        | 150  |
| Max. load (N) | 40  | 80  | 115       | 200        | 250  |

## Series 1348-1349-1350, Non rotating cylinders

### Construction characteristics

|                           |   |
|---------------------------|---|
| Cushion bushings          | 2011 UNI 9002/5 hardened alloy aluminium  |
| Barrel                    | UNI 9006/1 aluminium alloy square section, hardened 30 micron oxidate                         |
| Piston seals              | NBR oil-resistant rubber, PUR Piston rod and cushions   |
| Pistons                   | polyacetal resin, self-lubricated and anti-wear, with plastoferrite rings in magnetic version |
| Piston rod                | C43 chromed steel Ra = 0.2  |
| End caps                  | UNI 5079 aluminium alloy casting painted black by cataphoresis                                |
| Cushion adjustment screws | brass   |

### Operational characteristics

|                     |                             |
|---------------------|-----------------------------|
| Fluid               | filtered and lubricated air |
| Pressure            | 10 bar                      |
| Working temperature | -5 °C ... +70 °C            |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

PNEUMATIC ACTUATION

| Bore | Usable surface (square profile) cm <sup>2</sup> | Max couple on the rod (max torque) Nm | Grade precision (rest rod, without load) anti-rotation | Cushion length mm |
|------|---|---------------------------------------|--|-------------------|
| 32   | 8,31  | 0,5                                   | 12'  | 22                |
| 40   | 12,41   | 0,8                                   | 12'  | 27                |
| 50   | 18,41   | 1,1                                   | 12'  | 27                |
| 63   | 29,67   | 1,5                                   | 12'  | 32                |

### Standard strokes (for all diameters)

from 0 to 150, every 25 mm

### Other stroke for these following bores:

Ø32: 80 mm

Ø40: 80 - 160 mm

Ø50: 80 - 160 - 200 - 250 mm

Ø63: 80 - 160 - 200 - 300 - 320 mm

On request are available strokes up to: 1000 mm

### Stroke tolerance (ISO 15552)

| Bore | Stroke       | Tolerance |
|------|--------------|-----------|
| 32   | up to 320 mm | +2<br>0   |
| 40   |              |           |
| 50   |              |           |
| 63   |              |           |

### Basic version

Coding: 13V.Ø.stroke.01

|   |                                   |
|---|-----------------------------------|
| V | VERSION                           |
|   | 48 = Magnetic chromed rod         |
|   | 49 = Magnetic stainless steel rod |
| Ø | BORE                              |
|   | 32 = Ø32                          |
|   | 40 = Ø40                          |
|   | 50 = Ø50                          |
|   | 63 = Ø63                          |

This is the configuration that represents the basic cylinder according to ISO standards. It can be directly anchored on machine parts using the four threads on the end cap. For other applications see the following pages where different types of attachments shown.

Fixing holes for valves series:

- A = 414/2
- B = 824
- C = 828, T488, 488, 484
- D = 2400
- E = 2600
- F = Bases for ISO solenoid valves
- G = 858/2
- H = T424
- L = 888\_

This accessory permits to mount a valve or an electrovalve on a side of the cylinder. The plate can be fitted on the cylinder profiled barrel, and, on it, can be mounted either a threaded distributor or a base on which can be mounted an ISO distributor. Once installed the connections must be done with fittings and pipes. All of the threaded holes on the support plate are dedicated to different valves series as per attached drawing.

PNEUMATIC ACTUATION

## Series EcoPlus - High Performance

Profiled tube has two "T" slots on the three sides hosting sensors 1580.\_, MRS.\_, MHS.\_ without adaptors.

### Construction characteristics

|                           |   |
|---------------------------|---|
| Piston rod bushings       | self-lubricating sintered bronze  |
| Barrel                    | anodised aluminium alloy  |
| Seals                     | standard: NBR Oil resistant rubber, PUR Piston rod seals<br>(PUR seals available upon request)                |
| Pistons                   | acetal resin, aluminium on request  |
| Piston rod                | C43 chromed steel or stainless steel  |
| End caps                  | Series 1386 ... 1388:<br>high resistant thermoplastic material<br>Series 1396 ... 1398:<br>Die-cast aluminium |
| Cushion adjustment screws | brass   |

### Operational characteristics

|                     |  |
|---------------------|--|
| Fluid               | filtered and preferably lubricated air or not (if lubricated the lubrication must be continuous) |
| Pressure            | max 10 bar   |
| Working temperature | -5°C ... +70°C with standard seals<br>-30°C ... +80°C with PUR seals                             |

| Bore                                   | Ø  | 32 | 40 | 50 | 63 | 80 | 100 |
|--|----|----|----|----|----|----|-----|
| Cushioning lenght                      | mm | 27 | 31 | 31 | 37 | 40 | 44  |
| Cushioning lenght "K" and "PK" version | mm | 20 | 20 | 22 | 22 | 32 | 32  |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

### Standard strokes (for all diameters)

from 0 to 150, every 25 mm  
from 150 to 500, every 50 mm  
from 500 to 1000, every 100 mm  
On request are available strokes up to: 2800 mm

### Stroke tolerance (ISO 15552)

| Bore      | Stroke              | Tolerance |
|-----------|---------------------|-----------|
| 32-40-50  | up to 500 mm        | +2<br>0   |
|           | over 500 up to 1000 | +3,2<br>0 |
| 63-80-100 | up to 500 mm        | +2,5<br>0 |
|           | over 500 up to 1000 | +4<br>0   |

**Support for solenoid valves**

**Coding:** 1386.15

**Attention:** do not use ISO distributor for base mounting

Fixing holes for valves series:

- A = 414/2
- B = 824
- C = 828, T488, 488, 484
- D = 2400
- E = 2600
- = 858/2
- H = T424

This accessory permits to mount a valve or an electrovalve on a side of the cylinder. The plate can be fitted on the cylinder profiled barrel, and, on it, can be mounted either a threaded distributor or a base on which can be mounted an ISO distributor. Once installed the connections must be done with fittings and pipes. All of the threaded holes on the support plate are dedicated to different valves series as per attached drawing.

| Cushioning length                               | mm | 27 | 31 | 31 | 37 | 40 | 44  | 44  | 50  | 55  |
| Cushioning length, version with aluminum piston | mm | 20 | 20 | 22 | 22 | 32 | 32  | 44  | 50  | 55  |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**VERSIONS WITH ADDITIONAL ROD SCRAPER**

**Version with plastic rod scraper (Q)**

The pneumatic seal is manufactured using a special NBR seal material, with the rod scraper that comes in contact with the external environment made of a plastic material with a high wear resistance. The geometric shape with its excellent scraping capacity guarantees additional protection of the piston rod and nose seal against the impurities, liquids, water, and debris.

**Version with metallic rod scraper (R)**

The pneumatic seal is manufactured using a special FPM seal material with its own scraping lip with the additional rod scraper that comes into contact with the external environment made of metal. This combination of scraping lip and metal rod scraper enable these actuators to be used in particularly extreme environments.

Here are some examples:

**Aluminum foundries:** To remove the residues of alumina or fluorine compounds that are deposited on the piston rod during the preparation phase of aluminum casting.

**Automotive:** To prevent debris which has collected on the piston rod damaging the nose seal during operation especially waste produced during the welding process.

**Industrial ovens:** To eliminate cement powders or those produced during the manufacture of bricks/tiles Thanks to the high-performance nose seal and scraper protection of the piston rod, the cylinder will be protected against premature wear that you would normally experience using standard cylinders in these harsh environments.

Thanks to the high-performance nose seal and scraper protection of the piston rod, the cylinder will be protected against premature wear that you would normally experience using standard cylinders in these harsh environments.

**Low temperature version (L):** The special seals compound allows the use of the cylinders up to a temperature of -50°C. The rod scraper seal is equipped with a metallic scraper which removes ice crystals which might form at minus temperature

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

PNEUMATIC ACTUATION 3

**Standard strokes (for all diameters)**

- from 0 to 150, every 25 mm
- from 150 to 500, every 50 mm
- from 500 to 1000, every 100 mm
- On request are available strokes up to: 2800 mm

**Stroke tolerance (ISO 15552)**

| Bore        | Stroke              | Tolerance |
|-------------|---------------------|-----------|
| 32-40-50    | up to 500 mm        | +2<br>0   |
|             | over 500 up to 1000 | +3,2<br>0 |
| 63-80-100   | up to 500 mm        | +2,5<br>0 |
|             | over 500 up to 1000 | +4<br>0   |
| 125-160-200 | up to 500 mm        | +4<br>0   |
|             | over 500 up to 1000 | +5<br>0   |

On the ECOLIGHT series it is possible to use three sensor types, according to bore, as indicated below:

Sensors code **1500.\_**

**RS.\_**  
**HS.\_**

Ø32 ... Ø100 the sensor can be fixed on the three sides as indicated in the drawing, by using suitable bracket (except for Ø32 on side 2)

Ø125 ... Ø200 the sensor can be fixed on the three sides as indicated in the drawing, by using suitable bracket

| Code   | Bore | L   |
|--------|------|-----|
| 1390.A | Ø32  | 58  |
|        | Ø40  | 65  |
| 1390.B | Ø50  | 75  |
|        | Ø63  | 86  |
| 1390.C | Ø80  | 105 |
|        | Ø100 | 122 |
| 1390.D | Ø125 | 150 |
|        | Ø160 | 190 |
|        | Ø200 | 225 |

Sensors code **1580.\_**  
**MRS.\_**  
**MHS.\_**

Feeding connections side sensors slots

Sensors code **1590.\_**  
**LRS.\_**  
**LHS.\_**

**CYLINDERS - BORE SIZES Ø32 ... Ø63**

The two slots on connection side are plugged, therefore only sensor 1590 can be used. Suitable for top housing and once placed by means of its screw, it can be fixed in desired position.

**CYLINDERS - BORE SIZES Ø80**

The two top housing can be accessed from the front of the unit, once housing can be accessed from the front end cap and opposite housing from the rear end cap. It is therefore possible to use both type of sensor: 1580-1590.

**CYLINDERS - BORE SIZES Ø100 ... Ø200**  
All four housings can be accessed from the front of the unit. It is therefore possible to use both type of sensors: 1580-1590.

**Support for solenoid valves**

Coding: 1390.1

| SIZE      |
|-----------|
| 25 = Ø32  |
| 26 = Ø40  |
| 27 = Ø50  |
| 28 = Ø63  |
| 29 = Ø80  |
| 30 = Ø100 |

**Attention:** do not use ISO distributor for base mounting

Fixing holes for valves series:

- A = 488 / 484
- B = 2400
- C = T488
- D = 2600
- E = T424
- F = 888\_

This accessory permits to mount a valve or an electrovalve on a side of the cylinder. The plate can be fitted on the cylinder profiled barrel. Once installed the connections must be done with fittings and pipes. All of the threaded holes on the support plate are dedicated to different valves series as per attached drawing.

## Series Ecolight - with protective bellows

The modular bellows has the function of protecting the piston rod and piston rod nose seal on the Pneumax ECOLIGHT' cylinder range from Ø32 to Ø100 to a maximum stroke length of 1 mtr (all versions excluding cylinders fitted with the Q and R scraper seal).

It is constructed by mounting the bellows in series fixed with end plates mounted on the piston rod and front end cap.

There is also a guide washer with bushing (Sintered bronze/PTFE) placed in the middle of the bellows and guided by the piston rod to prevent the bellows sliding on the rod and to keep the orientation in line with the cylinder.

The bellows can be constructed from three different materials depending on the temperature, application or the possibility of any substance coming into contact with the cylinder.

During operation the bellows extend and retract which means the air contained within the bellows needs to be controlled, this is achieved by;

- NON CONVEYED: a series of breathers/filters on the end plate fitted to the piston rod.
- CONVEYED: a threaded connection on the end cover fitted to the cylinders front end cap.

Assembly is simple and requires a cylinder with extended rod (see ordering codes)

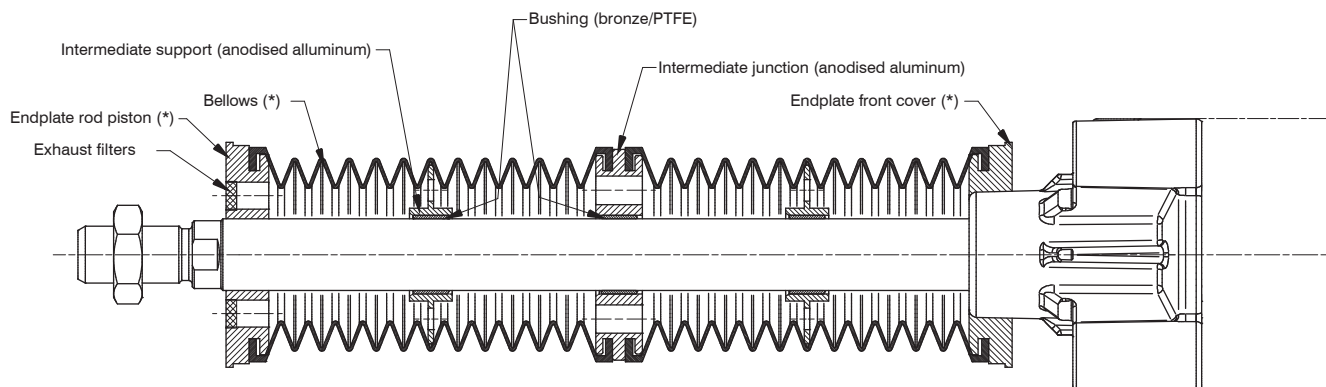

Are available:

- cylinder with bellows
- kit bellows (degrease the surface of the front cover and the piston rod before mounting the bellows terminals by interference).

### Construction characteristics

#### Version with bellows exhaust NOT CONVEYED

(\* bellows compound)

#### Version with bellows exhaust CONVEYED

(\* bellows compound)

**Notice: with cylinders Ø32 ... 63, use fitting G1/4 tube Ø10 and Ø12**  
**with cylinders Ø80 – 100, use fitting G3/8 tube Ø12 and Ø14**

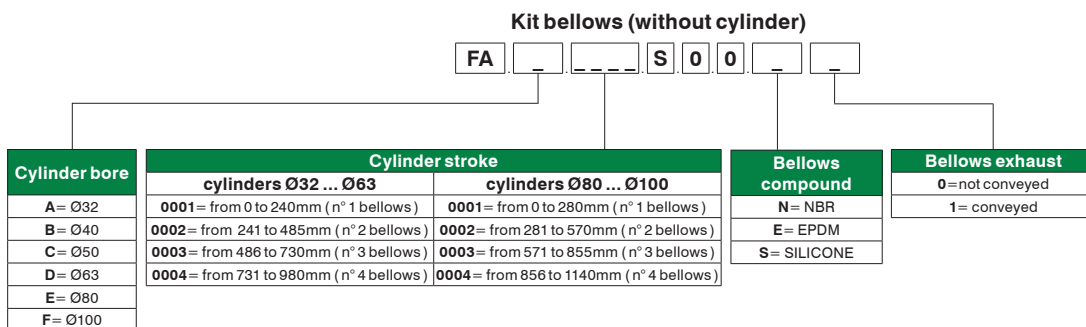

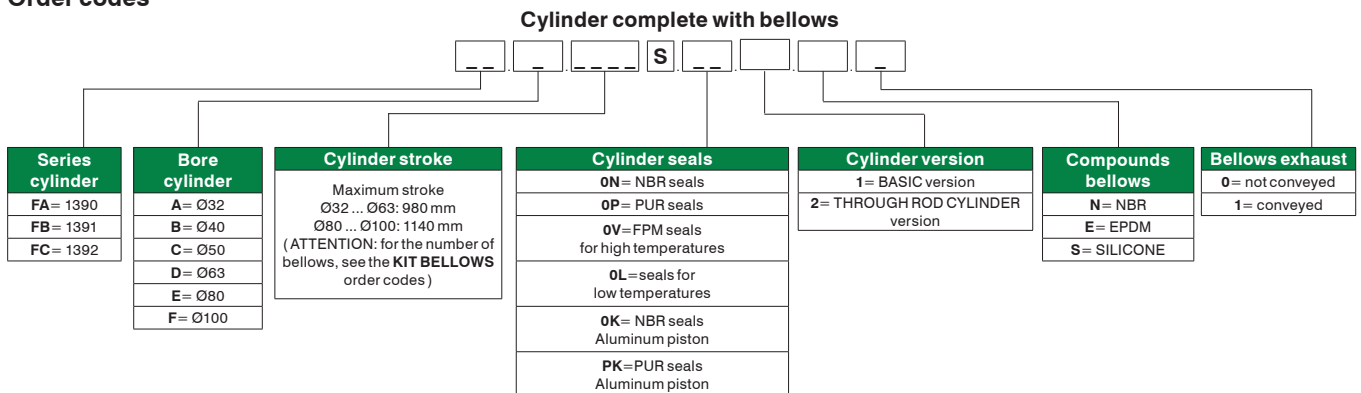

### Operational characteristics

|                          |   |
|--------------------------|---|
| Maximum Speed admissible | 1m/sec  |
| Maximum stroke           | Ø32 ... Ø63: 980mm – Ø80 ... Ø100: 1140mm   |
| Assembly                 | endplates for interference with piston rod and front cover (in the conveyed exhaust version, endplate front cover fixed with grub screws)   |
| cylinder orientation     | unconcerned   |
| EPDM (black color)       | Limit temperatures of using: -40°C/+110°C<br>Ideal for outdoor uses and water applications,<br>Excellent resistance to atmospheric agents, ozone, direct sunlight, water and steam,<br>good resistance to acids and oxygenated solvents,<br>high resistance to permanent deformations,<br>low resistance to oils, mineral greases and hydrocarbons contact.   |
| NBR (black color)        | Limit temperatures of using: -40°C/+130°C<br>Application include: aerospace, automotive, high temperature, gas and vaccum application,<br>Not adapted for external using,<br>High resistance to oils, grease, hydrocarbons, water and alcohol,<br>good resistance to air and gas impermeability.  |
| SILICONE (orange color)  | Limit temperatures of using: -60°C / +200°C<br>ideal for applications: food, clean, high temperature, atmospheric agents (ozone, water),<br>Maintenance of flexibility even at low temperatures, good elasticity,<br>excellent electro-insulating characteristics,<br>low resistance to oils, mineral greases and hydrocarbons contact,<br>not recommended for contact with ketones or concentrated acids, benzene,<br>High gas permeability. |

The temperatures indicated above refer to the material of the bellows. Therefore, the operating temperature of the assembled bellows + cylinder kit will correspond to the minimum values of the temperatures of the two components, ie those of the cylinders.

### Order codes

**Fixing device**

All ISO 15552 series ECOLIGHT cylinder fixing device/accessories and sensors available in the general catalog can be used except to:

- front clevis
- front clevis and normal foot code, not available for Ø32 cylinders in the version with not conveyed exhaust bellows.

in case of cylinder complete of bellows, for the accessories assembly on the front cover is require to take off the bellows kit. therefore, for the re-assembling, consider the dimension in preceding page about the overall dimensions.

Similar to type 08 but includes a hinge pin. This type of mounting allows anchorage of the cylinder either parallel or right angle to plane; the cylinder rod can oscillate and self-align as necessary when under load. Made of aluminium alloy or steel (see ordering code) and painted black.

Similar to 09 clevis except for the connection, which is male rather than female. Used to mount the cylinder either parallel or at a right angle to the plane; the cylinder rod can oscillate and self-align as necessary when under load. Made of aluminium alloy or steel (see ordering code) and painted black.

PNEUMATIC ACTUATION

Simple rear trunnion with support brackets (not specified by ISO-VDMA standards)

Aluminium  
Counter clevis can be ordered separately with code 1320.Ø.11/1F

Used to mount cylinders parallel to the plane to which the counter clevis is attached. Allows selfalignment of the cylinder rod under load with an oscillation up to 90 degrees from the mounting plane.

Aluminium

Mounting consists of clevis 09 and counter clevis. Used to mount cylinders at a right angle to the plane to which the counter clevis is attached. Allows self-alignment of the cylinder rod under load with an oscillation of ± 60 degrees.

Clevis to be mounted on the barrel to have the centre of rotation of the hinge pin at a point between the end caps of the cylinder. It is attached to the barrel by means of eight pointed grains that block in the "V" groove of the four protruding shapes. In the case of anchorage subject to heavy use, it is recommended to connect the clevis once the right position has been found.

**Attention:** mounting of the clevis with contact to the end caps does not allow the use of the magnetic sensors as the switch limits.

**Aluminium Intermediate Trunnion with steel bushes** to be mounted on the barrel. This solution allows the cylinder to rotate around the hinge which can be mounted in any position between the end caps. It is attached to the barrel by means of 8 grub screws which secure the Trunnion to the extruded barrel

In the case of heavy duty applications it is recommended that the Trunnion is secured using expansion pins. In case of applications with high speed, high load and high pressure please contact our technical office.

**Attention:** mounting of the clevis with contact to the end caps does not allow the use of the magnetic sensors as the switch limits.

PNEUMATIC ACTUATION

## Series 1315, Round tube cylinders

These cylinders are built according to ISO 15552.

### Construction characteristics

|                     |  |
|---------------------|--|
| Cushion bushings    | aluminium  |
| Piston rod bushings | sintered bronze  |
| Barrel              | oxidised aluminium                                       |
| Seals               | standard: NBR Oil resistant rubber, PUR Piston rod seals |
| Pistons             | aluminium  |
| Piston rod          | C43 chromed steel  |
| End caps            | aluminium alloy casting                                  |
| Tie rods            | steel with rolled threads                                |

### Operational characteristics

|                     |  |
|---------------------|--|
| Fluid               | filtered and lubricated air - hydraulic oil (with special bushing) |
| Pressure            | max. 10 bar  |
| Working temperature | -5 °C ... +70 °C   |
| Cushioning length   | 50 mm  |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

On request are available strokes up to: 2800 mm

**Basic version "01"**

Coding: 1315.Ø.stroke.01A

## Series Steel line - AISI 316

The 1393-1394 stainless steel ISO 15552 cylinders series are designed for corrosion resistance application such as marine, pharmaceutical and food ambiances.

The pre lubrication grease used is NSF H1 certified for food application.

Specific care has been taken during the design stages and the result is a clean profile cylinder easy to clean and free from possible residue build-up areas.

All parts in contact with the external environment are in Stainless steel 316L and the seals are available in two different compounds for different temperature applications:

PUR -30°C ... +80°C FPM -5°C ... +150°C.

The range starts from 32 bore up to 100 bore , round barrel and tie rods design. Double acting version standard or with through rod, magnetic or not magnetic piston available.

The piston is aluminium and the sensor bracket, when required is in stainless steel 316.

The cylinder can be fixed via the threaded holes in the tie rod nuts or with the wide range of stainless steel accessories.

### Construction characteristics

|                     |  |
|---------------------|--|
| Piston rod bushings | Stainless steel AISI 316 with P.T.F.E. coat              |
| Barrel              | Stainless steel AISI 316                                 |
| Lubricating grease  | NSF-H1 certified grease for incidental contact with food |
| Seals               | PUR or FPM on request                                    |
| Half-pistons        | Aluminium  |
| Piston rod          | Stainless steel AISI 316                                 |
| End caps            | Stainless steel AISI 316                                 |
| Cushion screws      | Stainless steel AISI 316                                 |

### Operational characteristics

|                     |   |
|---------------------|---|
| Fluid               | filtered and preferably lubricated air or not (if lubricated the lubrication must be continuous)  |
| Pressure            | 10 bar  |
| Working temperature | -30°C ... +80°C with PUR seals<br>-5°C ... +150°C with FPM seals and non magnetic piston<br>-5°C ... +80°C with FPM seals and magnetic piston |

### Cushioning lengths

| Bore              | Ø  | 32 | 40 | 50 | 63 | 80 | 100 |
|-------------------|----|----|----|----|----|----|-----|
| Cushioning length | mm | 20 | 20 | 22 | 22 | 32 | 32  |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

### Standard strokes (for all diameters)

from 0 to 150, every 25 mm

from 150 to 500, every 50 mm

from 500 to 1000, every 100 mm

On request are available strokes up to: 2800 mm

### Stroke tolerance (ISO 15552)

| Bore      | Stroke              | Tolerance |
|-----------|---------------------|-----------|
| 32-40-50  | up to 500 mm        | +2<br>0   |
|           | over 500 up to 1000 | +3,2<br>0 |
| 63-80-100 | up to 500 mm        | +2,5<br>0 |
|           | over 500 up to 1000 | +4<br>0   |

### Rear male clevis (MP4)

Coding: 1393.Ø.09/1F

|            |          |
|------------|----------|
| Ø          | BORE     |
|            | 32 = Ø32 |
|            | 40 = Ø40 |
|            | 50 = Ø50 |
|            | 63 = Ø63 |
|            | 80 = Ø80 |
| 100 = Ø100 |          |

Similar to 09 clevis except for the connection, which is male rather than female. Used to mount the cylinder either parallel or at a right angle to the plane; the cylinder rod can oscillate and self-align as necessary when under load. Made of stainless steel AISI 316.

## Series 1500 Ecompact

These cylinders are built according to ISO 21287 standards. New barrel profile has two sensor slots on the three sides (Ø 20 and Ø 25 one slot suitable for sensors 1580.\_, MRS.\_, MHS.\_ series housing, without need for adaptors).

Versions with end stroke adjustable pneumatic cushioning are also available, allowing adjustments to deceleration and keeping the required overall dimensions according to ISO 21287.

For fixing operation is possible to use the four threaded holes on the end covers, or screws in body holes, alternatively all the fixing devices of UNITOP RU-P/6-P/7 (Ø20 and Ø25) and ISO 15552 (from Ø32 to Ø100) series.

### Construction characteristics

|                     |   |
|---------------------|---|
| Body                | anodized aluminium  |
| Piston rod bushings | sintered bronze   |
| Seals               | standard: NBR Oil resistant rubber, PUR Piston rod seals (PUR or FPM on request)  |
| Springs             | stainless steel   |
| Pistons             | from Ø20 to Ø40 acetal resin (aluminium on request), Ø50 and Ø100 aluminium (with FPM seals, aluminium piston for all standard diameters) |
| Piston rod          | from Ø 20 to Ø 25 stainless steel<br>from Ø32 to Ø100 C43 chromed (on request stainless steel)  |
| End caps            | aluminium alloy casting painted   |
| Fixing screws       | zinc plated steel   |

### Operational characteristics

|                     |   |
|---------------------|---|
| Fluid               | filtered and preferably lubricated air or not (if lubricated the lubrication must be continuous)  |
| Max. pressure       | 10 bar  |
| Working temperature | -5°C ... +70°C with standard seals (magnetic or non magnetic piston)<br>-30°C ... +80°C with PUR seals (magnetic or non magnetic piston)<br>-5°C ... +80°C with FPM seals (magnetic piston)<br>-5°C - +150°C with FPM seals (non magnetic piston) |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

### Stroke tolerance, minimum and maximum spring loads and cushioning length

| Bore (mm) | Stroke tolerance (mm) | Minimum springs load (N) | Maximum springs load (N) | Cushioning length (mm) |
|-----------|-----------------------|--------------------------|--------------------------|------------------------|
| Ø20       | + 1,5 / 0 mm          | 10,8                     | 19,6                     | /                      |

PNEUMATIC ACTUATION 3

**BASIC version double and single acting**

Ø20 and Ø25

from Ø32 to Ø63

Ø80 and Ø100

**THROUGH ROD CYLINDER version, double and single acting**

TANDEM version with opposed rods

TANDEM version opposed common rod

TANDEM version push with common rods

TANDEM version push with independent rods

Ordering code

Basic and Through rod cylinder version

- 15 . Ø .stroke. . . . .
- 1 = magnetic piston, Double acting
  - 2 = magnetic piston, Single acting with front spring
  - 3 = magnetic piston, Single acting with rear spring
  - 4 = non magnetic piston, Double acting
  - 5 = non magnetic piston, Single acting with front spring
  - 6 = non magnetic piston, Single acting with rear spring
- 01 = Basic, female threaded rod
  - 02 = Basic, male threaded rod
  - 03 = through rod, female threaded rod
  - 04 = through rod, male threaded rod
  - 05 = through rod, bored female threaded rod
  - 06 = through rod, bored male threaded rod
  - 07 = with non-rotating device
  - 08 = through rod, female threaded rod, with non-rot. device on one side \*\*\*
  - 09 = through rod, male threaded rod, with non-rot. device on one side \*\*\*
- 0 = NBR seals and C43 chromed plated rod\*
  - 1 = NBR seals and stainless steel rod (starting from bore Ø32)
  - 4 = PUR seals and C43 chromed plated rod\*
  - 5 = PUR seals and stainless steel rod (starting from bore Ø32)
  - 6 = FPM seals and C43 chromed plated rod\*
  - 7 = FPM seals and stainless steel rod (starting from bore Ø32)
- \* (Ø20 and Ø25 stainless steel)
- 4 = Non-cushioned versions (mechanical cushioning only)
  - 5 = Versions with adjustable end of stroke cushioning system (from Ø25)

\*\*\* It is possible to order the Ø20, Ø25, Ø32 and Ø40 cylinders with an aluminium piston by replacing the '0' with 'K' in the ordering code.  
Example: 1540.20.10.01.1 (Acetyl Resin Piston)  
1540.20.10.K1.1 (Aluminium Piston version)

\*\*\* for single acting version, the spring is on the anti-rotation side

TANDEM version (magnetic pistons)

- 15 . Ø .stroke. (stroke 1) . . . . .
- C = female threaded rod
  - G = male threaded rod
  - H = with through rod and female threaded rod
  - R = with through rod and male threaded rod
  - N = with non-rotating device
  - B = female threaded rod
  - F = male threaded rod
  - M = with non-rotating device
  - P = with through rod and female threaded rod
  - Q = with through rod and male threaded rod
  - D = Opposed tandem with common rod
  - A = female threaded rod
  - E = male threaded rod
  - L = with non-rotating device on both ends
- 0 = NBR seals and C43 chromed plated rod\*
  - 1 = NBR seals and stainless steel rod (starting from bore Ø32)
  - 4 = PUR seals and C43 chromed plated rod\*
  - 5 = PUR seals and stainless steel rod (starting from bore Ø32)
  - 6 = FPM seals and C43 chromed plated rod\*
  - 7 = FPM seals and stainless steel rod (starting from bore Ø32)
- \* (Ø20 and Ø25 stainless steel)
- 4 = Non-cushioned version (mechanical cushioning only)
  - 5 = Versions with adjustable end of stroke cushioning system (from Ø25)

Seals compounds scheme: **NBR** oil resistant nitrilic rubber  
**PUR**: polyurethane seals **FPM**: fluoropolymer rubber seals

Alternative fixing options

Admissible maximum radial load diagram

The diagram shows the maximum radial load **F** (in Newtons) that can be applied to the cylinder piston rod as a function of the distance **A** (in mm), based upon the standard version cylinder under static conditions.  
Important: Do not exceed the recommended values in the table as reduced life or damage to the cylinder may result.

End of stroke cushioning capacity diagram

The diagram shows, for each diameter, the safety curves relative to the maximum loads which can be moved by the cylinder in function of its speed **V**. The data has been calculated under the following test conditions: Cylinder mounted vertically with the rod pointing down, air pressure at 5 bar and with a guided load.  
Important: Do not exceed the recommended values in the table as reduced life or damage to the cylinder may result.

## Series 1200 - Special performance microbore cylinders

These microbore cylinders are not subject to a standard; they are single acting with a front spring, can be either hexagonal or round bodied and either completely threaded or threaded with a plain rod ending. They are available with M5 connections or with incorporated quick fittings.

### Construction characteristics

|              |                            |
|--------------|----------------------------|
| Body         | brass                      |
| Rod bushing  | brass                      |
| Seals        | NBR                        |
| Springs      | stainless steel            |
| Rod / piston | stainless steel (AISI 303) |

### Operational characteristics

|                     |  |
|---------------------|--|
| Fluid               | Filtered air. No lubrication needed, if applied it shall be continuous |
| Pressure            | 3 ... 7 bar  |
| Working temperature | -5 °C ... +70 °C   |

Attention: air must be dried for applications with lower temperature.

### Front fixing microbore cylinders

Coding: 1273.4.10

## Series 1325-1326-1345-1347 - Twin rod cylinders

### Construction characteristics

|                           |   |
|---------------------------|---|
| Other seals               | NBR 80 shore rubber   |
| Cushion bushings          | hardened aluminium  |
| Barrel                    | RA=0.3-0.5 anodised aluminium   |
| Flange                    | zinc plated steel   |
| Rod seal                  | PUR   |
| Pistons                   | vulcanized rubber block on steel core with incorporated permanent magnet, or without magnet for non magnetic version (plus spacer). |
| Piston rod                | C43 chromed steel or stainless steel  |
| Front cap                 | oxidised aluminium  |
| Rear cap                  | UNI 5079 aluminium alloy casting  |
| Cushion adjustment screws | nickel plated steel   |

### Operational characteristics

|                     |                             |
|---------------------|-----------------------------|
| Fluid               | filtered and lubricated air |
| Pressure            | 10 bar                      |
| Working temperature | -5 °C ... +70 °C            |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

### Cushioning lengths

| Bore         | Ø  | 32 | 40 | 50 | 63 | 80 | 100 |
|--------------|----|----|----|----|----|----|-----|

► Support for solenoid valves

Coding: 1320. **T**

|                      |
|----------------------|
| SIZE                 |
| <b>15</b> = Ø32-Ø40  |
| <b>16</b> = Ø50-Ø63  |
| <b>17</b> = Ø80-Ø100 |

Fixing holes for valves series:

- A = 414/2
- B = 824
- C = 828, T488, 488, 484
- D = 2400
- E = 2600
- F = Bases for ISO solenoid valves
- G = 858/2
- H = T424
- L = 888

This accessory permits to mount a valve or an electrovalve on a side of the cylinder. The plate can be fitted on the cylinder profiled barrel, and, on it, can be mounted either a threaded distributor or a base on which can be mounted an ISO distributor. Once installed the connections must be done with fittings and pipes. All of the threaded holes on the support plate are dedicated to different valves series as per attached drawing.

► Bases for ISO solenoid valves

Coding: 1320. **N**

|                  |
|------------------|
| STANDARDS        |
| <b>21</b> = ISO1 |
| <b>22</b> = ISO2 |

|                           | Dimensions |    |    |        |
|---------------------------|------------|----|----|--------|
| Bases for solenoid valves | A          | B  | C  | D      |
| ISO 1                     | 40         | 75 | 15 | G 1/8" |
| ISO 2                     | 50         | 95 | 20 | G 1/4" |

All of the attachments of the ISO 15552 can be mounted, with the exclusion of the front flange and the foot mounting bracket that, although they are part of the same series, need a small adjustment in the exit zone of the rods. For these there is a different code and the dimensions are indicated below.

### Threaded Nipple

PNEUMATIC ACTUATION

## Series ECOFLAT

Profiled tube has two "T" slots on the side hosting sensors 1580.\_, MRS.\_, MHS.\_ without adaptors.  
Two additional connections are also available on rear cap for cylinder feeding

### Construction characteristics

|                  |                                      |
|------------------|--------------------------------------|
| Barrel           | aluminium alloy anodised             |
| Piston seals     | PUR                                  |
| Piston rod seals | PUR (FPM upon request)               |
| Shock absorber   | NBR                                  |
| Pistons          | acetal resin, aluminium on request   |
| Piston rod       | C43 chromed steel or stainless steel |
| End caps         | anodized aluminium                   |
| Fixing screws    | zinc plated steel                    |

### Operational characteristics

|                     |   |
|---------------------|---|
| Fluid               | filtered and lubricated air or not (if lubricated the lubrication must be continuous) |
| Pressure            | 10 bar  |
| Working temperature | -5 °C ... +70 °C  |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

### Maximum standard strokes

Size 25: 200 mm

Size 32 ... 63: 300 mm

On request are available strokes up to: 500 mm

### Sections (cm<sup>2</sup>)

| Size                          | 25   | 32   | 40    | 50    | 63    |
|-------------------------------|------|------|-------|-------|-------|
| Out stroke (cm <sup>2</sup> ) | 5,28 | 8,09 | 13,09 | 20,28 | 32,68 |
| In stroke (cm <sup>2</sup> )  | 4,49 | 6,96 | 11,08 | 17,14 | 29,54 |

In order to calculate the theoretical force generated by the unit, both outstroke and instroke, it is necessary to use the following equation:

$$\text{FORCE(Kg)} = \text{Surface (cm}^2\text{)} \times \text{Pressure(bar)}$$

It is also necessary to remember that the theoretical force must be reduced by 10-15% in order to account for the unit internal friction.

### Maximum rod radial movement (°)

| Size                | 25   | 32   | 40   | 50   | 63   |
|---------------------|------|------|------|------|------|
| rod radial movement | ±0.8 | ±0.7 | ±0.6 | ±0.5 | ±0.4 |

### Maximum torque applicable on the piston rod (Nm)

| Size           | 25  | 32 | 40  | 50  | 63  |
|----------------|-----|----|-----|-----|-----|
| Maximum torque | 0,8 | 1  | 1,3 | 1,8 | 2,1 |

The maximum torque values must also be accounted for while mounting accessories on the piston rod.

To be used in conjunction with 09/1 clevis. Similar to type 08 but includes a hinge pin. This type of mounting allows anchorage of the cylinder either parallel or right angle to plane; the cylinder rod can oscillate and selfalign as necessary when under load. Manufactured from sheet metal with rust proof protective treatment.

PNEUMATIC ACTUATION

## Series 1400 - Ø40 - Ø63

The SKIP and STOP valves are pneumatically actuated 2 ways poppet valves.  
The SKIP valve (accelerating device) is normally open and is equipped with a supplementary regulator for maximum speed control; it must be activated to obtain speed regulation.  
The STOP valve can be normally closed or normally open.

### Construction characteristics

|                      |   |
|----------------------|---|
| Bore                 | 40 mm and 63 mm diameter  |
| Barrel               | bright painted drawn steel  |
| Regulators group     | brass   |
| Waterproof seals     | NBR rubber  |
| Piston seals         | FPM   |
| Rod seal             | PUR   |
| Circuit oil          | hydraulic with viscosity 2.9° E at 50°C (viscosity index minimum 118) |
| Pistons              | aluminium   |
| Piston rod           | C43 chromed steel   |
| End caps             | black anodised aluminium  |
| Tie rods             | zinc plated steel   |
| SKIP and STOP valves | black anodised aluminium  |

### Operational characteristics

|  |                             |
|--|-----------------------------|
| Max connecting load  | 600 kg (Ø40) -1200 Kg (Ø63) |
| Working temperature  | -5 °C ... +70 °C            |
| Min. and max. speed  | 60 ... 10000 mm/min.        |
| Minimum pressure for the actuation of SKIP and STOP valves | 4 bar                       |

**Attention:** air must be dried for applications with lower temperature.

### Standard strokes

50 - 75 - 100 - 150 - 200 - 250 - 300 - 350 - 400 - 450 - 500 mm  
For minimum strokes see different types.  
On request are available strokes up to: 1300 mm

### Operation instructions

**Important:** If the hydraulic regulator is mounted parallelly with a pneumatic actuator, to avoid the bending moment on the rod generated when the stroke is adjusted or when the stop is engaged, it is recommended to guide and support the load to be moved.  
The limit pressure is indicated below, based on the size of the pneumatic actuator, above which it is recommended to guide and support the load:

| Cylinder    | Limit pressure (bar)              |
|-------------|-----------------------------------|
| Ø40 and Ø50 | 10                                |
| Ø63         | 5                                 |
| Ø80         | 2                                 |
| Over Ø100   | always guide and support the load |

### Maintenance

The speed control check is a closed system and there are no external factors that can adversely affect its function.  
Care however, has to be exercised not to allow the hydraulic fluid level to drop below the minimum indicated on the auxiliary tank. Should this occur, cavitation, or worse, an air pocket would result causing erratic control.  
Additional fluid should be put in exclusively through a unidirectional valve by means of an appropriate syringe (such as our code number 1400.99.01). Excess fluid will be expelled through a vent into an appropriate container. It is necessary to completely disassemble the regulator and be sure to bleed the system to eliminate air pockets.  
We suggest that you create a vacuum before beginning to refill.  
This can be done with a small unidirectional valve turned up and repeatedly loaded with a syringe. The rod must be manually actuated successively releasing air through the valve using a small and pointed instrument.

PNEUMATIC ACTUATION

► Hydraulic fluid refill syringe

Coding: 1400.99.02

Weight 420 g

► Oil for hydraulic and pneumatic circuits

Coding: PNEUM.OIL01

1 L bottle.

This oil is suitable to lubricate pneumatic circuits and also to refill hydraulic speed control tanks. It is completely compatible with our seals.

## Series 1500 - Short stroke cylinders

Profiled tube has three "T" slots on the three sides hosting sensors 1500.\_, RS.\_, HS.\_ without adaptors and with adaptor code 1380.01F codes 1580.\_, MRS.\_, MHS.\_.

A complete range of clamps makes them easy to install under any conditions.

It is interesting to note that as these cylinders (from Ø32 to Ø100) have anchoring holes with the same lead and thread as those of series 1320 ISO 6431, they accept all mountings except for the intermediate trunnion.

### Construction characteristics

|                    |  |
|--------------------|--|
| Body               | oxidised aluminium   |
| Piston rod bushing | oxidised aluminium   |
| Bottom plates      | oxidised aluminium   |
| Seals              | standard: NBR Oil resistant rubber, PUR Piston rod seals<br>(HNBR or FPM seals available upon request) |
| Pistons            | aluminium  |
| Piston rod         | C43 chromed steel (stainless steel for magnetic cylinder Ø20 and Ø25)                                  |

### Operational characteristics

|                     |  |
|---------------------|--|
| Fluid               | filtered air, preferably lubricated  |
| Pressure            | 10 bar   |
| Working temperature | -5°C ... +70°C with standard seals magnetic or non magnetic piston<br>-5°C ... +80°C with FPM seals magnetic piston<br>-5°C ... +80°C with HNBR seals magnetic piston<br>-5°C ... +120°C with HNBR seals non magnetic piston<br>-5°C ... +150°C with FPM seals non magnetic piston |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

### Standard strokes

#### Double acting version

**Series 1501, 1504, 1511, 1514, 1515, 1516, 1517 and 1518:**  
for all bores from 5 to 50 mm every 5 mm.

Maximum suggested strokes:

**Ø20-Ø25:** up to stroke 250 mm

**Ø32-Ø40:** up to stroke 300 mm

**Ø50-Ø63:** up to stroke 350 mm

**Ø80-Ø100:** up to stroke 400 mm

for strokes longer than 50 mm, please get in touch with our area sales rep.

#### Series with non-rotating device:

**Ø20-Ø25:** from 5 to 40 mm every 5 mm

**Ø32-Ø40:** from 5 to 50 mm every 5 mm

**Ø50-Ø63:** from 5 to 60 mm every 5 mm

**Ø80-Ø100:** from 5 to 80 mm every 5 mm

For longer strokes, please get in touch with the area sales rep.

#### Single acting version

**Serie 1502, 1503, 1512 and 1513:**

for all bores from 5 to 10 mm.

for strokes longer than 10 mm, please get in touch with our area sales rep.

### Minimum and maximum springs load for single acting version

| Bore          | 20   | 25  | 32   | 40   | 50 | 63 | 80-100 |
|---------------|------|-----|------|------|----|----|--------|
| Min. load (N) | 8.5  | 9.5 | 34   | 34   | 49 | 54 | 110    |
| Max. load (N) | 14.5 | 26  | 59.5 | 63.5 | 79 | 85 | 137    |

Fitted on the female thread of the compact cylinders, restore the ISO configurations rod (ISO 6432 for cylinders Ø20 and Ø25; ISO 6431 for cylinders from Ø32 to Ø100).

PNEUMATIC ACTUATION

## Series 1500 Europe

This series of cylinders is available in two versions with different threaded fixing holes. The first one includes cylinders from Ø32 to Ø100 called "ISO" with fixing holes same as cylinders ISO 6431 - VDMA 24562. Cylinders from Ø20 to Ø100 called "UNITOP", parts of second series, are mainly according to standard UNITOP RU - P/6 - P/7. Cylinders Ø12 and Ø16 non standard, are interchangeable with similar products available on the market. The ISO version uses all fixing devices of series 1320 with exception of intermediate trunnion, while for cylinders Ø12, Ø16 and for "UNITOP" version are available fixing devices as flanges, foot, male and female clevis made with aluminium or steel. For use of magnetic sensors see directions on next page.

### Construction characteristics

|                     |   |
|---------------------|---|

| Fluid                 | Filtered and lubricated air or non   |
| Max. working pressure | 10 bar   |
| Working temperature   | -30°C ... +80°C with standard seals (magnetic or non magnetic piston)<br>-5°C ... +80°C with HNBR seals (magnetic piston)<br>-5°C ... +120°C with HNBR seals (non magnetic piston) |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

\*Cylinders with longer strokes than those in the chart are also available.

The end user is responsible for the load applied on the product and for its correct use.

For special applications, please get in touch with our sales rep.

\*\*Cylinders with longer strokes than those in the chart are also available, exceptionally for applications without twisting moments and/or radial loads on the anti-rotation device.

### Minimum and maximum springs load

| Bore          | Ø12  | Ø16  | Ø20  | Ø25  | Ø32  | Ø40  | Ø50  | Ø63  | Ø80  | Ø100  |
|---------------|------|------|------|------|------|------|------|------|------|-------|
| Min. load (N) | 3,9  | 7,2  | 7,8  | 9,8  | 12,3 | 16,7 | 27,5 | 37,3 | 59,4 | 101,3 |
| Max. load (N) | 12,7 | 37,2 | 20,6 | 25,5 | 34,3 | 44,1 | 51,0 | 63,8 | 99,4 | 141,9 |

**BASIC version double and single acting**

for bores from Ø12 to Ø25 use sensors codes  
1580\_ , MHS\_ , MRS\_ only

for bores from Ø32 to Ø50 use sensors codes  
1500\_ , RS\_ , HS\_ (slot A) 1580\_ , MHS\_ , MRS\_ (slot B and slot A with adapter code 1380.01F)

for bores from Ø63 to Ø100 use sensors codes  
1500\_ , RS\_ , HS\_ and 1580\_ , MHS\_ , MRS\_ (with adapter code 1380.01F)

3

PNEUMATIC ACTUATION

**Through rod cylinder version, double and single acting**

**Tandem with opposed rods**

**Tandem push with common rods**

Opposed tandem with common rods

Tandem push with independent rods

This type of mounting allows anchorage of the cylinder both parallel and at the right angle to the plane. The cylinder rod can oscillate and self-align to the connected load. It's made with aluminium alloy black painted or with zinc plated steel (from Ø20).

This type of mounting allows anchorage of the cylinder both parallel and at the right angle to the plane. The cylinder rod can oscillate and self-align to the connected load. It's made with aluminium alloy black painted or with zinc plated steel.

| Weight (g) | 2   | 2   | 3   | 4   | 5   | 6   |

**Sensor adapter (Series SR)**

Coding: 1380.01F

Nylon accessory for sensor mounting 1580.\_, MRS.\_, MHS.\_ in grooves "A" shape.

Weight 1 g

**Sensor adapter (Series SQ-SU)**

Coding: 1500.22F

Aluminium accessory for sensor mounting square section in grooves "A" shape.

Weight 4 g

3 PNEUMATIC ACTUATION

## Series 1500 Ecompact-S

Based on the **ECOMPACT** series with piston rods and centring diameters according to ISO 15552 standard

### Construction characteristics

|                     |   |
|---------------------|---|
| Body                | anodized aluminium  |
| Piston rod bushings | spheroid bronze on steel band with P.T.F.E. coat  |
| Seals               | standard: NBR Oil resistant rubber, PUR Piston rod seals<br>(PUR or FPM on request)   |
| Springs             | stainless steel   |
| Pistons             | Ø32 and Ø40 acetal resin (aluminium on request)<br>Ø50 and Ø63 aluminium<br>(with FPM seals, aluminium for all of standard diameters) |
| Piston rod          | C43 chromed steel (on request stainless steel)  |
| End caps            | aluminium alloy casting painted with brass centring bearing   |
| Fixing screws       | zinc plated steel   |

### Operational characteristics

|                     |   |
|---------------------|---|
| Fluid               | filtered and preferably lubricated air or not (if lubricated the lubrication must be continuous)  |
| Max. pressure       | 10 bar  |
| Working temperature | -5°C ... +70°C with standard seals (magnetic or non magnetic piston)<br>-30°C ... +80°C with PUR seals (magnetic or non magnetic piston)<br>-5°C ... +80°C with FPM seals (magnetic piston)<br>-5°C - +150°C with FPM seals (non magnetic piston) |

### Use and maintenance

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

### Stroke tolerance, minimum and maximum spring loads and cushioning length

| Bore (mm) | Stroke tolerance (mm) | Minimum springs load (N) | Maximum springs load (N) | Cushioning length (mm) |
|-----------|-----------------------|--------------------------|--------------------------|------------------------|
| Ø32       | + 2 / 0 mm            | 19,6                     | 25,5                     | 6,5                    |
| Ø40       |                       | 25,5                     | 42,2                     | 8                      |
| Ø50       |                       | 44,1                     | 96,3                     | 7,5                    |
| Ø63       | + 2,5 / 0 mm          | 44,1                     | 96,3                     | 7,5                    |

**Standard strokes**

**DOUBLE ACTING BASIC version and THROUGH ROD CYLINDER version**

Cylinders with longer strokes than those in the chart are also available.  
The end user is responsible for the load applied on the product and for its correct use.  
For special applications, please get in touch with our sales rep.

**DOUBLE ACTING THROUGH ROD CYLINDER BORED version**

Cylinders with longer strokes than those in the chart are also available.  
The end user is responsible for the load applied on the product and for its correct use.  
For special applications, please get in touch with our sales rep.

### Ordering codes

15 .Ø.stroke.

- 0= NBR seals and C43 chromed plated rod
- 1= NBR seals and stainless steel rod
- 4= PUR seals and C43 chromed plated rod
- 5= PUR seals and stainless steel rod
- 6= FPM seals and C43 chromed plated rod
- 7= FPM seals and stainless steel rod

4= Non-cushioned version  
(mechanical cushioning only)

5= Versions with adjustable end  
of stroke cushioning system

- 1= Double acting, magnetic piston
- 4= Double acting, non magnetic piston

- 10= Basic, female threaded rod
- 11= Basic, male threaded rod
- 12= Through rod, female threaded rods
- 13= Through rod, male threaded rods
- 14= Through rod, bored female threaded rods
- 15= Through rod, bored male threaded rods

\* it is possible to order the Ø32 and Ø40 cylinders with an aluminium piston by replacing the '1' with '2' in the ordering code  
Example: 1540.32.10.10.1 (acetyl resin piston)  
1540.32.10.20.1 (aluminium piston version)

#### Seals compounds scheme

**NBR:** Oil resistant nitrilic rubber seals

**PUR:** Polyurethane seals

**FPM:** Fluoropolymer rubber seals

### Admissible maximum radial load diagram

The diagram shows the maximum Radial load  $F$  (in Newtons) that can be applied to the cylinder piston rod as a function of the distance  $A$  (in mm); based upon the standard version cylinder under static conditions  
 Important: Do not exceed the recommended values in the table as reduced life or damage to the cylinder may result.

### End of stroke cushioning capacity diagram

The diagram shows, for each diameter, the safety curves relative to the maximum loads  $F$  which can be moved by the cylinder in function of its speed  $V$ . The data has been calculated under the following test conditions: Cylinder mounted vertically with the rod pointing down, air pressure at 5 bar and with a guided load.  
 Important: Do not exceed the recommended values in the table as reduced life or damage to the cylinder may result.

## Series 6500

### Construction characteristics

|                     |                          |
|---------------------|--------------------------|
| Body                | anodized aluminium       |
| Piston rod bushings | sintered bronze          |
| Rear end cap        | anodized aluminium       |
| Seals               | oil resistant NBR rubber |
| Piston              | Brass                    |
| Cushioning washer   | PUR                      |
| Piston rod          | stainless steel          |

### Operational characteristics

|                          |   |
|--------------------------|---|
| Fluid                    | filtered and lubricated air or not (if lubricated the lubrication must be continuous) |
| Max. working pressure    | 7 bar   |
| Working temperature      | -5 °C ... +70 °C  |
| Minimum working pressure | 0.6 bar (for bore Ø10 - Ø16)<br>0.5 bar (for bore Ø20 - Ø25)                          |
| Cushioning               | with elastic bumper   |
| Stroke tolerance         | +1 / 0 mm   |
| Piston speed             | 50 ... 500 mm/s (without load)  |

3

### Standard strokes

| Bore | Stroke |    |    |    |    |    |    |    |

**Series 6100-6101-6110**

These guided compact cylinders, characterised by reduced overall dimensions, can be used for the compression, conveyance and manipulation of objects in many industrial sectors.

Similarly they can also be used in pushing, lifting and stopping applications.

These cylinders are available in sizes 32mm to 63 mm diameter, and comprise a single compact cylinder with integral guide rods, making it a true guide cylinder designed with installation flexibility and space saving in mind.

The rod guide is available in two styles:

**Self-lubricating bronze bushes** - useful for absorbing lateral loads and forces, especially as a stopper.

**Bearing bushes** - guaranteeing high precision and uniform movement with low friction characteristics, useful with mis-aligned loads.

Guided compact cylinders are ideal for use in applications requiring a combination of reduced dimensions and anti-rotation features.

Mounting can be achieved on three sides through holes or "T" slots.

When sensors are required, there are special slots in the barrel extrusion where 1580 series miniaturised sensors are easily fitted.

Only for bronze bushings B version

Intermediate strokes can be obtained by adding specific spacers (5, 10, 15, 20 mm).  
Example: It is possible to obtain a **6100.32.45.B** cylinder from a **6100.32.50.B** cylinder by adding a 5 mm spacer.  
The Intermediate strokes manufactured without the use of spacers are considered special executions.

|------|--------|----|----|-----|-----|-----|-----|-----|
| Bore | 25     | 50 | 75 | 100 | 125 | 150 | 175 | 200 |
| Ø80  | ●      | ●  | ●  | ●   | ●   | ●   | ●   | ●   |

Intermediate strokes can be obtained by adding specific spacers (5, 10, 15, 20 mm).

Example: It is possible to obtain a **6101.80.45.B** cylinder from a **6101.80.50.B** cylinder by adding a 5 mm spacer.

The Intermediate strokes manufactured without the use of spacers are considered special executions.

Intermediate strokes can be obtained by adding specific spacers (5, 10, 15, 20 mm).  
Example: It is possible to obtain a 6110.32.45.B cylinder from a 6110.32.50.B cylinder by adding a 5 mm spacer.  
The intermediate strokes manufactured without the use of spacers are considered special executions.

## Series 6200 and 6210

### TWIN-ROD SLIDE UNITS SERIES 6200 AND 6210

The 6200 series twin-rod linear guide units are wide cylinders used in manipulation applications and are characterised by their high force output thanks to their double piston design.

Bores range from 10mm to 32mm diameter, with sintered bronze bearings for standard applications and linear ball bearings for more rugged applications.

One major characteristic of these cylinders is the precision of their anti-rotational design, with the possibility of regulating the stroke to within 0.5mm.

When using magnetic sensors, the 1580 series sensor sits entirely within the extrusion, resulting in a smooth profile.

The liner guided units range includes , alongside the conventional two rod version with flange series 6200 , also the through rod version with twin flanges series 6210

Thanks to the twin-rod, double yoke design of the 6210 series it is possible to either fix the body and use the ends of the rods, or alternatively to fix the rod ends and use the body as the moving part.

The cylinder can be piped through the body or through the rods depending on the application.

Stroke limiting screws are fitted at either end of the stroke.

The substitution of these screws with shock absorbers makes it possible to use the cylinder on higher velocity applications (up to 500 mm/s).

Slots are provided along the edge of these units to accommodate 1580 series miniature sensors.

## Series 1605

The purpose of producing a rodless cylinder is to provide a space saving option over conventional cylinders. On a traditional rod type cylinder, the total space occupied with rod out is more than double the length of the cylinder, while with rodless cylinder it is little more than its stroke. Profiled tube allows mounting of sensors 1500.\_, RS.\_, HS.\_ and 1580.\_, MRS.\_, MHS.\_ on the two sides of carriage, by means of suitable brackets. Standard accessories include foot mounting brackets for installation on cylinder and caps, intermediate mounting brackets to give support to long stroke cylinders under load (over one metre), an oscillating coupling device for installation between the mounting plate and the load and on request, a very precise external movement device.

### Construction characteristics

|                     |   |
|---------------------|---|
| Other seals         | oil resistant NBR rubber                        |
| Bands               | tempered stainless steel                        |
| Cushion bushings    | aluminium                                       |
| Barrel              | anodized aluminium                              |
| Mounting place      | anodized aluminium                              |
| Piston seals        | special 80 shore nitril mixture, wear resistant |
| Plain bearing guide | acetal resin                                    |
| Piston              | acetal resin                                    |
| End caps            | anodized aluminium                              |

### Operational characteristics

|                     |                                     |
|---------------------|-------------------------------------|
| Fluid               | filtered and lubricated air         |
| Pressure            | 0.5 ... 8 bar                       |
| Working temperature | -5 °C ... +70 °C                    |
| Max. speed          | 1.5 m/s (normal working conditions) |
| Bores               | Ø25 - Ø32 - Ø40 - Ø50 - Ø63         |
| Max. strokes        | 6 meters                            |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- Please adequately evaluate the load involved and its direction, especially in respect to the moving carriage (also see tables for loads and admitted moments).
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

For applications where a low smooth uniform operations speed is required, you must specify this on your purchase order so that we can use the proper special grease.

### Use and maintenance

This type of cylinder, due to its characteristics, has to be used within certain criteria. Correct use will give long and troublefree operation. Filtered and lubricated compressed air reduce seal wear. Verify that the load will not produce unforeseen stresses. Never combine high speed with heavy load. Always support the long stroke cylinder with intermediate brackets and never exceed the specified working conditions. If maintenance is required, follow the instructions supplied with the repair kit.

Attention: use guided carriage for heavier loads or precise linear movements (MG or MH versions).

All reported data are referred to carriage plane and indicates MAX - values in statical conditions. These values should not be exceeded either in dynamic conditions (best speed <1m/sec).

Should the cylinder be utilised at its maximum performances, ensure the proper additional absorbers are used.

Calculation of permissible load (Kd) in dynamic conditions

$$Kd = K \cdot Cv$$

Loads under combined stressing conditions

It is important to take into consideration the following formula when there are a combination of forces with torque:

$$\left[ \left( 2 \times \frac{Ms}{Ms \max} \right) + \left( 1.5 \times \frac{Mv}{Mv \max} \right) + \frac{M}{M \max} + \frac{K}{K \max} \right] \times \frac{100}{Cv} \leq 100$$

|--------|--------|--------|---------|---------|
| 960    | 960    | 40     | 12      | 40      |

Max. load (K1 o K2) depending on the distance LC between the supports

Real load (CE) under combined stressing conditions

It is important to take into consideration the following formula when there are a combination of forces with torque:

$$CE = [K1 + K2 + (24 \times M) + (80 \times Ms) + (24 \times Mv)] \leq 960$$

Nomograph load / life

All data refers to a linear control unit properly lubricated with linear speed < of 1.5 m/s  
**Example to compute the life**

Compute the linear control unit life with a load of 100 N applied 50 mm off its axle.

$$Ms = 0,05 \times 100 = 5 \text{ Nm} \quad K1 = 100 \text{ N}$$

How to compute the real load using the formula:

$$CE = [K1 + K2 + (24 \times M) + (80 \times Ms) + (24 \times Mv)]$$

$$CE = [(100 + 0) + (24 \times 0) + (80 \times 5) + (24 \times 0)] = 500 \text{ N}$$

After having verified that the CE is lower than 960 N we realise that the life is 1150 Km from the nomograph.

### Series 1605 - Ø16

Mechanically coupled cylinder based on the stainless steel strip sealing technology widely used and tested on bigger bore sizes.

**Available versions:** sliding shoe as standard ("MH"). This system ensures high resistance and long life as the carriage which supports the weight is not tied to the piston and therefore the piston only transfers the movement without bearing any force.

**Air connections:** M5 threaded connections. All air connections on one end cap version available. (side-back-bottom side)

**Mountings:**

- foot brackets and intermediate supports if needed (depending on the stroke)
- oscillating hinge
- Directly in position via the slot on the end caps- in this conditions the air supply can come directly from the mounting plate.

**Magnetic sensors:** sensors series (1590.... , LRS.... and LHS....) can be used directly in the 2 slots on the barrel.

#### Construction characteristics

|                     |                       |
|---------------------|-----------------------|
| End caps            | anodized aluminium    |
| Barrel              | anodized aluminium    |
| Bands               | stainless steel       |
| Mounting place      | anodized aluminium    |
| Plain bearing guide | special technopolymer |
| Piston              | acetal resin          |
| Cushion bushings    | aluminium             |
| Piston seals        | special NBR           |
| Other seals         | NBR                   |

#### Operational characteristics

|                     |                                   |
|---------------------|-----------------------------------|
| Fluid               | filtered and lubricated air       |
| Working pressure    | 1.5 ... 8 bar                     |
| Working temperature | -5 °C ... +70 °C                  |
| Max. speed          | 1 m/s (normal working conditions) |
| Max. stroke         | 2,5 meters                        |
| Cushioning length   | 18 mm                             |

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- Please adequately evaluate the load involved and its direction, especially in respect to the moving carriage (also see tables for loads and admitted moments).
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

For applications where a low smooth uniform operations speed is required, you must specify this on your purchase order so that we can use the proper special grease.

#### Use and maintenance

This type of cylinder, due to its characteristics, has to be used within certain criteria. Correct use will give long and troublefree operation.

Filtered and lubricated compressed air reduce seal wear. Verify that the load will not produce unforeseen stresses. Never combine high speed with heavy load. Always support the long stroke cylinder with intermediate brackets and never exceed the specified working conditions. If maintenance is required, follow the instructions supplied with the repair kit.

3 PNEUMATIC ACTUATION

**Basic version (cylinder with plain bearing guide)**

Coding: 1605.16.stroke.Ⓜ.MH

| END COVERS |                                   |
|------------|-----------------------------------|
| 01         | = Basic version                   |
| 02         | = Left end cap-side connection    |
| 03         | = Right end cap-side connection   |
| 04         | = Left end cap-rear connection*   |
| 05         | = Right end cap-rear connection*  |
| 06         | = Left end cap-bottom connection  |
| 07         | = Right end cap-bottom connection |

\* in case of mounting with 1600.16.01F bracket, use 4mm tube fitting

Possibility of a single feed right or left cylinder head and on 3 different end cap sides

**A = forward stroke connection**  
**B = backwards stroke connection**

M5 tube Ø4 and Ø6 fittings can be used for air connections.

In case of use with 1600.16.01F mounting and REAR air connections use a 4mm pipe fitting.

**Operating end stroke decelerator diagram**

*In case of extreme applications close to the maximum allowed values in the graph it is strongly recommended to add external damping systems.*

**Recommended loads and moments in static conditions**

| K1  | K2  | K3  | M    | Ms | Mv |
|-----|-----|-----|------|----|----|
| 200 | 250 | 100 | 10   | 2  | 3  |
| (N) |     |     | (Nm) |    |    |

*Maximum Load and moments allowed in static or dynamic conditions (max. speed 0,2 m/s)*

**Magnetic sensors**

| Code    |
|---------|
| 1590... |
| LRS...  |
| LHS...  |

*The two side slots allow the direct use of 1590...LRS... and LHS... sensors mounted from the top and positioned via the built in screw.*

3 PNEUMATIC ACTUATION

**Foot**

**Coding:** 1600.16.01F  
(1 piece)

**Attention:** based on the stroke evaluate the need to use also side mounted supports. (see below)

The kit comprises:  
n° 1 foot (plated zinc steel)  
n° 2 screws (plated zinc steel)

**Intermediate support**

**Coding:** 1600.16.02F  
(1 piece)

The kit comprises:  
n° 1 support (aluminium)  
n° 2 screws (plated zinc steel)

The graph shows the LC limit in conjunction with the applied load K beyond which it is necessary to mount an intermediate side support in order to prevent the barrel from bending

**Oscillating hinge**

**Coding:** 1600.16.03F  
 (1 piece)

The kit comprises:  
 n° 2 pins (plated zinc steel)  
 n° 2 grub screw (steel)  
 n° 1 oscillating hinge (plated zinc steel)

mounting sequence:  
 mount the pin into the dedicated housing  
 tighten the blocking grub screws in the dedicated housing

3

PNEUMATIC ACTUATION

**Direct mounting without brackets**

**Coding:** 1600.16.04F  
 (1 piece)

The kit comprises:  
 n° 4 screws M3x35 (plated zinc steel)  
 n° 2 O-Rings (NBR)

**Direct mounting without brackets**

Thanks to the mounting holes with counter bores on the end caps it is possible to mount the cylinder directly onto the mounting surface. Having the end caps and barrel flush and in contact with the mounting plate it is not necessary to use any intermediate mounting brackets even in case of long strokes. It is also possible to supply air to the cylinder directly through the mounting plate through the two air connection on the bottom side of the end cap (06.MH and 07.MH) which are machined with counterbores.

## Series 1330 - 1331 - 1332 - 1333, rotary actuators

### Construction characteristics

|                                |  |
|--------------------------------|--|
| Central body                   | oxidised aluminium   |
| Cushion bushings               | hardened aluminium   |
| Barrel                         | anodised aluminium Ra=0.3-0.5  |
| Rack                           | C43  |
| Rotating angle adjustment assy | brass  |
| Seals                          | NBR 80 shore rubber  |
| Plain bearing guide            | acetal resin   |
| Pinion                         | 18 NiCrMo4 cemented and tempered   |
| Pistons                        | vulcanized rubber block on steel core with incorporated permanent magnet or without magnet plus rear spacer for non magnetic version |
| End caps                       | UNI 5079 aluminium alloy casting   |
| Cushion adjustment screws      | nickel plated steel  |

### Operational characteristics

|                                |   |
|--------------------------------|---|
| Fluid                          | filtered air, preferably lubricated         |
| Pressure                       | 10 bar                                      |
| Working temperature            | -5 °C ... +70 °C                            |
| Standard rotation              | 90° - 180° - 270° - 360°(+1°)               |
| Rotating angle adjustment assy | ±10° (±5° start position, ±5° end position) |

### Use and maintenance

Please follow the suggestions below to ensure a long life for these cylinders:

- use clean and lubricated air.
- correct alignment during assembly with regard to the applied load so as to avoid radial components or bending the rod.
- avoid high speeds together with long strokes and heavy loads: this would produce kinetic energy which the cylinder cannot absorb, especially if used as a limit stop (in this case use mechanical stop device).
- evaluate the environmental characteristics of cylinder used (high temperature, hard atmosphere, dust, humidity etc.).

**Please note: air must be dried for applications with lower temperature.**

Use hydraulic oils H class (ISO VG32) for correct continued lubrication.

|---------------|
| SIZE          |
| 15 = Ø32-Ø40  |
| 16 = Ø50-Ø63  |
| 17 = Ø80-Ø100 |

Fixing holes for valves series:

- A = 414/2
- B = 824
- C = 828, T488, 488, 484
- D = 2400
- E = 2600
- F = Bases for ISO solenoid valves
- G = 858/2
- H = T424
- L = 888\_

This accessory permits to mount a valve or an electrovalve on a side of the cylinder. The plate can be fitted on the cylinder profiled barrel, and, on it, can be mounted either a threaded distributor or a base on which can be mounted an ISO distributor. Once installed the connections must be done with fittings and pipes. All of the threaded holes on the support plate are dedicated to different valves series as per attached drawing.

PNEUMATIC ACTUATION

## Series 6400 - Double rack rotary actuators with turn table

These rotary actuators convert linear motion of a piston into a rotary motion via a rack and pinion device, using a single pinion-rack system for the 6411 version and a double system on 6400 versions. The 6410 series actuators have fixed stops at 90 and 180 degrees; while on the 6400 series, rotation can be adjusted between 0 and 190 degrees using variable stops that can also be substituted with hydraulic stoppers (shock absorbers). These devices are equipped with a rotating table upon which the load is fixed.

|                       |  |

|  | = Without adjustable rotation angle, and without sensor support |
|  | R = With adjustable rotation angle                              |
|  | S = With sensor supports  |
| T = With adjustable rotation angle and sensor supports |   |

The vane type rotary actuators, 6420 series is designed to operate at 90-180 or 270 deg. in a contained space. Dimensionally are more compact than other types of rotary actuators. The range includes bore sizes from 10 to 100 in 4 configurations:

- basic
- with adjustable rotation angle
- with sensor supports
- with adjustable rotation angle and sensor supports

The bodies are in aluminium, the shafts in chrome plated steel and the seals in NBR. The sensing support kit enables for the sensors to be positioned in any position. The rotary angle adjustment mechanism enables the adjustment of the complete rotation on bore sizes 10 to 40 while on the others sizes carries as standard hydraulic dampers which enable the adjustment only of the last part of the rotation. The units can be fixed using the thread on the body or the through holes on the body. On bore sizes 50 to 100 the shaft runs into ball bearings which ensure high resistance.

| Construction characteristics |  |
|------------------------------|--|
| Body                         | anodized aluminium   |
| Piston rod                   | steel  |
| Seals                        | NBR  |
| Vane                         | vulcanized NBR rubber on steel core                                      |

Spline position and adjustable rotation angle  $\varnothing 10 \dots \varnothing 40$   
ROTATING SHAFT KEY FLAT POSITION

ROTATION ANGLE SETUP

To regulate the rotation angle (codes 6420..R or T), follow the instructions below

Phase 1: choose the regulation configuration based on the following options (consider the actuator base position):  
rotation  $90^\circ$ , regulation  $0 \dots 90^\circ$ , rotation  $180^\circ$ , regulation  $0 \dots 180^\circ$ , rotation  $270^\circ$ , regulation  $0 \dots 175^\circ$

ROTATION CONFIGURATION

$90^\circ$

Standard version  
from  $0^\circ$  to  $90^\circ$

from  $90^\circ$  to  $0^\circ$

ROTATION CONFIGURATION

$180^\circ$

Standard version  
from  $0^\circ$  to  $180^\circ$

from  $180^\circ$  to  $0^\circ$

3 PNEUMATIC ACTUATION

Spline position and adjustable rotation angle Ø10 ... Ø40

ROTATION CONFIGURATION

270°

Standard version  
from 0° to 175°

from 110° to 270°

from 270° to 175°

from 250° to 0°

Ⓒ = Fixed screw Ⓓ = Adjusting screw

**Phase 2:** if the desired settings do not correspond to the basic version settings:

- remove screw Ⓔ and disk Ⓕ or Ⓖ (depending on the version) (see figure 1)
- remove screws Ⓒ, the actuator support Ⓐ (see figure 1) and unlock blocking screws Ⓒ and Ⓓ (see rotation configuration)
- position screws Ⓒ and Ⓓ and the key flat of rotating shaft as indicated in the chosen rotation configuration in order to align the key flat of rotating shaft (see figure 2)
- re-assemble actuator support Ⓐ, tighten screws Ⓒ
- position screws Ⓒ and Ⓓ according to the desired adjustment and tighten the screws
- re-assemble disk Ⓕ or Ⓖ and screw Ⓔ

Figure 1

Figure 2

Spline position and adjustable rotation angle Ø50 ... Ø100  
ROTATING SHAFT SPLINE POSITION

ROTATION ANGLE SETUP

The version with adjustable rotation angle (cod. 6420..R or T) is available with hydraulic shock absorbers which enable to regulate the rotation angle by 15° and to decelerate moving mass.

Example:

- 90° rotation - 15° for each deceleration = 60°
- 180° rotation - 15° for each deceleration = 150°
- 270° rotation - 15° for each deceleration = 240°

PNEUMATIC ACTUATION

**Switch positioning instructions Ø10 ... Ø40**

**Phase 1:** unfasten screw **(A)**

**Phase 2:** assemble the switch **(C)** into the dedicated housing **(B)** and lock with screw **(D)**

**Phase 3:** rotate block **(B)** in the desired position (see following image)

$\alpha$ : magnet rotating angle

$\beta$ : shaft key flat rotating angle

For correct functionality position the switch within angle  $\alpha$

**Phase 4:** tighten screw **(A)**

**Phase 5:** repeat the following phases for the second switch

**AVAILABLE SENSORS**

| Code     |
|----------|
| 1581.U   |
| TRS.U    |
| 1581.HAP |

| 1583.DC  |
| 1583.HAP |
| THR.P    |

Switch positioning instructions Ø50 ... Ø100

**Phase 1:** unfasten screw (A)

**Phase 2:** assemble the switch (C) into the dedicated housing (B) and lock with screw (D)

**Phase 3:** rotate block (B) in the desired position (see following image)

$\alpha$ : magnet rotating angle (that corresponds to the shaft key flat rotating angle)

For correct functionality position the switch within angle  $\alpha$

**Phase 4:** tighten screw (A)

**Phase 5:** repeat the following phases for the second switch

## Series 6300

Pneumatic grippers from the 6300 series are typically used in complex systems such as assembly machines, robots, manipulators etc. This series covers the wide range requirements of this sector, allowing a variety of applications. The range includes grippers equipped with holding fingers operating from  $-10^{\circ}$  to  $+30^{\circ}$  degrees, with  $180^{\circ}$  degree opening, or a parallel guided gripper with great rigidity throughout the stroke. The parallel grippers cater for larger openings (three different strokes for each diameter) with synchronised operation via a pinion-rack system with high strength thanks to a double piston mechanism. For the typical application of supplying a piece upon to a machine tool, make provision for an automatic three-pronged movement carried along by a wedge mechanism, containing the elevated force dimensions. The holding fingers can have a tolerance reference as a precise fixing device for the catching mechanism. Every type of "hand" offers different functional levels of performance at varying diameters and lengths, secondary to the application by the "fingers".

**Fingers, side fixing**

## Operating criteria

### Gripping force

**Note:** Bore selection should be made considering a holding force 10 to 20 times the component weight. In case of acceleration/deceleration a further margin of safety should be considered.

| Bore (Nm) | Ø20 | Ø25 | Ø32 | Ø40 | Ø50 |
|-----------|-----|-----|-----|-----|-----|
|           | 0,3 | 0,7 | 1,6 | 3,7 | 8,3 |

Operating criteria  
Gripping force

PNEUMATIC ACTUATION

## Series RT

The swing clamp cylinder has been developed to meet the need to clamp a workpiece by means of a clamping arm which when released would unclamp rotate 90 degrees in order to allow unrestricted access to the workpiece; the stroke of the swing movement is 21mm. They are supplied in two bore sizes Ø40 and Ø50 in magnetic or non magnetic versions. The swing clamp cylinder is available with standard clamping stroke lengths of 10, 20, 30 and 50mm with both right (R) or left (L) rotation. The following accessories are available:

- The clamp bracket can be re-positioned through 360 degree on the piston rod
- Rubber clamping tip
- Front and rear flange for fixing

**Available sensors:**

- SA series mounted directly in the groove
- SR series mounted with adapter 1380.01.F
- SQ and SU series mounted with adapter 1500.22F

(for ordering codes and characteristics see sensors section in the general catalogue)

### Construction characteristics

|            |  |
|------------|--|
| Seals      | <b>N</b> Version: PUR piston rod seals, NBR piston seals<br><b>P</b> Version: PUR piston rod seals, PUR piston seals<br><b>V</b> Version: FPM piston rod seals, FPM piston seals |
| Piston     | Aluminium  |
| Piston rod | C43 chromed steel  |
| End caps   | Aluminium  |

### Operational characteristics

|  |  |
|--|--|
| Fluid                                      | filtered and preferably lubricated air or not (if lubricated the lubrication must be continuous)   |
| Min. working pressure (bar)                | 1  |
| Max. pressure (bar)                        | 10   |
| Working temperature (°C)                   | -5 ... +70 <b>N</b> Version (magnetic or non magnetic piston)<br>-30 ... +80 <b>P</b> Version (magnetic or non magnetic piston)<br>-5 ... +80 <b>V</b> Version (magnetic piston)<br>-5 ... +150 <b>V</b> Version (non magnetic piston) |
| Stroke of rotation movement R / L 90° (mm) | 21   |
| Standard linear clamping strokes (mm)      | 10, 20, 30, 50   |
| Theoretical clamping force at 10 bar (N)   | 924 (Ø40) - 1610 (Ø50)   |

Please follow the suggestions below to ensure a long life for these cylinders:

- Use of good air quality
- Observe the application advice carefully
- Operating pressure (see clamping pressure graph)
- Translation speed ≤ 50 mm/sec.

**Swing clamp cylinder**

Fixing with through screws:  
- M5 screws (for  $\emptyset$ 40 bore)  
- M6 screws (for  $\emptyset$ 50 bore)  
**Non-magnetic screws recommended**

Fixing with non-through screws:  
- M6 screws (for  $\emptyset$ 40 bore)  
- M8 screws (for  $\emptyset$ 50 bore)

The direction of rotation is defined by the looking at the cylinder from the rod side when it retracts.

## Series SA

The limit switches of magnetic sensors must be mounted on cylinders fitted with magnetic pistons. These are activated by the magnetic field generated by the magnetic piston as it approaches and closes the circuit sending an electrical signal to either a relay, solenoid valve or converses with the electrical control system of the machine. There are both ampulla or Hall effect magnetic sensors available which are attached to the cylinder using a suitable cylinder clamp/adaptor or mounted in a suitable slot on the cylinder. The switch may also include an activation LED indicator.

Note: The magnetic sensors are in accordance with the **Directive 2014/30/EU** and following amendments

### Instruction on how to use the sensors

Particular attention needs to be paid to ensure that you do not exceed the operating characteristics shown in the following pages. Its important to note; 2 wire sensors should not be connected to the supply voltage if a load is not connected in series. Failure to do so may result in damage to the sensor. Furthermore, please consider that the 'inrush' (loading) current absorbed by the sensors might be up to 50% higher than rated.

For direct currents (DC), The polarity of the connection must be observed: The brown cable must be connected to the live (+) and the blue wire connected to the negative (-).

For all sensor applications, particular attention must be paid to the external factors such as nearby live cables, electromagnetic fields generated by electric motors as well as nearby metallic bodies as these can affect the magnetic field generated by the magnetic piston which in turn can cause malfunctions.

Electrical cables must be kept below 10mtrs in length to guarantee correct function, however, if a 10 mtr length cable is required, Pneumax suggests the inclusion of an inductor or resistor to the load to reduce the capacitive behaviour of the cable. In this instance, the customer is responsible for the selection of the correct resistive or inductive load required as Pneumax accept no responsibility for any malfunction.

If needed, 10 meters cable length can be exceeded; Pneumax suggests the use of an inductor or resistor in series to the load in order to reduce the capacitive behavior of the cable.

In this case, the customer is responsible for the selection of the inductor or resistor value. Pneumax assume no responsibility in case of malfunction.

When using a 2-wire reed type sensor, always ensure that the correct load is applied in series on any of the two wires.

When using a sensor fitted with a SNAP connector always pay attention to the orientation of the connector because by inverting the connection the circuit will not be damaged, however, the LED will not illuminate. In case 2 or more sensors need to be connected in series, pay attention to the voltage drop generated (approx 3v per sensor), in this instance, use the version designed for series connection.

Hall effect sensors are longer lasting if compare to reed switched as they do not include any moving parts.

## Series SR - SU - SQ - ST

The limit switches of magnetic sensors must be mounted on cylinders fitted with magnetic pistons. These, are activated by the magnetic field generated by the magnetic piston as it approaches and closes the circuit sending an electrical signal to either a relay, solenoid valve or converses with the electrical control system of the machine. There are both ampulla or Hall effect magnetic sensors available which are attached to the cylinder using a suitable cylinder clamp/adaptor or mounted in a suitable slot on the cylinder. The switch may also include an activation LED indicator.

Note: The magnetic sensors are in accordance with the **Directive 2014/30/EU** and following amendments

### Instruction on how to use the sensors

Particular attention needs to be paid to ensure that you do not exceed the operating characteristics shown in the following pages. Its important to note; 2 wire sensors should not be connected to the supply voltage if a load is not connected in series. Failure to do so may result in damage to the sensor. Furthermore, please consider that the 'inrush' (loading) current absorbed by the sensors might be up to 50% higher than rated.

For direct currents (DC), The polarity of the connection must be observed: The brown cable must be connected to the live (+) and the blue wire connected to the negative (-).

For all sensor applications, particular attention must be paid to the external factors such as nearby live cables, electromagnetic fields generated by electric motors as well as nearby metallic bodies as these can affect the magnetic field generated by the magnetic piston which in turn can cause malfunctions.

Electrical cable length must be kept below 10 meters in order to guarantee proper functioning.

If needed, 10 meters cable length can be exceeded; Pneumax suggests the use of an inductor or resistor in series to the load in order to reduce the capacitive behavior of the cable.

In this case, the customer is responsible for the selection of the inductor or resistor value. Pneumax assume no responsibility in case of malfunction.

When using a 2-wire reed type sensor, always ensure that the correct load is applied in series on any of the two wires.

In case two or more sensors need to be connected in series, pay attention to the voltage drop generated (around 3V for each sensor), and, in case, use the version designed for in series connection.

Hall effect sensors are longer lasting if compare to reed switched as they do not include any moving parts.

**Universal sensor with cable**

PNEUMATIC ACTUATION

## Series 1260-1320

The piston rod lock devices are clamping units mounted on the microbore cylinders front head. They allow the piston rod to lock in any position. Piston rod clamping is mechanically obtained by springs actuated purpose-made jaws. This method allows to lock the cylinder in the desired position, should the air pressure drop.  
The piston rod lock device is not a safety device.

### Construction characteristics

|               |                       |
|---------------|-----------------------|
| Body          | anodized aluminium    |
| Clamping jaws | hardened alloy copper |
| Seals         | NBR                   |
| Springs       | spring steel          |
| Pistons       | acetal resin          |
| Body          | anodized aluminium    |

### Operational characteristics

|                     |  |
|---------------------|--|
| Fluid               | filtered and lubricated air            |
| Working pressure    | 3 bar ... 6 bar                        |
| Function            | mechanical double jaws                 |
| Locking             | axial, two-direction (normally locked) |
| Unlocking           | pneumatic                              |
| Working temperature | -5 °C ... +70 °C                       |

|   |      |       |       |       |       |       |       |
|---|------|-------|-------|-------|-------|-------|-------|
| Holding force with static load<br>(microbore cylinders) | Ø12  | Ø16   | Ø20   | Ø25   | Ø32   |       |       |
|   | 180N | 180N  | 350N  | 350N  | 600N  |       |       |
| Holding force with static load<br>(cylinders)           | Ø32  | Ø40   | Ø50   | Ø63   | Ø80   | Ø100  | Ø125  |
|   | 600N | 1000N | 1400N | 2000N | 5000N | 5000N | 7000N |

Attention: Dry air must be used for application below 0°C

### Use and maintenance

Operate within the specified technical characteristics.  
The piston rod lock does not require maintenance if properly utilised.  
The working inlet port has to be pressurised for assembling the piston rod lock device on cylinder. Alternatively adjust the jaws with screw located on connection.  
Spare parts are not available.

## Series 1260 - 1320 Linear guiding units for ISO 6432 microcylinders and ISO 15552 cylinders

### Construction characteristics

|                |   |
|----------------|---|
| Body           | sintered bronze bushings : anodised aluminium<br>recirculating ball bearings guides : aluminium alloy black painted |
| Bushings       | sintered bronze or recirculating ball bearing guides  |
| Wipers         | oil resistant NBR rubber  |
| Guide rods     | sintered bronze bushings : C43 chromed steel<br>recirculating ball bearings guides : tempered and chromed steel     |
| Plate          | zinc plated steel   |
| Mounting block | zinc plated steel   |

### Loading diagram based on dimension "A"

### Use and maintenance

Follow the indication of the above diagram as far as loads are concerned. A large quantity of grease is placed between the two wipers during assembly, therefore the linear control units should not require special maintenance.

### Linear guiding units for ISO 6432 microcylinders with sintered bronze rod bushings

Coding: 1260.Ø.stroke.GLB  
(Microbore cylinders ISO 6432 must be ordered separately)

### Standard strokes

Ø20 100 - 150 - 200 mm  
 Ø25 100 - 150 - 200 - 250 mm  
 On request are available strokes up to: 1000 mm

| Weight (g) |     |
|------------|-----|
| stroke 100 | 970 |
| each 50 mm | 60  |

**Sensors and clamps:** standard sensors and clamps are used

3 PNEUMATIC ACTUATION

**Linear guiding units for ISO 15552 cylinders with sintered bronze rod bushings**

**Coding: 1320.Ø.stroke.GLB**

(Cylinders must be ordered separately)

**Standard strokes**

- Ø32 100 - 150 - 200 - 250 - 300 mm
  - Ø40 100 - 150 - 200 - 250 - 300 - 350 mm
  - Ø50 100 - 150 - 200 - 250 - 300 - 350 - 400 - 450 mm
  - Ø63 100 - 150 - 200 - 250 - 300 - 350 - 400 - 450 - 500 mm
  - Ø80 100 - 150 - 200 - 250 - 300 - 350 - 400 - 450 - 500 - 550 mm
- On request are available strokes up to: 2800 mm

|            |  | Weight (g) |      |      |      |       |
|------------|--|------------|------|------|------|-------|
| Bore       |  | 32         | 40   | 50   | 63   | 80    |
| stroke 100 |  | 1720       | 2900 | 4700 | 6000 | 11300 |
| each 50mm  |  | 91         | 159  | 159  | 250  | 380   |

**Sensor clamps and brackets for 1319-1320 series:**

Use standard sensors and brackets on the rear and following special brackets on front of cylinders for use sensors codes 1500.\_, RS.\_, HS.\_ which have the following ordering codes:  
**1320.AGL** sensor bracket for cylinders Ø32 and Ø40  
**1320.BGL** sensor bracket for cylinders Ø50 and Ø63  
**1320.CGL** sensor bracket for cylinders Ø80

PNEUMATIC ACTUATION

**Linear guiding units for ISO 15552 cylinders with recirculating ball bearings guides**

**Coding: 1320.Ø.stroke.GLC**

(Cylinders must be ordered separately)

**Standard strokes**

- Ø32 100 - 150 - 200 - 250 - 300 mm
  - Ø40 100 - 150 - 200 - 250 - 300 - 350 mm
  - Ø50 100 - 150 - 200 - 250 - 300 - 350 - 400 - 450 mm
  - Ø63 100 - 150 - 200 - 250 - 300 - 350 - 400 - 450 - 500 mm
  - Ø80 100 - 150 - 200 - 250 - 300 - 350 - 400 - 450 - 500 - 550 mm
- On request are available strokes up to: 2800 mm

|            |  | Weight (g) |      |      |      |       |
|------------|--|------------|------|------|------|-------|
| Bore       |  | 32         | 40   | 50   | 63   | 80    |
| stroke 100 |  | 3100       | 3050 | 6350 | 6200 | 15500 |
| each 50mm  |  | 246        |      | 385  |      | 455   |

**Sensor clamps and brackets for 1319-1320 series:**

Use standard sensors and brackets on the rear and following special brackets on front of cylinders for use sensors codes 1500.\_, RS.\_, HS.\_ which have the following ordering codes:  
**1320.AGL** sensor bracket for cylinders Ø32 and Ø40  
**1320.BGL** sensor bracket for cylinders Ø50 and Ø63  
**1320.CGL** sensor bracket for cylinders Ø80

## Pneumatic symbols

### Air treatment

#### Air treatment mechanisms

Pneumatic accumulator  
(capacity)

Manual air drain

Automatic air drain

Lubricator

Air filter

Filter - with manual drain

Filter - with automatic drain

#### Pressure control valves

Pressure switch

Free discharge pressure relief valve

Free discharge pilot-operated  
pressure relief valve

Sequence valve

Pressure regulator

Pressure regulator  
without exhaust valve

Pilot-operated pressure regulator  
without exhaust valve

Pressure regulator without  
exhaust valve (free)

Differential pressure regulator

#### Assembled units

Filter pressure regulator

Filter pres. reg. + lubricator  
Filter + pres. reg. + lubricator

#### Other mechanisms

Pressure gauge

Shut-off valve

Progressive start-up valve  
With Electric control

Progressive start-up valve  
With Pneumatic control

## Valves and solenoid valves

### Terms and descriptions

**The connections** to the inlet and outlets of the valves can be of two types:

**Main connections** - supply connection identified with number 1

- consumption connection identified with number 2 and 4

- exhaust connection identified with number 3 and 5

**Pilot connections** - repositioning connection on 2/2 & 3/2 ways valves identified with number 10

- switching connection on 2/2 & 3/2 ways valves and repositioning connection on 5/2 & 5/3 ways valves identified with number 12

- switching connection on 5/2 & 5/3 ways valve identified with number 14

**Switching:** is the process that changes the state of a valve from rest position to actuated position and is achieved by means of a mechanical, pneumatic or electric signal.

**Repositioning:** is the process that changes the valve state from actuated back to rest position and is achieved by means of an external mechanical (spring), pneumatic (differential) or electric signal.

**Ways:** indicated the number of connections on the valve body and on the pneumatic diagram.

**Positions:** indicates the number of positions achieved by the valve and corresponds to the number of squares on the pneumatic simple.

**Function:** indicates the valve working diagram at rest condition and corresponds to the right square in the pneumatic scheme.

### Valves symbols

| Way | Pos. | Function                      | Symbol |
|-----|------|-------------------------------|--------|
| 2   | 2    | Normally closed               |        |
| 2   | 2    | Normally open                 |        |
| 3   | 2    | Normally closed               |        |
| 3   | 2    | Normally open                 |        |
| 5   | 2    | Separated exhaust connections |        |
| 5   | 3    | Closed centres                |        |
| 5   | 3    | Open centres                  |        |
| 5   | 3    | Pressured centres             |        |

### Complementary valves

|  |  |
|--|--|
| Throttle valve                             |  |
| Bidirectional flow regulator               |  |
| Unidirectional flow regulator              |  |
| Quick exhaust valve                        |  |
| Shuttle valve                              |  |
| Silencer                                   |  |
| Non-return valve without spring            |  |
| Non-return valve with spring               |  |
| Non-return valve controlled during closing |  |
| Non-return valve controlled during opening |  |

### Switching and Repositioning

#### Mechanical

|                                |  |
|--------------------------------|--|
| Plunger                        |  |
| Sensitive plunger              |  |
| Roller                         |  |
| Unidirectional roller          |  |
| Sensitive roller               |  |
| Pedal                          |  |
| Pedal - spring return          |  |
| Push Button                    |  |
| Sensitive push button          |  |
| Push button - two positions-   |  |
| Lever                          |  |
| Lever - spring to center       |  |
| Sensitive lever                |  |
| Two position mechanical stop   |  |
| Three position mechanical stop |  |
| Spring                         |  |

#### Pneumatics

|                                 |  |
|---------------------------------|--|
| Pneumatic                       |  |
| Pneumatic -return to center     |  |
| Pneumatic - depressurised       |  |
| Differential (pneumatic spring) |  |
| Differential external pilot     |  |
| Sensitive differential          |  |

#### Electrical

|                             |  |
|-----------------------------|--|
| Solenoid                    |  |
| Bistable solenoid           |  |
| Solenoid (internal pilot)   |  |
| Solenoid (external pilot)   |  |
| Solenoid - spring to center |  |

## Valves and solenoid valves (following)

APPENDIX A

# Air quality

Compressed air is a fundamental element for the operation of various modern industrial machines. Different compressed air purity classes are required depending on its application and the industrial sector in which it is used. Generally, it must be free of pollutants (dusts, water and oil) in order to maintain the characteristics of the final product and guarantee safety. Standard ISO 8573-1:2010 specifies the permissible level of pollution for every cubic meter of compressed air. The pollutants that have been analysed are grouped in three macro-families:

- Dusts / Solid particles

Each cubic meter of compressed air could contain a maximum quantity of particles in function of its dimension.

- Water

It could be present in liquid or gaseous state.

- Oil

Each cubic meter of compressed air can contain a maximum oil quantity in any of its form: liquid, aerosol, or vapour.

To uniquely determine the purity of compressed air, it is necessary to identify a numeric value for each of the three groups of pollutants illustrated above.

In general, industrial machines require compressed air with purity class of ISO 8573-1:2010 [1:4:1] of which:

- the first number (1) refers to solid particles with maximum concentration in proportion to their size but still less than 0.1 mg/m<sup>3</sup>;
- the second number (4) refers to dried air with dewpoint temperature less than +3°C;
- The third number (1) refers to residual oil content less than 0.01 mg/m<sup>3</sup>.

For a correct operation of our devices, we require compressed air with purity class of **ISO 8573-1:2010 [7:4:4]** unless otherwise indicated.

For example, our proportional regulators require compressed air with a purity class of ISO 8573-1:2010 [1:4:1].

According to standard ISO 8573-1:2010 pollutant levels could be summarized in the following table:

| Compressed air purity classes according to ISO 8573-1:2010 |   |                     |                     |  |                           |  |   |
|--|---|---------------------|---------------------|--|---------------------------|--|---|
| Classe   | Particles   |                     |                     | Mass concentration <sup>b</sup><br>C <sub>p</sub> [mg/m <sup>3</sup> ] | Humidity and Liquid Water |  | Total Oil   |
|  | Maximum number of particles per cubic meter as a function of particle size d <sup>b</sup> |                     |                     |  | Pressure dewpoint [°C]    | Concentration of liquid water <sup>b</sup><br>C <sub>w</sub> [g/m <sup>3</sup> ] | Concentration of total oil <sup>b</sup> (liquid, aerosol and vapour) [mg/m <sup>3</sup> ] |
|  | 0,1 μm < d ≤ 0,5 μm   | 0,5 μm < d ≤ 1,0 μm | 1,0 μm < d ≤ 5,0 μm |  |                           |  |   |
| 0  | As specified by the equipment user or supplier and more stringent than Class 1            |                     |                     |  |                           |  |   |

# Dimensioning

## Flow characteristics

Each cylinder requires, in order to generate specific forces and operate at the needed speed, specific air flow through the control valve. It is therefore necessary to know and understand the laws that regulate the flow through a valve; and therefore the relation between pressure, pressure drop and flow rate. Only by doing so is it possible to determine whether a valve is capable of supplying the required flow rate to a cylinder at a given inlet pressure and with a reasonable pressure drop.

In order to carry out these analyses it is necessary to work with precise functional data; it is not sufficient to know the valve port size. This data is presented in different ways depending on the different applicable standards and various experimental measurements methods.

The figures are mainly coefficients which must be used in specific equations, with which we can estimate the valve flow rate. In order to understand the meaning of these equations it is necessary to examine the flow inside a pneumatic valve. For example, let us consider the following conditions: a valve supplied with an absolute pressure  $P_1$  and with a flow regulator connected downstream.

### Starting condition - flow regulator closed

- no flow rate ( $Q=0$ )
- Upstream and downstream pressure are identical ( $P_2=P_1$ )

### Intermediate conditions - opening flow regulator

By progressively opening the flow regulator the pressure  $P_2$  will decrease and the flow rate increase up to a critical point at which the flow rate becomes constant even if the flow regulator is opened further. This critical point corresponds to the sonic condition of the flow.

### Final condition - flow regulator completely open

- maximum flow rate (constant from critical point)
- downstream pressure  $P_2=0$

On a varying  $P_1$  the curves maintain the same form and only shift into a higher or lower flow rate area depending on whether  $P_1$  has increased or decreased. The area of interest in pneumatic valve applications is the subsonic zone, just before the critical flow point is reached. This zone is expressed in a number of different ways which average the effective flow pattern enabling simple description of the flow using experimental coefficients.

## Valve coefficients "C" and "b"

CETOP RP50P recommendation (derived from ISO 6358 standard) expresses flow rate in function of two experimental coefficients:

- conductance **C**
- critical pressure ratio **b**.

**Conductance C** =  $Q^*/P_1$  is the ratio between maximum flow rate  $Q^*$  and absolute inlet pressure  $P_1$  under sonic flow condition at a temperature of 20°C.

**Critical ratio b** =  $P^*/P_1$  is the ratio between the output absolute pressure  $P_2$  and the inlet absolute pressure  $P_1$  at which the flow becomes sonic.

The expression that represents an elliptic approximation of the relationship between pressure and flow follows:

$$Q_N = C \cdot P_1 \cdot K_t \cdot 1 - \left( \frac{r-b}{1-b} \right)^2 \quad [1]$$

where:

$Q_N$  (dm<sup>3</sup>/s) is the flow rate in dm<sup>3</sup>/s at normal condition : 1,013 bar and 20°C;

$C$  (  $\frac{dm^3}{s \cdot bar}$  ) is the valve conductance;

$P_1$  (bar) is the inlet absolute pressure;

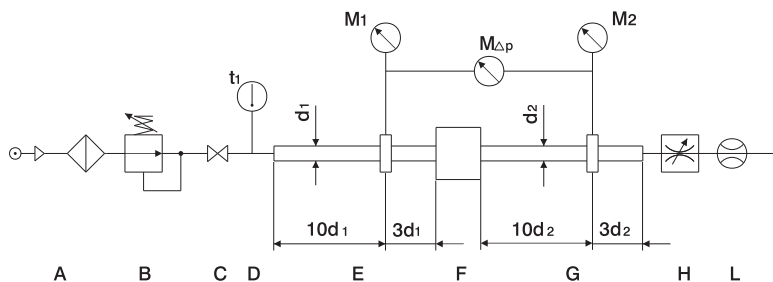

$r$  is the ratio between downstream and upstream pressure ( $P_2/P_1$ );

$b$  is the pressures critical ratio;

$kt = \sqrt{293/T_1}$  is a corrective factor that consider the absolute inlet temperature  $T_1$ ;

$T_1 = 273 + t_1$  (°K) is the absolute temperature ( $t_1$  is the temperature in °C).

The experimental determination of the valve coefficient C & b is carried out with compressed air following standardised procedures and according to the scheme below.

**CETOP test circuit**

- A Compressed air generator.
- B Pressure regulator to set upstream pressure P1.
- C Shut off valve.
- D Temperature sensor to check upstream temperature t 1, positioned in a low velocity area.
- E Pipe where the upstream pressure is measured.
- F Test valve.
- G Pipe where the downstream pressure is measured.
- H Flow regulator to adjust the downstream pressure P2.
- L Flow meter.
- M1,M2 Pressure measuring equipment for upstream and downstream.
- MΔP Pressure drop measuring equipment assuming P1-P2 < 1 bar.

Pipes E & G, used to measure the valve upstream and downstream pressure, must be sized according to the standard's specifications and change in size depending on the valve port sizes; the position of the connection at which the measurements are taken depends on the pipe's inner diameter.

Conductance C is determined with the following equation, measuring the critical flow rate Q\* through the valve, where upstream pressure P1 is constant and greater than 3 bar.

$$C = \frac{Q^*}{P_1 \cdot K_t} \quad [2]$$

Pressure critical ratio **b** can be calculated using the following equation:

$$b = 1 - \frac{\Delta P}{P_1 \left[ 1 - \sqrt{1 - \left( \frac{Q'}{Q^*} \right)^2} \right]} \quad [3]$$

Considering a given constant pressure P1 it is necessary to proceed measuring the flow rate Q' corresponding to a pressure drop ΔP = P1 - P2 = 1 bar. Equation 3 is used to calculate the critical ratio as it is difficult to experimentally identify the exact pressure P\*2 at which the flow becomes sonic. The values of both the conductance C and the critical ratio b are experimentally calculated and are the average of the results obtained.

Equation [1] is used to calculate the flow in subsonic conditions P2 > b · P1 when values C ; b and the valve working conditions (P1, P2, T1) are known. Under sonic conditions , P2 ≤ b · P1 the equation can be simplified and the maximum flow rate can be calculated as follows:

$$Q^* = C \cdot P_1 \cdot k_t \quad [4]$$

**Hydraulic coefficient Kv**

The hydraulic coefficient allows, using the equation. The calculation of the flow rate of a fluid through a valve.

$$Q = K_v \sqrt{\frac{\Delta p}{\rho}} \quad (\text{l/min}) \quad [5]$$

where:

- Q is the fluid flow rate in l/min
- Δp is the pressure drop inside the valve calculated in bar (P1 - P1)
- ρ is the fluid density calculated in Kg/dm<sup>3</sup>
- Kv is the hydraulic coefficient calculated in  $\frac{\text{l}}{\text{min}} \left( \frac{\text{kg}}{\text{dm}^3 \cdot \text{bar}} \right)^{\frac{1}{2}}$

Using these measurement units the flow rate coefficient Kv represents the flow rate (in liters) of water across the valve with a pressure drop of 1 bar. The measurement are carried out using the standardised circuit below on which the connection ports are positioned according to the pipe inner bore size (norm VDE/VDI 2173).

### Hydraulic circuit

In some cases flow rate is measured in m<sup>3</sup>/h which correspond a Kv measured

To obtain Kv expressed in  $\frac{l}{min} \left( \frac{kg}{dm^3 \cdot bar} \right)^{\frac{1}{2}}$  it is sufficient to multiply the Kv value expressed in  $\frac{m^3}{h} \left( \frac{kg}{dm^3 \cdot bar} \right)^{\frac{1}{2}}$  By the coefficient 16,66.

The coefficient kv is perfectly suitable to express the flow rate of fluids but only gives approximate values in case of compressed air. Experiences gained in hydraulic environments can be inferred in the pneumatic field, bearing in mind the difference in density, and assuming that the air flow will generate the same pressure drops and flow reductions as water. It is therefore possible to calculate reliable values for compressed air using flow coefficients Kv obtained from experiments with water.

To define the flow rate Qn through a valve at a given constant absolute inlet pressure P<sub>1</sub>, regardless of fluctuations of the downstream absolute pressure P<sub>2</sub>, refer to the equation below:

$$Q_N = 28,6 \cdot K_v \sqrt{P_2 \cdot \Delta P} \cdot \sqrt{\frac{T_n}{T_1}} \quad [6]$$

where:

Q<sub>N</sub> is the flow rate in volume l/min;

K<sub>v</sub> is the hydraulic coefficient  $\frac{l}{min} \left( \frac{kg}{dm^3 \cdot bar} \right)^{\frac{1}{2}}$

T<sub>n</sub> is the absolute reference temperature;

T<sub>1</sub> is the inlet absolute temperature in °K;

P<sub>2</sub> is the downstream absolute pressure in bar;

ΔP is the pressure drop P<sub>1</sub> - P<sub>2</sub> in bar.

Equation [6] is real up to  $\Delta P = \frac{P_1}{2}$  therefore  $P_2 = \frac{P_1}{2}$

For lower P<sub>2</sub> values the flow rate is considered to be constant, corresponding to the sonic flow rate Q\*<sub>n</sub> given by the following equation:

$$Q^*_N = 14,3 \cdot K_v \cdot P_1 \sqrt{\frac{T_n}{T_1}} \quad [7]$$

### The nominal flow rate Q<sub>Nn</sub>

The nominal flow rate is the flow volume (at normal conditions) that passes through a valve with an upstream pressure P<sub>1</sub>=6bar (7 bar absolute pressure) and a pressure drop of 1 bar, corresponding to a downstream relative pressure P<sub>2</sub> of 5bar (6 bar absolute pressure).

Normally the nominal flow rate is expressed in l/min and can be easily deduced from an experimental flow curve drawn for a upstream pressure of 6 bar (relative). Nominal flow rate can be useful for a preliminary assesment of the performances of different valves but in reality can be used only if the working conditions are the same as those mentioned before. In order to be able to compare valve characteristics which are expressed in different coefficients it is possible to use conversion equations.

Given the C and b coefficient, it is possible to determine the nominal flow rate using the following equation:

$$Q_{Nn} = 420 \cdot C \cdot \sqrt{1 - \left( \frac{0,857 - b}{1 - b} \right)^2} \quad [8]$$

where:

Q<sub>Nn</sub> is in l/min and C in  $\frac{dm^3}{s \cdot bar}$

The correlation between the hydraulic coefficient K<sub>v</sub> and the corresponding nominal flow rate is as follows:

where:

Q<sub>Nn</sub> = 66 K<sub>v</sub>

Q<sub>Nn</sub> is in l/min and K<sub>v</sub> in  $\frac{l}{min} \left( \frac{kg}{dm^3 \cdot bar} \right)^{\frac{1}{2}}$

### Conversion table

|                 |                            |                       |

\*to calculate the diameter dp (mm<sup>2</sup>) square root of dp<sup>2</sup>

### Pipes flow resistance

The C factor (l/sec) indicates the pipe flow capacity and is the ratio between the maximum flow rate and absolute pressure (ISO 6358). The flow capacity progressively decreases with increasing pipe length, due to the air friction on the pipe inner surface increasing the pressure drop. Therefore the longer the pipe the smaller the flow rate. The chart below shows the flow rate characteristics of different pipe sizes (i/d and o/d) in function of the length.

### Valve sizing

The choice of the correct size valve is essential in order to ensure that the cylinder to be controlled will perform as expected. It is therefore necessary to know the cycle time to be achieved and to calculate the coefficient T which will be used as multiplier for the air consumption value previously calculated. The result of this equation, expressed in NI/min and multiplied by a safety factor of 1.2, corresponds to the minimum flow rate needed (at standard conditions 6 bar supply and 5 bar on the consumption connection) to operate the cylinder at the required rate.

$$T = \frac{60 Qn}{\text{cycle time}} = T \times \text{Consumption}$$

It is also important to ensure that the pipes used to connect the valve to the air supply and to the cylinder do not affect the flow rate in any way. The pipe inner bore must therefore be at least 1.5 times the diameter of the valve nominal orifice size. The choice of the fittings is also very important, the inner bore must be equal or greater than the pipe I/D. The diagram below shows the flow rate required to operate different size cylinders at varying speeds and also the valve connection sizes.

### Cylinder air consumption

The air consumption corresponds to the volume of air that the cylinder uses in a complete cycle (stroke out and back in) at a specific pressure.

$$\text{Consumption} = Pa \times C \times (A + b)$$

**Pa**= Absolute pressure (bar)

**C**= Cylinder stroke (dm)

**A**= see tab. 1 (dm<sup>2</sup>)

**b**= see tab. 2 (dm<sup>2</sup>)

Air consumption is measured in Normal-liters (NI) which correspond to the volume that a specific quantity (mass) of gas would fill at atmospheric pressure.

Calculation example:

ISO 15552 cylinder - 1319 series:

Supply pressure 6 bar (Pa=7 bar)

Stroke 50mm (C=0,5 dm)

Ø63 (A=0,31157 dm<sup>2</sup>)

Rod Ø=20 mm (b=0,28017 dm<sup>2</sup>)

$$\text{Consumption} = 7 \text{ (bar)} \times 0,5 \text{ (dm)} \times (0,31157 + 0,28017) = \mathbf{2,072 \text{ NI}}$$

(In order to calculate the air consumption for a specific number of cycles it is sufficient to multiply the above value for the number of cycles)

| Piston surface area |                         |

tab.2

**Allowed axial load (combined bending and compressing load)**

This is the maximum load that can be applied axially on the rod tip. Above this value the rod might bend under compression. This value depends on a number of factors such as load size, rod diameter, the distance at which the load is applied (bending and compressing length L) and the conditions under which the load is applied (cylinder mountings). Among the possible conditions, the following three are the most common.

The maximum axial load can be calculated in two ways:

In an empirical way (see equations) or by checking the following diagram which shows the worst possible conditions (case 1 & 2) For all other possible mountings alternatives the axial load will surely be higher.

$$F_k = \frac{p^3 \times E \times d^4}{64 \times L^2 \times C} \quad (N)$$

$$d = \sqrt[4]{\frac{F_k \times 64 \times L^2 \times C}{p^3 \times E}} \quad (cm)$$

$$L = \sqrt{\frac{p^3 \times E \times d^4}{F_k \times 64 \times C}} \quad (cm)$$

**Example: Axial load verification**

Cylinder  $\varnothing 80$  mm  
Rod diameter  $\varnothing 20$  mm  
Stroke 600 mm  
Mounting CASE 2 intermediate trunnion:  $L_0=290$  mm  
Load 2000 N  
 $L$  (distance) =  $29+60=89$  cm  
 $F_k = (\pi^3 \times 2,1 \times 10^7 \times 2^4) : (64 \times 89^2 \times 5) = 4104$  N  
(Above the 2000 N applied)

The same result can be obtained using the below diagram : following the bending and compression distance line relative to 900 mm up to the intersection with the 20 mm  $\varnothing$  line we obtain 4000 N.

**Example: Rod diameter sizing**

**E** = rod material coefficient of elasticity (N/cm<sup>2</sup>)  
(steel =  $2,1 \times 10^7$  N/cm<sup>2</sup>)  
**d** = rod diameter (cm)  
**L** = bending and compression distance (cm)  
**C** = safety factor (from 2,5 to 5)

Considering the same conditions as in the above case we need to determinate the rod diameter suitable to withstand a 4000N load

$$d = \sqrt[4]{(4000 \times 64 \times 89^2 \times 5) / (p^3 \times 2,1 \times 10^7)} = 2 \text{ cm}$$

The diameter to choose is the next one up :  $\varnothing 25$  mm

Also this second example can be resolved using the below diagram: following the bending and compression distance line relative to 900mm up to the intersection with the 4000 N maximum load we obtain  $\varnothing 20$  mm.

With the third equation or using the diagram it is possible to calculate the bending and compression distance.

### End of stroke cushioning capability

The function of the end of stroke cushioning is to reduce the kinetic energy generated by movement of the load and to prevent high speed impact between the piston and end caps that could compromise the unit functionality. The use of non-cushioned cylinders is not recommended on high speed applications unless external means of deceleration (such as dampers) are used.

The maximum load that can be cushioned depends on the speed of the unit and the cylinder cushioning capacity. The chart below shows the values relative to the ISO 15552 series cylinders considering the out stroke movement and a supply pressure of 6 bar. The acceptable values for any diameter are those found below each size line.

### Cylinder sizing

In order to properly size a cylinder it is necessary to consider the following parameters:

**Force generated:** calculated in function of the piston area and of the pressure that acts upon it.

$$F = \text{area} \times \text{pressure} \quad (\text{daN}) = (\text{cm}^2) \times (\text{bar})$$

The value is theoretical and needs to be reduced by approximately 10-15% in order to compensate for the effects of friction. We must also consider that the force generated during the return stroke (traction) is lower, as the area on which the pressure acts is reduced by the presence of the rod.

**Weight of the load:** the force generated by the cylinder must be sufficient to move the load in the desired direction within the specified time (cycle time). The load ratio (RdC) must not exceed 70%.

$$\frac{\text{Needed force (load weight)}}{\text{Available force (generated)}} \times 100 = \text{RdC}$$

### Load position

**Vertical lift** (pull upwards): the real force generated by the cylinder must be sufficient to counterbalance the load and to accelerate it.

Example:

Weight to be lifted 120Kg

Working pressure 6 bar

Load ratio 70%

Using the load ratio equation it is possible to calculate the force needed to lift the load:

$$\text{Available force} = \frac{\text{Load}}{\text{Rdc}} \times 100 \quad \text{the result is } 171,4 \text{ daN}$$

A 63 bore cylinder which generates a theoretical force of 187 daN is suitable for the application.

A similar load ratio allows, using unidirectional flow regulators, good speed control.

When the speed is below 20 mm/sec. It is difficult to properly control the movement.

The load ratio must be reduced to 50% on slow speed applications. In these conditions, or where constant movement is required, the use of a hydraulic speed control unit is recommended. On applications where the load is moving downwards, thereby increasing the force generated by the actuator, it is usually necessary to use flow regulators.

**Horizontal or inclined movement:** If the load is supported and the working position is horizontal, it is necessary to multiply the needed force by the coefficient of friction.

The coefficient of friction  $m$  varies according to the material.

For example considering  $m = 0.4$

Weight to be moved 120 Kg

Pressure 6 bar

Load ratio 70%

Solving the load ratio equation it is possible to calculate the available force:

$$\text{Available force} = \frac{\text{Load}}{\text{Rdc}} \times 100 \times m \quad \text{which, in the above conditions is } 68,57 \text{ daN}$$

A Ø40 bore cylinder that generates a theoretical force of 75.4 daN is suitable for the application.

In cases of inclined application the required force increases according to the angle.

Also in these conditions it is necessary to multiply the needed force by a coefficient of friction.

| Theoretical force -Push- (N)<br>- rod moving out |                              |                        |       |        |        |        |        |        |        |        |        |
